The Phenomenon of Multilevel Regulation: Interactions between Global, EU and National Regulatory Spheres

Jan Wouters
Professor of International Law and International Organizations, and Director of the Leuven Centre for Global Governance Studies and the Institute for International Law at the University of Leuven

Abstract
Rules are no longer merely made by states, but increasingly by international organizations and other international bodies. At the same time these rules do impact the daily life of citizens and companies as it has become increasingly difficult to draw dividing lines between international, EU and domestic law. This contribution introduces the notion of ‘multilevel regulation’ as a way to study these normative processes and the interplay between different legal orders. It indicates that many rules in such areas as trade, financial cooperation, food safety, pharmaceuticals, security, terrorism, civil aviation, environmental protection or the internet find their origin in international cooperation. Apart from introducing multilevel regulation on the basis of a number of examples, the authors try to set out an agenda for further research, including legal and non-legal approaches.

Keywords
Multilevel, international organizations, legitimacy, legal orders, international rules

1. Introduction
Over the past decade, globalisation and global governance have become central themes, not just in international relations and politics, but also in the study of...
international and national law. The reason may well be, as some observers hold, that “central pillars of the international legal order are seen from a classical perspective as increasingly challenged: the distinction between domestic and international law becomes more precarious, soft forms of rule-making are ever more widespread, the sovereign equality of states is gradually undermined, and the basis of legitimacy of international law is increasingly in doubt.” Indeed, many of these themes feature in current research programmes. Domestic legal systems – traditionally, by definition, caught in national logic – increasingly recognise the influence of international and transnational regulation and law-making on their development. Legal scholars attempt to cope with the proliferation of international organisations and other entities contributing to extra-national normative processes.

While the notion and consequences of globalisation are the subject of debate, common denominators seem at least to include a profound transformation of the traditional Nation State and the inability of sovereignty to protect the State against foreign interference. The proliferation of international organizations and the expansion of international law, as well as the related need for national legal systems to implement ever more international rules, are commonly considered to go hand in hand with globalisation. Apart from challenging some of the foundations of international law, globalisation raises questions, in particular, about the negative effects it may have on the rule of law, democracy and legitimacy.

The interactions between national and international legal spheres, including the European legal sphere for EU Member States, have intensified and gained

---

7) See von Bogdandy, supra note 5, at 889.
increased visibility over the last few years. It is becoming ever more difficult to
draw dividing lines between legal orders: international law is increasingly com-
ing to play a role in national (and EU) legal orders, whereas national (and EU)
legal developments are exerting a bottom-up influence on the evolution of the
international legal order. In political science and public administration, the phe-
nomenon of interacting and partly overlapping policy spheres is often referred to
as multilevel governance. Two dimensions of this concept are particularly relevant
to the present contribution. The first, so-called governance without government,
points to the phenomenon that a number of public tasks are increasingly assumed
and carried out by actors other than the classical government institutions of the
Nation State (and its subdivisions). The second dimension, so-called governance
beyond the State, refers to the complexity of governance at distinct but increas-
ingly intertwined levels. “Multilevel” then refers to a variety of forms of decision
making, authority, policy making, regulation, organization, ruling, steering, et
cetera, which are characterized by a complex interweaving of actors operating at
different levels of formal jurisdictional or administrative authority, ranging from
the local level, via the national level, to the macro-regional and global level. These
phenomena involve important questions concerning the location of power, the
sharing of responsibility, the legitimacy of decisions and decision takers, and the
accountability to citizens and organizations in different national, sub-national and
international settings. From a legal perspective, the interactions between global,
European and national regulatory spheres lead to the phenomenon of “multilevel
regulation.” We understand “regulation” in a broad sense here, referring to the
setting of rules, standards or principles that govern conduct by public and/or pri-

8) On the phenomenon of what can be cautiously referred to as a new “Europeisation” of intern-
national law, see The Europeanisation of International Law: The Status of International Law in the EU
and Member States (J. Wouters et al. eds., forthcoming 2008).

9) See, e.g., Oliver Treib et al., “Modes of Governance: A Note Towards Conceptual Clarification”,

10) A classic is L. Hooghe and G. Marks, Multi-level Governance and European Integration (2001).
In legal academic circles, the notion has been picked up and applied, inter alia, by N. Bernard,

tussen de mondiale, Europese en nationale rechtsorde” [The Increasing Interrelatedness between
Global, European and National Legal Orders], Inaugural Lecture at the University of Twente 26
(Jan. 12, 2006), available at <www.mb.utwente.nl/ces/research/other_publications_including_i/oratiewessel.pdf>.
The term, however, is quite common in biochemistry. See, e.g., I. Olson, et al.,
“Multilevel Regulation of Lysosomal Gene Expression in Lymphocytes”, 195 Biochemical & Biophysical
Transcription Factor σK in Bacillus subtilis”, 175 J. Bacteriology 7341 (1993).
vate actors. Whereas “rules” are the most constraining and rigid, “standards” leave a greater range of choice or discretion, while “principles” are still more flexible, leaving scope to balance a number of (policy) considerations.

The purpose of the present contribution is to introduce and further analyse this relatively new phenomenon. In doing so, we examine two questions: what are indications of interactions between normative processes at the global, European and national levels; and what consequences do these interactions have for the research agenda related to the further development of the global and European legal order? In section two, we first attempt to map and further define the phenomenon of multilevel regulation. Section three follows with an analysis of the legal community’s responses to this phenomenon. In section four, we try to set out an agenda for further research, including legal and non-legal approaches.

