

Newsletter Mobility-Online – No. 04 – September 2022

Welcome back! The campus is alive again, the first leaves are starting to change colours and the first weeks of the academic year 2022/2023 have already flown by.

Roadmap - optimisation project

Updates on the optimisation project.

(1) The implementation of the staff mobility pipeline means that starting in Q4 2022, any teaching or training trips from staff members is to be registered in Mobility-Online. You can register your upcoming activity using an online form. There will also be placed a manual for this registration procedure on our website. An email stating the link to the website and registration form will be distributed to all staff members along with additional information regarding the process once the pipeline is ready to use.

(2) What is the internationalization portal? It is a digital representation of all the UT exchange partners where students can go and gather information. The available filters will help the students drill down the available institutions to those of their field of interest. Next to the institutional information, there will also be student experiences available on the portal. Per institution the student will be able to view the basic contact data as well the fact sheet as provided by the partner. The goal to have this portal running by Q4 2022.

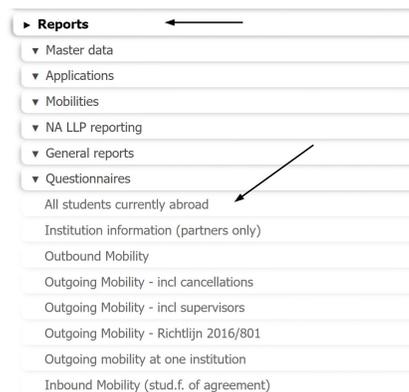

Poll

[Did you know there is a WIKI about Mobility-Online?](#)

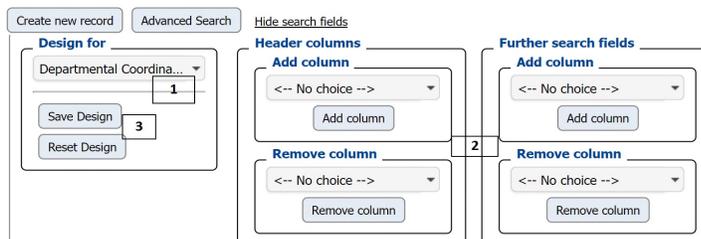

Let's talk: Terminology

Reports: Within Mobility-Online there are several types of reports available. Here we want to show you where to find the simple reports, which generate a list or overview of all applications in the system. For more detailed information the respective reports, please check the information available in the [WIKI](#).

Tips & Tricks

Quickly change your view by clicking on the “design editor” located in the bottom right corner of the screen. Then add or remove columns to tailor your view to your needs. First, select the role for which you want to change the view. Then add or remove columns by selecting them from the dropdown menus. Then save the changed view. As you can see, there is also an option to reset the design.
