# Preface

*Dear students,*

*Welcome to the Master's degree programme Educational Science and Technology (EST)! Our students tend to be inquisitive about how people learn. Many choose this programme because they want to deepen their understanding of how to study and support learning processes. Whatever your motivation, we are delighted that you will join and enrich our programme community.*

*The strengths of our programme stem directly from those of our lecturers. Their outstanding research and service work informs, inspires, and infuses their teaching. It also serves to build bridges between our programme and the employment sector. This is visible through courses that give attention to formal education in schools (EDU), professional growth in organisations (HRD), or overlapping areas (e.g. teacher professional development). Across all contexts, our lecturers invent and investigate the roles played by technology. This enables our programme and its graduates to contribute to development and use of cutting-edge educational technologies that address society's changing needs in ways that are scientifically valid, practical in use, and demonstrated to be effective.*

*By national and international standards, the programmes offered by the Faculty of Behavioural, Management and Social Sciences are of sound quality and developed in close collaboration with researchers from all over the world. Similarly, EST offers courses that are intellectually challenging while also stimulating reflection. Our courses are intrinsically relevant to the field of study, reflect ideas and norms expressed in contemporary literature, and are aligned with programme-wide learning objectives. This guide outlines the set-up and substance of the EST courses and overall programme. It also contains information on related topics, such as student supervision, testing procedures, and quality assurance.*

*We constantly strive to offer our students a modern, relevant, and interesting curriculum with sufficient challenge and depth. We hope that this programme rouses your curiosity, and that you find your time here both stimulating and gratifying.*

*On behalf of the MSc EST team, I wish you a pleasant time here!  
Kind regards,*

*Tessa Eysink  
Programme director of the Master's degree programme Educational Science and Technology*

## **Part A: Educational science as a discipline**

# 1. Educational science

## 1.1 What is educational science?

The main focus of educational science is on the learning and development of people. This might be the instruction of young children at primary school, of young adults during their vocational education, or adult employees in a company, such as firefighters or teachers receiving in-house training. Educational scientists investigate learning processes, preconditions for learning, learning environments, and educational resources with the aim of understanding, explaining and improving them. Broadly speaking, educational science is studied at different levels: the micro-level, the meso-level, and the macro-level.

### *Micro: Individual learner and class level*

This concerns the research, development, introduction and/or evaluation of teaching and learning processes, curricula and educational learning environments at the level of the individual and the group/class. Think, for example, of the development of new teaching materials, such as interactive videos, online simulations or game-based learning environments. Educational scientists pursue to investigate questions such as: Which learning processes are supported by using these technologies? What is sound pedagogy for teaching with them? How can teachers be prepared for working with such tools? How do we introduce them and how can we find out if they function satisfactorily and effectively? And which techniques should be used for evaluating the results of instruction in these cases?

### *Meso: Organisational and leadership level*

This concerns the research on and the development of the organisation, structure and set-up of schools, institutes and business networks. Educational scientists occupy themselves with such questions as: What are the challenges of establishing and maintaining a secondary level 'technasium' (pre-university school with a strong emphasis on engineering)? What are the effects of class size on children's learning in primary school? What subjects ought to be taught when training firefighters? How should they be taught, in which order, and what is the interrelationship between the contents of the subjects? What policies and systems can stimulate, support and enrich the continuing education of professionals such as police officers, bank employees, railway engineers, or teachers?

### *Macro: Policy and system level*

This concerns the relationship between education and society (career, labour market), including high level institutions and policymaking (e.g. high stakes assessment, curriculum reform). Educational scientists pursue such questions as: What learning is of most worth (and should therefore be emphasised in the curriculum)? What effects do educational reforms have on students' learning outcomes? How do Dutch children perform in mathematics compared with children from other European countries? What is the influence of block grant funding (in which the government grants schools freedom of spending) on the educational infrastructure? Which knowledge and skills should be tested during the school-leaving examination and how can that be done effectively and equitably?

As a discipline, educational science has a strong multidisciplinary character and multiple areas of application. Educational science programmes emanate from disciplines such as psychology, pedagogy, sociology, human resources development, educational media and technology, and policy and organisation studies.

## 1.2 Importance of educational science

Many educational scientists supervise or advise school children/students, teachers, school teams and organisations or companies on their educational challenges. Societal developments call for a continuous need for people who can plan, set up, execute and evaluate education. Below are several examples of situations in which educational scientists can make an important contribution.

*Please note that the word 'education' needs to be interpreted broadly: it might mean education in a traditional school context, but it could also mean instruction within companies or adult education or even in the informal learning setting. In all of these situations, there is a demand for specialists in professionalisation and staff training.*

Schools are increasingly given greater freedom in how they present themselves. In order to realise a desired profile, an educational scientist might be called on to support both teaching staff and management. An educational scientist might help contribute to the quality of the education, for example by helping teachers to devise a new profile or by designing new teaching material for this.

Testing seems to play an ever-increasing role in society. These days even children at pre-school are tested on their language skills. Similarly, teachers, doctors, or engineers in many countries must pass certification exams. Of course, it is essential that these tests are of sufficient quality so that they truly identify individuals with the necessary knowledge and skills for carrying out their profession. Educational scientists develop and evaluate tests for many kinds of target groups or situations.

Owing to both the rapid developments and scientific progress, knowledge is soon out-of-date. Lifelong learning is important to stimulate the knowledge society and employment in the Netherlands and beyond. Dutch trade and industry annually invest billions of Euros in education and training. Large companies often have their own department for developing and offering training to their staff to improve their performance or further their education. Educational scientists are able to develop, implement and evaluate such trainings. They may also engage in workplace instruction or in the rearrangement of the work and the workplace so that learning becomes an integral part of work.

Educational science is the science that strives to describe, comprehend, and interpret education with the aim of contributing to its improvement. Educational scientists can be found in many places of learning.

### 1.3 What educational science is *not*

A degree in educational science does *not* provide the qualifications to be a schoolteacher. While a background in teaching could be useful, it is not required for a degree in educational sciences.

For the most part, educational scientists work behind the scenes, contributing to knowledge-building and helping ensure that learning opportunities are appealing, effective and accessible. This can be done with people of all ages and backgrounds. This might be by studying learning processes and situations (for example by researching the effects of certain materials on children's learning achievement) or by directing them and/or intervening on them (for example by developing material that helps realise certain learning objectives). Good educational scientists are able to combine both activities. In this way, they contribute to the educational process, whether that be for the school education system or for in-company learning and development.

## 2. Educational Science and Technology (EST) at the UT

### 2.1 EST characteristics

The main focus of the Master's degree programme Educational Science and Technology (EST) is on the design and evaluation of learning scenarios in schools and organisations, where the scope is wide: from educating primary school children and young people in secondary and vocational education to in-service or on-the-job training for adult employees, such as nurses, teachers, civil servants, managers and leaders. EST students learn about theories of learning and assessment, educational technologies (e.g. serious games), effective training approaches, and learning interventions. Students also discover how to design and evaluate different learning scenarios and offer recommendations or solutions for practical problems.

Students opt for the EST programme, for myriad reasons, such as the desire to:

- Apply tools of educational science as a researcher, designer, and consultant;
- Grow professionally and personally in our 21<sup>st</sup>-century environment;
- Enter a programme that ranks among the best in its field;
- Pursue individual passions with a programme offering a highly customisable content;
- Prepare for a colourful career in an intercultural community;
- Benefit from exposure and access to outstanding teachers and researchers;
- Study contemporary educational science in the context of technological change.

The EST programme prepares students to work in two main contexts:

- EDU: Formal education settings, such as schools, where the emphasis is on learning, instruction and system effectiveness;
- HRD: Human resource development, focusing on learning scenarios in organisations.