2. The Phenomenon of Multilevel Regulation

2.1. The Invasion of International Organisations

International organizations and international regimes are increasingly engaged in normative processes that, de jure or de facto, impact on States and even on individuals and businesses. Since decisions of international organizations are increasingly considered as a source of international law, it is quite common to regard them in terms of international regulation or legislation. Whereas regulation, as stated above, is the more comprehensive term used in this contribution, “legislation” has a more narrow connotation, as “legislative power” has been said to have three characteristics: (1) a written articulation of rules that (2) have legally binding effect as such and (3) have been promulgated by a process to which express authority has been delegated a priori to make binding rules without affirmative a posteriori assent to those rules by those bound. An even more distinguishing
element, perhaps, is that such rules imply future application to an indeterminate number of cases and situations.\(^\text{16}\)

It is undisputed that international organizations may take binding decisions vis-à-vis their Member States and that they may even exercise sovereign powers, including executive, legislative and judicial powers.\(^\text{17}\) Thus, apart from the EC and the UN,\(^\text{18}\) organizations with such a competence to take legally binding decisions include the World Health Assembly of the World Health Organization (WHO), the Council of the International Civil Aviation Organization (ICAO), the Organization of American States, the Western European Union (WEU), North Atlantic Treaty Organization (NATO), the Organisation for Economic Co-operation and Development (OECD), Universal Postal Union (UPU), World Meteorological Organization (WMO) and the International Monetary Fund (IMF).\(^\text{19}\) As José Alvarez notes, more and more technocratic international organizations “appear to be engaging in legislative or regulatory activity in ways and for reasons that might be more readily explained by students of bureaucracy than by scholars of the traditional forms for making customary law or engaging in treaty-making; they also often engage in law-making by subterfuge.”\(^\text{20}\) Thus, Alvarez’s survey includes standard setting by the International Maritime Organization (IMO), the Food and Agriculture Organization (FAO), the ICAO, the International Labour Organization (ILO), the International Atomic Energy Agency (IAEA), United Nations Environmental Programme (UNEP), the World Bank, and the IMF. In addition, many international conventions – including the United Nations Convention on the Law of the Sea (UNCLOS) and a number of World Trade Organization (WTO) agreements – incorporate generally accepted international “rules, standards, regulations, procedures and/or practices.”\(^\text{21}\) Alvarez points to the fact that this effectively

\(^{17}\) See Sarooshi, supra note 4.

\(^{20}\) Alvarez, supra note 4, at 217.

\(^{21}\) Id., ch. 4.
may transform a number of codes, guidelines and standards created by international organizations and bodies into binding norms. Indeed, while in most cases standard setting is accomplished through softer modes of regulation, this may leave the subjects of regulation “with as little effective choice as some Security Council enforcement actions.” Nevertheless, most types of law making by international organizations generally are directed towards the organization’s own members, viz., States. However, what if decisions by international organizations either de jure or de facto become part of the domestic legal order of the Member States and directly or indirectly affect citizens and/or businesses within those States?

While in most States the decisions of international organizations and bodies typically require implementation in the domestic legal order before they become valid legal norms, the density of the global governance web has caused some interplay between the normative processes at various levels. For EU Member States (and their citizens), this can imply that the substantive origin of EU decisions (which usually enjoy direct effect in, and supremacy over, the domestic legal order) is to be found in another international body. In many areas, ranging from security to food safety, banking, health issues or the protection of the environment, national rules find their basis in international and/or European decisions. In those cases, decisions may enter the domestic legal orders as part of European law. However, international decisions also may have an independent impact on domestic legal orders. This is not to say that international decisions have a direct effect in the sense we are accustomed to in EU law. From the point of view of international law, while “primacy is a matter of logic as international law can only assume its role of stabilizing a global legal order if it supersedes particular and local rules,” at the same time it “allows for an undefined variety of combinations based either upon the doctrine of monism or the doctrine of dualism.” However, the fact that many domestic legal orders do not allow their citizens to directly invoke international norms before national courts does not mean that these norms are devoid

---

22) Id. at 218.

23) A number of international organizations also contain other international organizations as members: for instance, the WTO has the European Community as one of its founding members.

of impact. As the norms usually are based on international agreements and/or decisions of international organizations, States will simply have to follow the rules of the game in their international dealings. This implies that even domestically they may have to adjust to ensure that the rules are observed by all parts of the administration. The *de facto* impact of the – often quite technical – norms and the need for consistent interpretation may thus set aside more sophisticated notions of the applicability of international norms in the domestic legal order.

The United Nations Security Council forms a good example of an international body that is increasingly active in the creation of “international regulation” or “international legislation,” although its legal competence to engage in these activities has been questioned. Thus, in the area of anti-terrorism measures for example, Security Council Resolution 1390 (2002) was no longer directed at the Taliban regime but at individuals (Osama bin Laden, the Al-Qaeda network and the persons and entities associated with them). In that respect, the resolution seems to herald a new development, as any connection with the territory of a State is omitted. Perhaps Resolution 1373 (2001) already pointed to something new when, in reaction to the terrorist attacks of September 11, 2001, the Council determined “that such acts, like any act of international terrorism, constitute a threat to international peace and security,” thus referring to terrorist acts in the abstract. The Council then imposed on all States duties to “prevent and suppress the financing of terrorist acts,” *inter alia* by criminalising conduct aimed at financing or supporting terrorist acts.

26) For a recent survey of the different legal systems in Europe, see *Ius Publicum Europaeum, Band I: Staatliches Verfassungsrecht im Europäischen Rechtsraum* [National Constitutional Law in a European Legal Space] (A. von Bogdandy et al. eds., 2007).

27) See id. at 109-10 (discussing the impact of the doctrine of consistent interpretation in relation to the domestic effect of WTO law).

Whereas its Charter presents the United Nations as an intergovernmental organization dealing with the relations between its Member States (compare Arts. 1 and 2), taking decisions that entail obligations on those Member States (Art. 25), and extremely hesitant to interfere in the domestic jurisdiction of any State, the Security Council recently took a number of decisions that directly affect citizens within Member States. Key examples include the establishment of the Tribunals for the former Yugoslavia and for Rwanda, the cases in which the UN has taken over the interim administration of a region or State (UNMIK in Kosovo and UNTAET in Timor Leste) and the replacement of traditional sanctions directed at States (e.g. Iraq) by “smart sanctions” directed at certain individuals or groups. Thus, the Security Council placed greater emphasis on its ability to take decisions with a great impact on intra-state issues rather than being involved merely in relations between States. Of course, even this development is not entirely new. By now we are used to the Council’s occasional determination of (the effects of) domestic conflicts as threats to (international) peace and security. Moreover, the discussion on military intervention for humanitarian reasons highlighted the possible (and, in the eyes of some, even necessary) role of the Security Council in this area. In this sense,

