The University of Twente invites you to one of the Seminar: ‘The ins and outs of TOM’ on the 6th of November 2018, the 5th of February 2019 or the 28th of May 2019.

The Seminar is for (international) educational professionals and teachers who are interested in our innovative education model.

Our changing society asks for ‘T-shaped professionals’: graduates who know the depth of their field but are also capable of stepping off the beaten tracks and apply their knowledge more broadly, in collaboration with other disciplines and society. This is why we developed the Twente Education Model (TOM). Students learn theory and skills in 15EC thematic modules. Our education promotes active learning, is project-led and student centered.

In September 2013 all bachelor programmes were redesigned according to TOM. Last summer, the first TOM students graduated.

Visit our seminar and find out all about our module structure, project led education and implementation process of the educational innovation and ask students and experts about their experiences.

More information, registration and full programme of the seminars 2018-2019:
