SUBJECT  
Advice Master track MDS&AI

Dear Programme Director,

During a recent meeting of the programme committee of applied mathematics, we discussed the proposed changes for the Master track Mathematics of Data Science and Artificial Intelligence.

The programme committee has concluded that an internship and a master's thesis that takes 15 and 30 EC, respectively, still adequately addresses the learning outcomes. However, the programme committee also believes that a student should have the option to do an internship and master's thesis taking 20 and 40 EC, respectively. When a student is admitted to the master track using homologation, the 15 and 30 EC version should be the only option. When a student is admitted to the master track without the need of homologation, then they should have the option to choose.

Taking those remarks in mind, the programme committee gives a positive advice for the proposed changes for the Master track of Data Science and Artificial Intelligence.

Kind regards,

Emile Van der Veer  
Chair PC-AM
