SUBJECT
Advice new courses AI4Health

Dear Programme Director,

The programme committee has discussed the descriptions of the proposed courses related to the new track AI4Health on May 11.

We have minor comments about three courses:

- Case Study in DS&AI; Here we see that the report is now part of the assessment as we suggested. We do not know however what mandatory presence for the assignment means.
- Uncertainty Quantification and Data Driven Learning; Here we would recommend to list fewer recommended books as too many would be overwhelming. These sources can still be listed within the course or in some other way, but we advice to keep the overview of the material concise.
- Graphical Model and Causality; It is unclear what form the final exam has. We assume and suggest to specify it is a written exam, and we would like to be notified if this is not the case.

The following three courses did not get any specific comments:
Reinforcement Learning, Deep Learning for Medical Image Analysis, Research Topic AI4Health.

We give a positive advice about these six courses, and expect these comments will be adressed.

Best regards,

Hil Meijer