#### **Systematic, design-oriented and impact-driven approach**

The EST Master's programme centres on three specific sets of competencies you will not find in other similar programmes. Graduates can become researchers, educational designers, or consultants. Many merge all three into their own personal career path. These three roles combined with our strong focus on technology and a highly customisable curriculum preparing graduates for employment in two key fields of work (Education and Human Resource Development) makes this a one-of-a-kind programme.

EST graduates are scientific educational professionals: experts who connect scientific research and educational design with practice. Their expertise is based on finding effective solutions for learning problems taken from practical contexts (in both schools and organisations) by using the tools of empirical research, a systematic approach, and often incorporating technology. The result of this approach is a design (or a set of designs), which is tested in the context of the problem to see if the solution contributes to improvement or innovation.

This systematic, technological, and design- and evaluation-based orientation characterises the EST programme and distinguishes our programme at the University of Twente from other education-related degree programmes in The Netherlands.

- *Domain orientation*  
EST students may specialise in either EDU or HRD settings, or develop expertise related to both. Graduates have a firm and broad knowledge of their chosen focal area(s), and related knowledge and skills that can be used productively and creatively in a range of contexts.
- *Applied character*  
In various courses during the programme our students address real-life educational issues. They gain experience applying scientific knowledge in practice, thus learning how to 'recognise' the newly acquired educational theories in practice and also how to apply these theories in real-life situations.
- *Academic rigor*  
Ample attention is paid to students' academic training. The programme challenges students to develop robust research skills, by conducting both qualitative and quantitative research. Students gain experience in writing scientific articles and put all these skills into practice during their final graduation project.
- *Diverse community*  
The EST programme attracts students from various backgrounds: international students, graduates from undergraduate degree programmes of Dutch research universities and universities of applied sciences (in Dutch: HBO), and professionals who wish to broaden and deepen their knowledge and skills.
- *Attention to the use of technology*  
In our teaching we also pay attention to the role of technology in learning processes. For example: To what degree does the kind and number of environmental characteristics influence the learning achievements of employees? And: What role can the computer play in the instructional process or with assessing educational effectiveness?
- *Design-oriented and problem-solving approach*  
The programme teaches how to analyse educational and training problems in a systematic way and how to design effective solutions for those problems. This includes careful analysis of the existing situation before developing processes for organising learning trajectories, designing media applications, or evaluating real-life innovations, programmes or policies. Graduates are able to systematically frame up, elaborate, augment, evaluate, and implement designs to support learning environments in various education and training contexts.

### **Career opportunities**

EST graduates have excellent job prospects in a variety of settings, for example, educational or training consultancy firms, academic publishers, corporate HR departments, schools, local or national government, or higher education. Our students normally find jobs within a few months of graduation. EST graduates typically apply for jobs such as:

- Education and training quality coordinator
- Educational or programme advisor
- Course developer
- Training consultant
- E-learning designer
- Developer of educational tools and materials
- Corporate trainer
- Educational policy maker

- School inspector
- Developer of educational software or serious games
- Employee at an educational broadcasting station

Alternatively, quite some graduates opt for careers in educational science research at a university or research institute.

## WHERE DO OUR GRADUATES WORK?

A few of the job placements enjoyed by our graduates include:

- Innovation Manager at Rabobank, the Netherlands
- Executive Business Consultant in Change Management, Communication and Training at Atos Consulting, the Netherlands
- Educational Advisor at Eindhoven University of Technology
- Learning & Development Project Manager at Oxfam GB, United Kingdom
- Policy Advisor at the sectoral organization for primary education
- Consultant / Trainer / Coach at Risbo-Erasmus University and Interaction Group
- Senior Training Advisor with Dutch Railway
- Researcher and consultant at Kessels & Smit, The Learning Company
- Educational Specialist at the Dutch Police Academy
- Professor of Applied Sciences at Saxion University of Applied Sciences
- Educational Quality Advisor at Amsterdam University of Applied Sciences
- E-learning Multimedia Consultant and Designer for Elka Remmers Consulting, The Netherlands
- ICT Educational Specialist at Institute for Physical Safety IFV
- Instructional Designer at University of South Australia, Adelaide, Australia