---

31) For a survey of Security Council activities in this area, see Iinger Österdahl, “The Exception as the Rule: Lawmaking on Force and Human Rights by the UN Security Council”, 10 J. Conflict & Security L. 1 (2005). See also Bernhard Graefrath, “Leave to the Court What Belongs to the Court:
it could be argued that the Security Council is no longer dealing with a particular situation between States or within a State, but with a more abstract situation that does not involve a particular dispute. Another example of an abstract danger could be Resolution 1422 (2002). By exempting certain “acts or omissions relating to a United Nations established or authorized operation” from the jurisdiction of the International Criminal Court, even though no ICC investigation was imminent, the Council in effect held the abstract possibility of such an investigation to be a threat to peace. A particularly clear example is Resolution 1540 (2004), in which the Council again identified an abstract danger – the proliferation of weapons of mass destruction to non-State actors – as a threat to peace, and it again laid down a general obligation on all States that they shall do such things as refrain from assisting non-State actors in acquiring weapons of mass destruction and criminalise the behaviour of non-State actors aimed at acquiring such weapons.32 Earlier examples of resolutions attempting to “regulate” a certain area without any relation to a specific conflict include the protection of civilians in armed conflicts and from the spread of HIV/AIDS, as well as certain methods employed by terrorist groups. However, in this context, the Council had not (yet) invoked its Chapter VII powers to lay down binding norms.33

The World Trade Organization is another body whose decisions have been labelled international regulation.34 While one may debate whether the decisions taken by the WTO’s Dispute Settlement Body (DSB) are to be seen as proof of the organization’s “legislative” or “adjudicative” powers, the fact remains that they reach beyond the WTO Members involved in the dispute and may even have serious consequences for individuals (including enterprises in particular).35 A similar

33) Eberling, supra note 32.

phenomenon may be discovered in another dimension of the WTO: intellectual property, regulated in the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPs), which may affect the producers of HIV/AIDS medicines, in that an international decision ensures that their products may be sold under the market value in developing countries. Apart from the fact that the WTO has no facilities for individual access to a judicial review procedure such as those applicable within the EU, it may nevertheless find itself bound by Security Council resolutions, which may, in turn, have a conclusive impact on the outcome of a WTO dispute settlement procedure.

Other examples of international regulation can be found with the UN High Commissioner for Refugees (UNHCR) in relation to the fixing of standards regarding the establishment of a refugee status of the governance of refugee camps, the WHO in establishing global health risks, the so-called Financial Action Task Force of the OECD in the area of money laundering, the World Intellectual Property Organization (WIPO) in the area of intellectual property, and the World Bank in setting criteria for obtaining financial support.

International norms do not always reach States’ domestic legal order directly: they may follow a route through other international bodies. In the European Union, the relation between EU decisions and decisions taken by other international bodies is, indeed, quite obvious. Whereas this has been particularly apparent in the area covered by the internal market, the Union recently made clear that there also is interplay between its decisions and United Nations anti-terrorism measures. In the Yusuf and Kadi cases, citizens of the Union did not succeed in having their names removed from UN and EU sanctions lists. The Member State in question (Sweden) was faced with the supremacy of EU law, whereas the European Court of First Instance held that the European Community is bound by UN law and the Court was in no position to judge the legality of UN Security Council Resolutions. At the same time, the relationship between the European Community and the

WTO may be regarded from a multilevel perspective. While the WTO is in no way comparable to the UN where questions of hierarchy and primacy are concerned, the ECJ has indicated the necessity that Community law be interpreted in conformity with WTO law. In that sense, similar arguments to those used by the Court of First Instance in the *Yusuf* and *Kadi* cases could appear in cases where individuals claim to be a victim of a WTO (DSB) decision, in which case they would add to the already difficult position of individuals under WTO law.\(^{39}\)

There thus seems to be a need to investigate the interplay between regulatory powers of international organizations.\(^{40}\) The close relationship between norms enacted by the World Health Organization, the World Trade Organization and the European Union, for instance, is evident.\(^{41}\) The new International Health Regulations (IHR), as well as the WHO Framework Convention on Tobacco Control (FCTC), may be seen as additional examples of this interaction. One could also point to the International Codex Alimentarius Commission, a subsidiary common body of FAO and WHO, which develops international standards on food safety. It cannot be denied that – in particular through the WTO’s Agreement on Sanitary and Phytosanitary Standards\(^{42}\) – these standards have an effect in other legal orders, including in those of the EU and its Member States. The fact that the European Community has been a Member of the Codex Alimentarius Commission since 2003\(^{43}\) reinforces the multilevel nature of this field of regulation.\(^{44}\)

---

\(^{39}\) So far the direct effect of WTO law has not been accepted by the European Court of Justice. See, e.g., Case C-149/96, Portugal/Council. For examples in the area of international trade, see Sidney A. Shapiro, “International Trade Agreements, Regulatory Protection and Public Accountability”, 54 *Admin. L. Rev.* 435, 435 (2002).

\(^{42}\) Art. 3.4 and Annex A.3.a), SPS Agreement.

Similar examples may be found in the area of environmental protection, where international standards are set that are not only binding on States but also on the European Community and which – in any case through the latter – are also relevant to individuals. Heldeweg points to some examples in the area of tradable allowances. Regulation 2037/2000 on substances that deplete the ozone layer, implementing the Vienna Convention and Montreal Protocol, contains a system of trade through licences to import or export controlled substances from other countries (which may or may not be parties to the Montreal Protocol). More important, and certainly more innovative, may be the Directive establishing a scheme for greenhouse gas emission allowance trading within the Community. This scheme precedes the obligations under the first commitment period of the Kyoto Protocol (2008-2012) and aims to prepare the Community for allowances trading. Finally, the effects on individuals are particularly evident in the framework of the so-called Aarhus regime. The Aarhus Convention is an important multilateral environmental treaty to which the Community is a signatory and which is underpinned by three basic legal requirements in the area of openness and participation: (a) access to environmental information; (b) public participation; (c) access to judicial review in environmental cases. Each of these requirements, also referred to as the Aarhus pillars, has given rise to legislation or proposals based thereon. In other cases, too, the EC is a party to international environmental treaties, or is involved in their implementation on behalf of EU Member States.

