Capita Selecta MSC-CSE

Capita Selecta courses can be used to explore a specific topic within the field of chemical science and engineering in depth, which is not available as a regular course.

The assignment must be of a chemical nature and must be concluded as agreed with the supervisor. The topic is selected and supervised by a scientific staff member of one of the research groups who has the qualifications of an examiner. The duration of the assignment is at most 140 hours (i.e. max 5EC).

Process: The student contacts a full, associate or assistant professor of a research chair in the area of CSE. Together they formulate an assignment, write it down including a short motivation and clear learning objectives (max 1 A4), and communicate this to the examination board for approval.