## Research

Students who are keen on doing more research, may find outstanding opportunities right here at the UT, in the various sections within the BMS faculty or at the university-wide Centre of Expertise in Learning and Teaching (CELT). Student assistantships, project vacancies, and PhD trajectories are all closely connected with the section's profiles of the participating lecturers. More information can be found on the websites of the four sections that are involved in EST:

- ELAN: [Section of Teacher Development](#)
- IST: [Section of Instructional Technology](#)
- PLT: [Section of Professional Learning and Technology](#)
- CODE: [Section of Cognition, Data and Education](#)

## 2.2 EST's goals

*EST's mission* is to graduate versatile professionals who leverage their academic and research competencies to fulfil the roles of researchers, designers, and consultants in education.

- Our graduates are comfortable engaging with technology in multiple ways:
  - as inputs (e.g. eye trackers, digital logs, video),
  - as processes (e.g. information processing, data analysis, machine learning)
  - as outcomes (e.g. creation of digital resources for teaching or learning)

- Our graduates are T-shaped professionals, i.e. those with broad and deep skills, in this case:
  - with broadly developed abilities to fulfil the roles of advisor, consultant, and designer,
  - in the (international) teaching and learning contexts of organisations or schools
  - which are supported by deep disciplinary, academic, and research competencies,
  - and are benefitted by internalisation of EST's
    - engineering approach
    - thirst for innovation
    - systems perspective
    - social norms
    - professionalisation (high standards for depth, completeness, and social aspects of performance)

To succeed on this mission, the programme has established the following Intended Learning Outcomes (ILOs):

- *Domain orientation*: Graduates have a firm and broad overview of education and of the specialty areas within, and specific expertise in one of the specialty areas that can be used productively and creatively in various related professional contexts.
- *Design competency*: Graduates are able to systematically frame up, fill in, augment, evaluate, and implement designs to support learning environments in various education and training contexts.
- *Research competency*: Graduates are able to systematically collect, analyse, and interpret research data, to draw conclusions there from, and on the basis of that advise or decide regarding possible alternatives and activities to be conducted, particularly in a design context.
- *Advice competency*: Graduates are able to advise (educational) organisations, in part based on the three competencies mentioned above, with regard to the implementation of better and more efficient learning environments and organisational as well as policy related arrangements for learning and teaching.
- *Academic reflection*: Graduates are able to critically reflect on processes, resulting products, and achieved results from systematic and well-chosen scientific, social-cultural, and ethical perspectives in such a way as to contribute to the professional development of the educational specialist and to a broadening and/or deepening of the scientific subject area.

## 2.3 EST's philosophy in action

EST's core values are to embrace challenge, foster life-long learning, and respect others.

- Embrace challenge means:
  - a. Commitment to solution-driving approaches to tackling complex issues
  - b. Maintaining a critical attitude
  - c. Openness to feedback and improvement
- Foster life-long learning means:
  - a. Ownership and accountability
  - b. Choice and opportunity

- c. Taking responsibility
- Embody respect means:
  - a. Appreciating (inter-)disciplinary perspectives and (multi-)cultural traditions
  - b. Cooperative, collaborative, inclusive
  - c. Building community

With the goal of achieving the mission described above, these core values are manifested throughout the programme, in visible ways:

- There are no separate research courses, design courses, advice courses or reflection courses. In each course, students work on multiple skills at the same time and learn how to integrate them. For developing a good design, students need research skills and advice skills to implement the design successfully. Powerful research yields recommendations for practice, based on the state-of-the-art research findings.
- At the same time, there are courses with strong theoretical orientations and assignments designed by the lecturers, and there are courses in which students choose a case to work on, that matches with one's interest and the skills the student wishes to practice.
- (Partly) parallel to the coursework, students begin early with the conceptualisation of their Final Project. Students prepare themselves for this Final Project by working in collaboration, supervised teams on their research proposal. They choose the Final Project in consultation with the programme's Final Project co-ordinator(s), and they design it in consultation with the prospective UT supervisor and (in case of an external project) with the educational organisation or company in which the project is situated. The EST programme has structural relations with several organisations and companies who often have projects available. The Final Project always has a strong research part and depending on the project it might also have a significant design, evaluation or advice component. During the Final Project, students are responsible for their own learning processes, but, of course, they will be supported by a community of peers and their university supervisors.
- Problem-based, project-based and challenge-based learning are major characteristics in the programme. Assignments are based on real problems from practice, and students will visit schools or companies. Parts of the EST trajectory take place in "live contexts" inside educational organisations or companies in which students learn together with and from professionals. This will also help students to orient themselves on their Final Project and of course on their future career.
- Depending on background, future goals and time limits, students can design their own curriculum to a certain extent. For example, those wishing to travel abroad for their Final Project, might choose to complete all courses in the first semester. The programme may be undertaken full-time or part-time. Students can choose four electives from the offering of multiple EST elective courses, or they can even request to take a course from another master's degree programme if they can demonstrate the relevance and contribution of it to their EST programme. To make deliberate choices in designing their learning routes, students seek guidance from the study adviser who is knowledgeable about possibilities and restrictions.

## 2.4 EST's programme outline

The basic structure of the 60 EC EST programme is given below (see Part D of this Programme Guide for course descriptions):

- 10 EC: Trending Topics in Educational Science and Technology
- 5 EC: Research Proposal
- 20 EC: Four Elective Courses
- 25 EC: Final Project

### September 2023 enrolment / full-time students: 1 year

Quartile 1A		Quartile 1B	Quartile 2A	Quartile 2B
Trending topics in educational science and technology 201200034 (10 EC)				
Team learning at work 201500010 (5 EC)	HRD & Technology in a live context 201600126 (5 EC)	Regulation and facilitation of workplace learning 201200031 (5 EC)	Leadership and organisational change 201200032 (5 EC)	
Designing learning & performance support 191970340 (5 EC)	4CID for complex learning 202200054 (5 EC)	Innovative technology-based learning environments 201400002 (5 EC)	Teacher learning and development 201200027 (5 EC)	
Learning and Instruction * 202300197 (5EC)		Learning and Instruction 202300197 (5EC)	Educational measurement 201500149 (5 EC)	
	<i>option to take this course in 1B (when you have Final Project)</i> Research Proposal EST 201200035 (5 EC)	<i>option to take this course in 2A (when you have Final Project)</i> Research Proposal EST 201200035 (5 EC)		
Info FP	Find a Final Project	Final Project EST 201200036 (25 EC)		

\* Retake of block 1A is in block 2A, not in 1B!

Global talent management 201500086 (5 EC)		HRM and innovation 201500087 (5 EC)	
		HRM and technology design 201500088 (5 EC)	

	<b>Core Course</b>
	<b>Elective courses</b>
	<b>Research Proposal</b>
	<b>Final Project</b>
	<b>Extra – elective courses from preferred partner - approved by Examination Board. (max. 2 to be taken by a student)</b>

With regard to the electives, the following applies:

- A student selects four elective courses (5 ECs each) out of the set of 10 available EST electives as presented in the table above.
- Instead of selecting the full 20 ECs from these 10 EST electives, a student may (in addition to at least two - i.e. min. 10 ECs - of these 10 elective courses) choose max. two - i.e. max. 10 ECs - from a set of three courses from another UT-BMS programme, which have been approved by the Examination Board and identified by the Examination Board as courses which are closely related to the educational science domain. These courses are:
  - Global talent management (201500086)
  - HRM and innovation (201500087)
  - HRM and technology design (201500088)

**Please note:** In terms of scheduling, these three extra elective course options may conflict with the EST courses (since they stem from other master's degree programmes at the University of Twente). So, students need to check the timetable AND the exam dates prior to the start of these courses.