46) 2000 O.J. (L 244/1).

2.2. The Expansion of Regulation: from Government to Governance

In their interdisciplinary survey of research on regulation, Baldwin, Scott and Hood developed three definitions of regulation. In the first, most stringent definition, regulation refers to the promulgation of an authoritative set of standards and rules accompanied by some mechanism for promoting and monitoring compliance with these rules and standards. A second, broader definition refers to all the efforts of State agencies to steer individual and organizational behaviour. A third approach to regulation considers all mechanisms of social control, including non-State processes. In recent times, in addition to the standard setting practice of international organizations referred to above, it is especially this third type, with new forms of social or so-called privatised regulation that is on the rise and is even proliferating. This evolution is taking place in a context of trends, such as the weakening of national governments, the rise and professionalisation of multinational corporations and supply chains, and the proliferation, diversification and internationalisation of new social movements and their strategies. This shift is often referred to as a shift from government to governance in regard to policy making.

Traditionally, social problems or public policy issues were governed by States via a regulatory framework consisting of bureaucracies (departments and ministries) and legislation. This top-down, command-and-control approach aimed at setting and implementing standards that are/were applicable to all parties involved in the same way. From the 1980s on, though, the deficiencies of this approach started to...
emerge in both old and new policy fields, leading to the development of new policy instruments and arrangements. A move away from the State as the sole actor in policy making constitutes a major policy shift. The State traditionally acted in a top-down, command-and-control fashion. However, apart from an increasing role of international organizations and bodies, as explained above in section 2.1, new modes of policy making are characterized by a greater role for private actors, either via intensive negotiation, consultation, interaction, and even self-regulation, or via increasing economic and market-oriented strategies and instruments. This broadening of the “spectre of intervention” implies a fundamental redefinition of the role of the State: the State should no longer row but steer, focus more on means than on ends, and concentrate more on organization and direction than on provision. The new policy catchwords are bottom-up policy processes: empowerment, the importance of learning processes, (open methods of) co-ordination, co-operation, consensus, flexibility, tailor-made solutions, self-regulation, public-private partnerships, participation and benchmarking. Tatenhove, adopting a European perspective, identified the following major policy changes: “(a) the traditional divides between state, market and civil society are disappearing, while (b) the interrelations between these spheres increasingly exceed the nation state, (c) resulting in new coalitions between state agencies, market agents and civic parties both on local and global levels.” The overall result is a policy style characterized by plurality in terms of policy instruments, coalitions between parties,

---

56 D. Liefferink et al., supra note 55, at 10; Jänicke, supra note 54, at 166.

the allocation and distribution of power and new forms of co-operation. In the United States, too, legal scholars and political scientists describe the emergence of a new democratic model: “The emergent model, which we call democratic experimentalism, combines the virtues of localism, decentralization, and direct citizen participation with the discipline of national coordination, transparency, and public accountability.”61 As Karkkainen and his co-authors go on to note, “In contrast to conventional hierarchical regulation in which subordinate private actors answer to the authoritative command of a central regulator, the practical core of the new model is centrally monitored local experimentation.”62

These new forms of governance are considered superior to existing policy-making strategies for a number of reasons: (1) they are assumed to improve the substantive quality of decisions and policy making by incorporating new information obtained from the different participants; (2) they increase learning processes among the participants (by educating the actors involved) and in this way generate new knowledge; (3) they incorporation of public values into decisions; (4) they are supposed to resolve, contain or reduce conflict among competing interests and the actors involved, integrate local knowledge and context in decision making, hence tailoring it to local circumstances; (5) they achieve cost-effectiveness; and (6) they increase compliance via greater commitment to and support for the implementation of decisions.63 Existing policy practices are criticised for being overly rigid (because they encompass rules that hold across a nation and nations)

62) Karkkainen et al, supra note 61, at 691.

and for their limitations in being able to incorporate local and specific information in the design of solutions.

As a result of this policy shift, one can observe, both nationally and internationally, the emergence of new co-operative policy initiatives and new forms of governance, such as public and stakeholder participation in decision making,\(^{64}\) voluntary agreements and covenants, self-regulation by companies via the introduction of management systems and codes of conduct,\(^{65}\) stakeholder partnerships for the management of ecosystems or the monitoring of human rights issues and labour conditions on a global scale,\(^{66}\) collaborative pragmatism,\(^{67}\) the development of corporate social responsibility models, and the rise and proliferation of accreditation and certification bodies such as the Forest Stewardship Council, Fair Labour Association or Marine Stewardship Council.\(^{68}\)

2.3. Governance and Regulation as a Multi-actor Game

What has been set out above already indicates that governance, and by the same token regulation, has become a multi-actor game; apart from intergovernmental organisations, non-governmental and transnational actors are playing an increasing role in global governance.\(^{69}\) In some issue areas, there is intense co-operation between State and non-State actors. Apart from the obvious example of the

\(^{64}\) See Beyerle & Cayford, Supra note 64; Cowie & O’Toole, supra note 64.

\(^{69}\) Anne-Marie Slaughter regards these networks as a better way of world governance than the traditional state-centric approach. See Anne-Marie Slaughter, A New World Order (2004). Apart from transnational networks, the international legal order is also challenged by hegemonic international
International Labour Organization, one could point to the Codex Alimentarius Commission, as was discussed in section 2.1 above, or to ICANN, which governs the internet. In some areas, States even have ceased to play a role in governance, and transnational actors have taken over. A prime example is the International Standardization Organization (ISO), which by now has produced some 13,000 rules on the standardisation of products and processes. These rules often are adopted by other international organisations, such as the WTO, which allows them to indirectly affect national legal orders. A similar situation arises in relation to the norms set by the World Anti-Doping Agency. It is clear that individuals or companies may be confronted by rules that were adopted without any direct influence by their national legislature or that simply have to be adopted at the national level in order to be able to participate in international co-operation. Something like global law without the State does exist, and in some areas, States do not play any role in global regulation. What one witnesses is a transnational co-operation that already has led to a complete set of rules on the use of the internet: the lex digitalis, comparable to the lex mercatoria related to transnational trade. Other examples include the Basel Committee, in which the central bank directors of a limited number of countries harmonise their policies in such a way as to result in a de facto regulation of the capital market, and the International Organization of Securities Commissions (IOSCO), which deals with the transnationalisation of securities markets and attempts to provide a regulatory framework for them. National agencies thus participate in global (or regional) regulatory networks as independent, autonomous actors and are, in turn, often required to implement international regulations or agreements adopted in the context of these networks.

law (HIL). On the influence of hegemons, see e.g., Alvarez, supra note 3, 199-217; Gary Simpson, Great Powers and Outlaw States: Unequal Sovereigns in the International Legal Order (2004).

