

In 4TU.Resilience context, we're organizing a so-called thematic working group within the Delta Futures Lab (see: <https://deltafutureslab.org/about/>) together with regional water authority WDODelta and the municipality of Zwolle. In this thematic working group, students from a variety of disciplines, professionals and researchers are developing solutions for a climate resilient Zwolle. The Delta Futures (DFL) is a TU Delft initiative, but based on the desire to strengthen transdisciplinary education within the 4TU context, we started a pilot in which 4TU.RE set up a DFL thematic working group for the challenge: *climate-resilient urban development of the Zwolle Region*.

Students that want to participate in this initiative and send an email to Dr Warbroek w.d.b.warbroek@utwente.nl before the 1st of October may visit the National Delta conference on November 10th! We have 10 tickets available!