*Detailed information on all 2023-2024 courses can be found in Part D of this programme guide or via the university's course catalogue:*  
<https://osiris.utwente.nl/student/OnderwijsCatalogus.do>

## 2.5 Formal Education (EDU)

The Formal Education (EDU) domain focuses mainly on learning and instruction, teacher and school development, school effectiveness, and ICT in a variety of formal and informal educational contexts.

Educational design involves the planning, development, and implementation of innovative learning scenarios. Effective implementation of these change trajectories at both the school and classroom levels requires teachers and schools that are ready for the implementation. Teacher professional development is therefore one of the elements that is addressed when designing, developing, and implementing effective learning environments.

There is an emphasis on the role of ICT (e.g., simulations, serious games, interactive apps) when designing learning environments. Measuring the effectiveness of the implemented educational innovations is essential, as is structural monitoring and assessment of education. Schools should be able to track the quality and results of their teaching, not just through student assessment, but also at the teacher and school levels.

Core questions in this field are:

- How can learning innovations be designed, implemented and evaluated?
- How can technology be used and integrated into education and what are the effects on students' learning in terms of knowledge, skills, motivation, etc.?
- How can schools and teachers be supported in the design, development and implementation of innovations at both school and classroom levels?

- How can teachers be empowered in their own professional development for implementing innovative (technology-based) learning innovations?
- Can school performance be improved by giving schools feedback on the level of their performance?
- To what degree do school leadership, school culture and the teamwork between teachers influence the effectiveness of schools?
- Do schools perform better as a result of government inspections or are the improvements only superficial?

In the full set of electives, three of the specialisation courses focus on the individual learner: “Designing Learning and Performance Support”, “Learning and Instruction” and “Innovative Technology-Based Learning Environments”. Innovative technology is central in these courses, which offer theoretical insights as well as ample hands-on experiences. The course “4CID for complex learning” focusses on developing a blueprint for the design of complex learning tasks. In the “Teacher Learning and Development” course the expertise of teachers and their roles in the learning process are discussed.

### **Acquired skills**

The EDU domain has an applied character in which the integration of research, design, and reflection skills is central. Having taken these courses, students will be able to:

- Understand and analyse different theories and paradigms related to learning and instruction, teacher and school development, school effectiveness and ICT in a variety of educational contexts as well as indicate what they mean for practice;
- Plan, design, and implement innovations to increase the quality of education and assess the effects of these innovations;
- Improve the performance of schools by taking school leadership, school culture and teamwork between teachers into account;
- Reflect on the various core issues in the field of education and as well as one’s own position on these issues.

## **2.6 Human Resource Development (HRD)**

Human Resource Development (HRD) focuses mainly on the learning and development of adults in the context of their professional work. Leadership, talent development and lifelong learning are important for people's employability and their participation in a knowledge society.

Companies and institutions invest billions in education and training. Large companies often have their own corporate department for HR development, and they offer training to their staff to improve their performance and professional development. Three of our elective courses address specific HRD-related themes: “Team Learning at Work”, “Regulation and Facilitation of Workplace Learning, and “Leadership and Organisational Change”. These courses all have a theoretical component, but in the course-specific assignments students will also develop and practice research, design, advice and reflection skills. In the fourth HRD-related elective course on “HRD & Technology in a Live Context” students work in teams on real HRD cases from organisations. These cases will focus on technology-enhanced learning from an HRD perspective, for example the implementation of blended learning in the workplace, the use of

social media for knowledge sharing within the organisation, assessment and/or evaluation of e-learning trajectories, and pros and cons of using Massive Open Online Courses (MOOCs). The aim is to provide the companies with an advice report. In this report, the latest and/or most relevant insights from scientific research and theories are presented. This course is a unique chance to apply what has been learned in the more theoretical courses, while at the same time it prepares participants for their Final Project.

Core questions in the HRD field are:

- How do people learn during their work?
- How do people become experts?
- How may one facilitate workplace learning and professional development?
- What are effective training programmes and how can they be evaluated?
- How can team and organisational learning be facilitated?
- How do organisations change, and how can HRD professionals be instrumental in this process?
- What is the role of new media in workplace learning?

