

Information Analyst

Location: Amsterdam

APX-ENDEX is one of Europe's most experienced and fast growing energy exchanges based in Amsterdam, London and Nottingham. APX-ENDEX offers electronic trading and clearing services for electricity and natural gas in the Netherlands, the United Kingdom and Belgium for short term and futures products.

APX-ENDEX facilitates the development of liberalised and integrated energy markets in North West Europe by providing an efficient, transparent and secure electronic trading environment for the trading of electricity and natural gas. Established in 1999, the company provides market data and a range of indices for use by traders, energy suppliers and energy-intensive industries.

APX-ENDEX is looking for an Information Analyst to work in the Project Governance and Services department. The Information Analyst is responsible for the gathering of business requirements, ensuring that the requirements are valid, deliverable and aligned to overall APX-ENDEX strategy.

The Information Analyst should also ensure that the requirements are translated into an accepted solution using APX-ENDEX standard specifications and processes. In undertaking this role a good awareness of the overall aims of the business are important, and delivering these aims should be at the heart of approach to the role.

[more>>](#)

Key activities for this role:

- Pro-actively participate in the discussions during the conception of business ideas, including analysing the feasibility of proposed solutions and providing high level impact assessments of proposed solutions
- Ensure that the analysis identifies all requirements, possible implications, whether the requirements are achievable or not, and also highlight any gaps that may exist
- Design solutions that meet the requirements while staying within the given constraints and translate these solutions into functional designs
- Liaise with the relevant business stakeholders (both internal and external) about their requirements, identify their needs and manage client expectations effectively
- Critically evaluate the information gathered from multiple sources, reconcile conflicts, decompose high-level information into details, abstract up from low-level information to a more general understanding, distinguish presented user requests from the underlying true needs, and determine solution ideas from the requirements
- Produce system design and application specification documentation
- Working with the test coordinator, produce test specifications for tests based on the application specification

It is essential that the candidate has:

- Experience in database and system design, design of critical real-time systems, design of system with multiple interfaces
- Full working knowledge of APX trading and supporting systems including EuroLight, the Back Office Website, DataCapture and the Trayport Translator and Mapper tools is preferred
- Experience with Information analysis/functional design tooling
- Bachelor degree or equivalent
- Knowledge of Prince 2 (preferred)
- Fluency in Dutch and English
- Excellent communication skills (verbal and written)
- Able to work successfully on multiple projects simultaneously
- Organised, accurate with attention to detail, able to plan and prioritise workload
- Highly motivated, flexible and committed

Location

APX-ENDEX is located in the World Trade Centre, Amsterdam and has offices in London and Nottingham United Kingdom. The Company reserves the right to require you to work at these locations or any other premises occupied by the Company from time to time.