76 See Barr & Miller, supra note 76, at 15; Jayasuriya, supra note 4, at 449.
at the national level. As early as a decade ago, Slaughter termed this phenomenon the “nationalization of international law.” According to Jayasuriya, these new regulatory forms have three main features: (1) they are governed by networks of State agencies acting as independent actors rather than on behalf of the State but; (2) they lay down standards and general regulatory principles instead of strict rules; and (3) they frequently contribute to the emergence of a system of decentralised enforcement or the regulation of self-regulation.

Apart from non-governmental bodies and national agencies making their own international deals, a relatively new development is the proliferation of international bodies that are not based on an international agreement but on a decision by an international organization. According to some observers, these new international entities even outnumber the conventional organisations. International regulatory co-operation often is conducted between these non-conventional international bodies. The tendency towards functional specialisation because of the technical expertise required in many areas may be a reason for the proliferation of such bodies and for their interaction with other international organizations and agencies, which sometimes leads to the creation of common bodies, such as the Global Environment Facility (GEF, created by the World Bank and joined by UNDP and UNEP) and UNAIDS, the Joint United Nations Programme on HIV/AIDS (instituted by the United Nations Children’s Fund (UNICEF), the United Nations Development Programme (UNDP), the United Nations Population Fund (UNFPA), the United Nations Educational, Scientific and Cultural Organization (UNESCO), WHO and the World Bank). Whereas traditional international organizations are established by an agreement between States, in which their control over the

organization and the division of powers is laid down\(^{83}\) the link between newly created international bodies and the States that established the parent organization is less clear. In a recent study, Martini points to fundamental sectors, such as environmental protection and public health\(^{84}\) where the GEF and UNAIDS “demonstrate how the entity’s will does not simply express the sum of the Member States’ positions, but reformulates them at a higher level of complexity, assigning decision-making power to different subjects, especially to the international institutions that promoted the establishment of the new organization.”\(^{85}\) Martini’s study reveals that the loss of States’ influence – and hence the autonomous position of international agencies – is reflected in at least three phenomena:\(^{86}\) (a) the fact that the new entities emerge from the regular decisions of other organisations, rather than through the treaty-making process, compromises States’ ability to influence not only their creation but also their further development; (b) States may lose some powers to the parent organizations, such as the power to appoint the new entity’s executive heads; moreover, they might have to share the power to define and manage the organization’s activities; and (c) in the non-State-created organizations the international secretariat plays a greater role. This is not to say that all these international bodies can readily be compared with each another: “In fact, these institutions are established in different ways, have different institutional structures and relationships with their parent organizations, and different areas of activity and functions.”\(^{87}\) However, the need for collaboration between international agencies and the subsequent creation of common organizations has resulted in a global regulatory sphere in which States increasingly are confronted with a decrease in their capabilities to influence global normative processes.

3. The Response from the Legal Community

Legal studies only recently have started to recognise the phenomena described above. After all, the international legal system is formed on the basis of legally autonomous national legal orders, which are in principle exclusively competent to create, implement and enforce legal norms. Nevertheless, an increasing number of studies depart from the notion that the national legal order is part of a multilevel international legal order and that the creation, application and interpretation of national, as well as international, norms should take account of the multilevel structure of the system. With the development of the international legal order, we have grown accustomed to legal norms being developed outside of national legal orders. The proliferation of rule makers at the international level poses new challenges to the coherence of this order. While treaties and custom remain the primary sources of international law, we have seen above that decisions of international organizations are playing an ever larger part in the development of international law. As national governments have become increasingly dependent on international institutions, a large part of national policy is influenced by and depends on international decisions. Although States do not cease to exist by becoming a member of an international (integration) organization, it becomes very difficult to regard their national legal order as existing in complete isolation from the legal system of the organization. The constitutional setting in which they operate is no longer merely defined domestically, but may depend, in large part, on general international law, and at least clearly includes the arrangements to which they agreed in the context of an international organization in question. Conversely, the international organization has to deal with the Janus-faced identity of Member States: on the one hand, Member States are an integral part of the international organization they set up among themselves; on the other hand, the States are the counterparts of the same international organization, in the sense that both occupy independent positions within the international legal order and even have obligations towards each other.

The legal community has developed a variety of approaches to deal with this complexity: (a) constitutionalism, (b) global administrative law, (c) fragmentation of international law.88

88) Interestingly, almost all the legal scholars in question have a background in international law. Scholars active in the areas of constitutional law and legal theory seem to be more prone to adopt a comparative approach, continuing to see the State as the central reality and not really focussing on normative processes in the international legal order. See, e.g., W. Twining, Globalization and Legal Theory (2000). An author who does pay attention to developments at the global level is Tamanaha. See B. Tamanaha, On the Rule of Law: History, Politics, Theory (2004).
3.1. Constitutionalism

The combination of the phenomenon of multilevel governance and the related declining ability of States to achieve the realisation of human rights, fundamental freedoms and democratic procedures, has led a number of legal scholars to view constitutionalism in multilevel terms. On the one hand, it is assumed that globalisation may strengthen the protection of fundamental values at the national level – for example, through a constitutionalisation of human rights, as experienced in Europe with the European Convention on Human Rights and Fundamental Freedoms and the extensive case law of the European Court of Human Rights. On the other hand, global processes may undermine these values – for instance, as a result of the limited (democratic or otherwise) legitimacy of international decisions and deficits in accountability, the rule of law (e.g., the lack of a possibility for review by an independent judiciary) and transparency. In the words of Petersmann, “the inevitable ‘democratic deficit’ of worldwide organisations for the collective supply of ‘global public goods’ must be compensated for by subjecting their multilevel governance to multilevel constitutional restraints at both international and domestic levels.” While the trend towards approaching international organizations from a constitutional perspective started in relation to the European Union,

---

other international organizations have become subject to academic constitutional scrutiny as well. In fact, as one observer holds:

If anyone were to propose a pairing of phrases to characterize current developments in international law, the smart money would surely be on constitutionalisation and fragmentation. Any international lawyers propose that treaty regimes be constitutionalized, and voice such proposals in particular in the context of international organizations.

Important parts of the changing nature of the international legal order are studied in what is frequently referred to as “international constitutional law.” One of the questions in international constitutional law is whether a so-called domestic analogy is useful and to what extent one has to take account of the fact that global governance acknowledges no single government, but rather numerous different

---

actors at various levels, all in their own manner influencing policy making and, for our purpose, rule making through complex, often interrelated processes.

### 3.2. Global Administrative Law

Another manner in which global governance and regulation is being tackled by legal scholarship is the so-called global administrative law approach. The term was introduced by Kingsbury, Krisch and Stewart when they launched a project under this title at New York University. They define global administrative law as “comprising the structures, procedures and normative standards for regulatory decision-making, including transparency, participation, and review, and the rule-governed mechanisms for implementing these standards, that are applicable to formal intergovernmental regulatory bodies; to informal intergovernmental regulatory networks; to regulatory decisions of national governments where these are part of or constrained by an intergovernmental regime; and to hybrid public-private or private transnational bodies.”\(^98\) The focus in the global administrative law project is on the administrative components and functions of international and transnational regulatory regimes. At the same time, however, quite a broad scope is adopted as “much of global governance can be understood and analyzed as administrative action: rule making, administrative adjudication between competing interests, and other forms of regulatory and administrative decisions and management.”\(^99\) The project thus addresses many of the questions posed in the present contribution with a view to a possible emergence of global administrative law. In doing so, many contributions focus on specific regulatory regimes, ranging from the OECD to accounting, the global garment industry, investment treaty arbitration, procurement rules, urban water service delivery, development co-operation, the environment, or the UNHCR.\(^100\) At the same time, contributions draw a comparison with domestic

---

\(^99\) Id. at 5.

administrative law systems.\textsuperscript{101} The domestic analogy flows from the fact that the “real addressees of … global regulatory regimes are now increasingly the same as in domestic law: namely, individuals …, and collective entities in regulated spheres including corporations and in some cases NGOs.”\textsuperscript{102} This calls for the recognition of a global administrative space in which international and transnational administrative bodies interact in complex ways. The notion that this global administrative space can be distinguished from both the space of inter-state relations governed by international law and from the domestic regulatory space governed by domestic administrative law is underlined by the findings in the present contribution in relation to multilevel regulation. In fact, one may state that nowadays the phrase “global law” better represents the characteristics of the international (global) legal order than the phrase “international law.”\textsuperscript{103}

### 3.3. Fragmentation

The discussions of the “fragmentation of international law” took a high flight at the end of the twentieth and the beginning of the twenty-first centuries. The International Law Commission considered the issue serious enough to be taken up, and its study group dealing with this matter recently issued a report on the matter.\textsuperscript{104} A great variety of scholars meanwhile have written on the phenomenon of the fragmentation of international law.\textsuperscript{105} The name refers to the increasing

\textsuperscript{101} See, e.g., Stewart, supra note 97. In this contribution, we leave aside the consequences of globalisation for national administrative law as a result of the changing role of the State due to both the increasing interplay between national and international law and between the public and private sector. On this topic, see, e.g., A.C. Aman, Administrative Law in a Global Context (1992); A.C. Aman, "Administrative Law for a New Century", in The Province of Administrative Law (M. Taggart ed., 1997); Jost Delbrück, “Globalization of Law, Politics and Marketers – Implications for Domestic Law – A European Perspective”, 1 Ind. J. Global Legal Stud. 9 (1993). For the consequences of the constitutional order of (in this case) the United States, see generally M. Tushnet, The New Constitutional Order ch. 5 (2003).

\textsuperscript{102} Kingsbury et al., supra note 99, at 10.

\textsuperscript{103} Cf. Global Governance and the Quest of Justice: International and Regional Organizations (D. Lewis ed., 2006). That this could also be seen as a step towards a ‘world government’ was recently argued by B.S. Chimni, supra note 98.

multitude of regulatory regimes and international dispute settlement systems, the jurisdiction of which may be partly overlapping or at least in conflict with other specialised fields of international law and policy. Although the notion of fragmentation also is closely connected to an international regulatory order in which “an ever-increasing number of regulatory institutions with overlapping jurisdictions compete for influence,” the scholarly research on this phenomenon mainly is conducted at a horizontal and global level. The fragmentation debate focuses on possible or real inconsistencies and conflicts between the various international regulatory regimes and dispute settlement mechanisms. Therefore, it does not specifically consider the legal and political consequences of multilevel governance and regulatory activities, as is the case in this contribution.

This having been said, the fragmentation debate provides us with valuable insights as far as the problem of conflicting norms is concerned. The aforementioned report of the study group on fragmentation of the International Law Commission addresses this problem, which it sees as a normal result of the development of “new rules and legal regimes as responses to new preferences, and sometimes out

of conscious effort to deviate from preferences that existed under old regimes.”

One of the general conclusions of the report is that there is “no homogenous, hierarchical meta-system realistically available to do away with such problems [of coordination at the international level].” Therefore, “increasing attention will have to be given to the collision of norms and regimes and the rules, methods and techniques for dealing with such collisions.” The report notes that further attention needs to be paid to these methods and techniques. The use of conflict clauses may be one technique, but these clauses often are unclear and ambivalent. Furthermore, conflict rules like *lex posterior* and *lex specialis* may need further study and may be insufficiently sophisticated to address the conflicts that can occur in the present international legal order.

