

MOBILITY IN 2030

As policy advisor at the municipality of Enschede I'm committed to affordable and sustainable energy. Not only to live, but also to move around in. In 2030 I hope to have achieved a situation in which 50% of drivers will move around in an electric car. People living in apartment complexes receive almost no attention here as they do not have their own driveway. I feel like we should be honest towards this group; it won't get more fun for them.
