

# UNIVERSITY OF TWENTE'S POLICY ON OPEN ACCESS TO RESEARCH RESULTS

To increase Open Access (OA) to the university's research results, authors who are affiliated with the University of Twente:

1. are stimulated to publish their research results in a high-quality OA journal that is listed in the [Directory of Open Access Journals](#).

2. are stimulated to publish their research results in one of the almost 10.000 journals that let submitting UT authors publish Open Access at a 100% discount, thanks to agreements between the Dutch universities (VSNU) and publishers. These scientific journals can be found in the [UT Journal Browser](#).

3. must upload the final pdf of all their publications to the university's [research information system](#).

This makes the university's publications sustainably available in the National Library of the Netherlands, and more visible because widely used search engines will now find them in the portal University of Twente Research Information.

4. are strongly encouraged to also upload the accepted author manuscript of their closed publications.

That is the final full-text version after changes based on peer review, but without editorial changes and the layout of the publisher. When a publication is closed, the University Library is only allowed to make this version openly available, possibly after an embargo period.

*Open Access is essential for the University of Twente.  
It lets society benefit from our scientific knowledge.*

—Prof. Dr. Thom Palstra, rector magnificus University of Twente
