

Overlap between Module Web Science and Module 7 of CreaTe

- For the current generation of students, there will be some overlap between Module 7 (Strategies and Protocols, S&P) and the module "Web Science", but it will be small. We estimate the overlap to be about 2 EC. Students with the background of S&P and interest in web science will have the opportunity to go deeper into the topics game theory, auctions, matching markets, and related topics.
- From next year on, the "Strategies and Protocols" part of Module 7 will be redeveloped, coordinated by Jasper Goseling (SOR) and Marc Uetz (DMMP). We will take care that the overlap with the module "Web Science" becomes negligible.

Overlap between Web Science module and module 8 (Data: from sources to senses)

- The core topics taught in Module 8 are data visualization, data management and Internet technology. We expect almost no overlap between the modules; if there is, it will be smaller than one EC.