If the ordinary conflict rules are already inadequate in the present international legal order, this applies *a fortiori* to multilevel regulation, as the rules of international treaty law on the relationship between various treaties are not adjusted to the complex interactions between global, macro-regional and domestic legal systems. Rather, one could hold with Fischer-Lescano and Teubner that “the unity of global law is no longer structure-based, as in the case of the Nation-State, within institutionally secured normative consistency; but is rather process-based, deriving simply from the modes of connection between legal operations, which transfer binding legality between even highly heterogeneous legal orders.”

4. An Agenda for Research

The phenomenon of multilevel regulation has been approached from a variety of angles, using a variety of concepts and terms. The so-called invasion by international organizations raises a number of new research questions that go beyond the law of international organizations itself and include EU and national law. It is above all the interplay between the legal orders that causes legal research to re-assess classic notions surrounding the hierarchy of norms, legal protection, judicial interplay

---

108) Id., para. 493.
109) Id.
and the normative force of international decisions. In doing so, legal scholars increasingly make use of notions and insights that were developed in other academic disciplines, notably political science and public administration. Below we have made an attempt to list some of the approaches that seem relevant in setting up an agenda for research related to the consequences of multilevel regulation.

4.1. Combining Different Legal Perspectives: Accountability, Democracy, Legitimacy, Rule of Law

An interesting contribution to the study of multilevel regulation, in line with the global administrative law project outlined above in section 3.2, could be the emphasis on the need to rethink domestically based notions of democracy, legitimacy and the rule of law. After all, “[e]very European system acknowledges the primary function of administrative law as being the control of public power,”112 or “bounded government.”113 Harlow lists a number of principles as forming the basis for administrative law: accountability, transparency and access to information, participation, the right of access to an independent court, due process rights, including the right to be heard and the right to reasoned decisions and reasonableness. European legal systems have added proportionality and legitimate expectations to this list. This calls for a linking of procedural and substantive norms.114

We submit that a further conceptual refinement and extensive comparative research into these concepts and principles should be high on the research agenda. In this context, it is particularly the subject of accountability that seems to us to be of major importance, since it feeds back into issues of legitimacy and democracy.115 Little is known about accountability systems in international organizations and the similarities and differences between international organizations inter se and between them and national agencies.116 Even less research has been conducted on accountability in other international bodies and forums. Especially crucial issues – such as control over executive decisions, leadership selection mechanisms, control over the

---

115) C. Graham, “Is there a Crisis in Regulatory Accountability”, in A Reader on Regulation 482 (R. Baldwin et al. eds., 1998).
formulation of strategic and operational goals of international organizations and control over standard-setting competences – are in need of further investigation and analysis. With regard to the latter, more research should be devoted to the question of what regulatory standards should be focused on by different levels of governance and actors in the policy arena (standards of physical design, standards of performance or organizational decision procedures).

The aforementioned research, albeit legal in nature, can contribute to a more comprehensive analysis of the quality of regulatory work by international organizations and bodies (including the use of regulatory tools designed to achieve better regulation, such as regulatory impact assessments) and an assessment of the concept of (international) rule precision. Colin Diver distinguished three qualities of regulatory rules, namely transparency, accessibility and congruence, and has developed criteria to determine the appropriate degree of regulatory precision. An assessment of international rules from this perspective could contribute to a better understanding of the impact of international rules on lower levels of regulation.

4.2. A Public Policy Perspective on Multilevel Regulation

A second set of questions that is assuming increasing importance with regard to multilevel regulation concerns the evaluation of these multilevel regulatory interventions from a public policy perspective. In assessing multilevel regulation from a public policy perspective, several theoretical arguments have been developed related to its possible benefits and drawbacks. Many of these arguments need further investigation. For example, some authors argue that dispersion of governance and regulatory practices across multiple jurisdictions is more flexible than the concentration of governance in one jurisdiction. This allows decision makers to adjust to diversity, reflect heterogeneity and stimulate competitive standard-setting dynamics. These arguments are closely related to the evolution from government to governance discussed above in section 2.2. Identified drawbacks of multilevel regulation include incomplete information, inter-jurisdictional co-ordination, interest-group capture and corruption due to ineffective systems of checks and balances. Most of these arguments about the drawbacks and benefits are, however, more hypotheses than established facts. Hence, more empirical research should

\[\text{n}20\] See id. at 236.
focus on whether these claims are valid and, if so, under what conditions. Much of this research can build on existing studies that focus on intra-state dynamics or intra-regional dynamics with regard to regulation. Let us briefly explore each aspect.

4.3. Rule Dynamics, Co-ordination and Co-operation in Multilevel Regulation

First, with regard to the issue of the beneficial consequences of flexibility and competitive dynamics in regulatory standard setting, research can build on existing studies that focus on lowest-common-denominator outcomes in collaborative standard setting. Some authors, in the context of international environmental policy making, have argued that the fears of lowest-common-denominator outcomes (“race to the bottom”) are sometimes unwarranted in international collaborative standard setting and that under certain conditions a “race to the top” can occur. In this context, other authors have pointed to the problem of being stuck at the bottom and the inability and/or reluctance of weak actors to participate in dynamic, co-operative standard setting initiatives. Most research in this context has been conducted on environmental or pollution control standards. This line of research can be extended to other areas, including pharmaceuticals, banking and aviation. Additional research should focus more on the dynamics of multilevel regulation at the international and national levels. A dynamic research perspective on standard setting should focus on questions related to the emergence of new rules (lowest common denominators), the development of new and existing related rules (convergence versus divergence; upward or downward dynamics) and the impact of these rules (implementation and effectiveness of rules).

Secondly, with regard to possible drawbacks, several issues need further investigation. The issues of imperfect information and inter-jurisdictional co-ordination are best placed in the overall context of co-ordination and co-operation problems in policy making. With regard to co-ordination problems, game theorists, institutional economists and political scientists have devoted much attention to the issue (and

---

124) See Follesdal et al., supra note 1.
sometimes dilemma) of co-ordination. Multilevel regulation further extends and complicates this issue. As Hooghe and Marks observe, the co-ordination and transaction costs increase exponentially as the number of relevant jurisdictions increases. Several strategies can be followed to deal with the problem of co-ordination. The most prominent one is to limit the number of autonomous actors who have to be co-ordinated. Reducing the number of actors can be done via pooling actors in core groups or by excluding actors from negotiations on rules. The first is increasingly happening, and research should focus on the issue of international core group formation, comparing different multilevel policy arenas in this respect.

The latter strategy – excluding actors – can generate problems of co-operation. In his classic work *Exit, Voice and Loyalty: Responses to Decline in Firms, Organizations and States*, Hirschman introduced two types of responses or strategies related to problems arising in collaborative settings, namely exit or voice. Exit occurs when an actor’s response to problems with other actors is to withdraw. Voice occurs when an actor’s response to problems with other actors is to work with the other actors until the problem is corrected. An interesting question about multilevel regulation is which strategy is used by actors in different multilevel policy arenas. Second, research can focus on explaining differences in the use of these strategies. Especially interesting in this context is linking the use of strategies to the design of multilevel governance institutions with regard to the design of co-ordination procedures. For example, in the context of international automobile firms, Helper found that firms used different strategies (exit/voice) towards suppliers (other actors). This was partially explained by the degree of administrative co-ordination that existed between parties. Administrative co-ordination, in essence, referred to the nature and amount of information that flowed between actors. As a result, 

127) See id. at 239.

128) A clear example of the core group formation issue concerns the involvement of the EU as one actor in WTO trade negotiations. The issue of core group formation is gaining ground in the EU itself, too. See S. Keukeleire, *EU Core Groups*, CEPS Working Document, Specialisation and Division of Labour in EU Foreign Policy No. 252 (2006).

depending on the design of co-ordination infrastructure, multilevel regulation might nurture exit or voice strategies. In other words, the interrelated issues of co-ordination and co-operation deserve special research attention in the context of multilevel governance.

4.4. Accountability, Democracy and Social Justice in Multilevel Regulation

Another set of issues, related to possible drawbacks of multilevel regulation, draws attention to questions related to accountability: ultimately democracy and the ability of States to govern according to autonomously chosen, fundamental principles of governance (e.g., related to social justice and culture).

With regard to accountability, a crucial issue for research concerns the question of who is held responsible for actions and by whom. In a recent review article, Bovens defined accountability as “a relationship between an actor and a forum, in which the actor has an obligation to explain and to justify his or her conduct, the forum can pose questions and pass judgement, and the actor may face consequences.”131 This definition builds on a principal-agent approach to accountability and highlights this important challenge to research on multilevel governance.132 In a simple principal-agent model, an agent reports directly to the principal who delegated to the agent the freedom to act on his/her behalf. However, as Benz, Harlow and Papadopoulos stress, systems of multilevel governance do not easily fit into this conceptual framework: “By complicating and obscuring straightforward ‘chains of delegation’ … they make it hard to identify a principal.”133 The latter, the identification of principals in multilevel systems, constitutes a major research topic for scholars studying international organizations. Comparative research designs might highlight striking differences between and within international organizations across policy domains and arenas.

The issue of accountability feeds into the issue of democracy and democratic control of multilevel governance. The issue of democracy poses another challenge: research needs to be conducted into the underlying models of democracy that underpin multilevel governance.134 It is important that this type of research focuses not only on a comparison of multilevel regulation arrangements vis-à-vis normative ideal types of democracy, but also takes into account the day-to-day reality of democracy. As Moravcsik argues, with regard to the democratic deficit debate in

the European Union, purely philosophical assessments can be interesting but run the danger of narrowing down conceptions of democracy:

Comparisons are drawn between the EU and an ancient, Westminster-style or frankly utopian form of deliberative democracy. While perhaps useful for philosophical purposes, the use of idealistic standards no modern government can meet obscures the social context of contemporary European policy-making – the real-world practices of existing governments and the multilevel political system in which they act. This leads many analysts to overlook the extent to which delegation and insulation are widespread trends in modern democracies, which must be acknowledged on their own terms. The fact that governments delegate to bodies such as constitutional courts, central banks, regulatory agencies, criminal prosecutors, and insulated executive negotiators is a fact of life, one with a great deal of normative and pragmatic justification.135

Besides models of democracy underpinning multilevel governance, a related set of questions points to the issue of what models of social justice and cultural diversity are incorporated in international rules. In the context of social justice models, it is important to assess whether international rule making follows standard economic optimisation rules or includes more egalitarian perspectives. The analysis of social justice models embedded in policy making and governance structures at the level of the nation State has a very long tradition.136 In the context of the EU, too, some attention has been paid to this topic in the context of the debate on the European social model. Issues of convergence or divergence between governance structures promoting market efficiencies vis-à-vis governance structures promoting social protection and equality have been analysed.137 However, less research is being conducted on what models of justice are incorporated, implicitly and explicitly, in international rule making and what the effect is on national models of justice. This requires an assessment of the re-distributional equity principle in international policy making (who pays, who gains, and what compensating measures are in place). For example, international rules on pharmaceuticals might stipulate the degrees of freedom for national healthcare policies with regard to medication and in this way feed back into policies closely related to social protection and redistributive sensitivities. Finally, in a globalising context, a cultural assessment – for example, the conformity of rules to general morality within different countries – becomes

increasingly important. The late Clifford Geertz highlighted the importance of the cultural context in which rules are made and implemented. As a result, problems arising from a mismatch between international rules and cultural norms need further investigation.

5. Concluding Observations

The phenomenon of multilevel regulatory processes and, more particularly, the various interactions between global, EU and national levels of policy and rule making are gradually becoming recognised in both the legal and political scientific communities. However, knowledge remains scattered, fragmentary and, in many cases, punctual or even anecdotal. There clearly is a need for a more comprehensive, thorough analysis of multilevel regulation and its ramifications. In the present contribution, we have tried to identify and sketch the phenomenon with a variety of illustrations, go through the responses of legal scholarship thus far, and set out an agenda for further research, including both legal and non-legal approaches. One point seems certain: this is a topic with many rich themes that will keep interdisciplinary researchers busy for many years to come. Faced with multilevel regulation, the old categories and dividing lines between international, European and national legal orders no longer work satisfactorily, and there is a clear need to rethink concepts such as transparency, democratic control of regulatory power, legitimacy, rule of law and judicial protection of fundamental human rights in situations of governance beyond the state.