### **Acquired skills**

In the field of HRD knowledge and research, approaches from a combination of disciplines are used to answer the core questions: psychology, educational science, business, human resource management, and sociology. In addition to its focus on current HRD research, this field also has an applied character in which the integration of research, design, advice and reflection skills is central. Having taken these courses, students will be able to:

- Comprehend and analyse different HRD theories, and to understand what they can mean in practice;
- Design innovative and effective interventions to enhance learning and development in a company or institution;
- Advise companies and institutions on questions related to their employees' learning and development;
- Conduct research on HRD problems;
- Use research to design effective learning interventions and to give solid advice;
- Reflect on the various core issues in the field of HRD and on one's own position on these issues.

## **2.7 EST in a part-time mode**

The one-year Master's degree programme EST can be studied taken full-time or part-time. In the latter case the programme lasts 1.5 till 2.0 years.

In this regard (particularly for facilitating this part-time mode) the following applies:

- All EST master's courses (except the three extra courses which stem from other master's degree programmes!) are (dominantly) scheduled on two fixed days in the week, namely Mondays and Tuesdays.
- Classes of a specific course take *as much as possible* place on the same day throughout the quartile.

Thus, 'part-timers' are facilitated in arranging two dedicated study days, which can be crucial for those with existing family or employment responsibilities.

Note: The nominal study load in the part-time mode depends on the selected courses. As such, it is possible that study load is not always evenly distributed.

For more information about studying EST in part-time mode, see: <https://www.utwente.nl/en/est/masterest/educational-science-and-technology-in-part-time-mode.pdf>

## 2.8 Doctorate programmes

After completing the Master's degree programme, students may opt for a career in scientific research. This involves spending four years studying a particular research area in depth. An integral part of this is writing the PhD thesis, and presenting and defending the research in public. After successfully completing a PhD, researchers are awarded the title of Doctor (Dr.). Unlike in many other countries, most PhD researchers in the Netherlands are paid employees, often working directly for the university. Some PhD researchers come to the Netherlands with an international scholarship.

In addition to the regular PhD positions offered on the UT vacancies website, Twente Graduate School offers several integrated master/PhD programmes.

More information about the doctoral programmes at the University of Twente can be found on the website: <https://www.utwente.nl/en/education/tgs/>

## 2.9 University of Twente characteristics

Irrespective of which programme you will study at the University of Twente, all our Master's degree programmes strive to train entrepreneurial academics who are able to address and solve social issues by conscientiously pinpointing problems, investigating possible solutions or designing, developing and evaluating new products or applications. We emphasise that our students, next to knowing their way around in their own discipline, are capable of working together with professionals from other disciplines. After all, many social issues demand a multidisciplinary solution.

We aim at educating students to become excellent professionals who possess both scientific as well as professional competences.

Therefore, the following characteristics apply

- *Small-scale instruction*  
Next to the more or less traditional lectures, instruction is particularly organised in small groups, interactive workshops, seminars and practicals. In our opinion, small-scale and strongly supervised (contact-intensive) instruction is of paramount importance to the

development of professional and academic skills. Students carry out (individual and small group) assignments where collaborative, evaluative and other social and communication skills play an important role.

- *Strong connection between education and research*  
The contribution of faculty members to the Educational Science and Technology programme is recognised and highly valued, both nationally and internationally. The Master's degree programme is strongly linked to topical research that is conducted in the departments concerned, and lecturers draw many examples from their own research during their lectures. It also occurs that students actively contribute to the lecturers' research, e.g. during their graduation phase. The subjects and assignments of the Master's degree programmes are often linked to current research projects within the research lines of the departments. In this way you will be initiated in the professional and academic field of action.
- *Guest lectures by well-known researchers or experts from the work field*  
In recent years various (internationally) famous researchers have honoured the programme with a visit, in many cases delivering a lecture or a lunch seminar. Also, in several courses professionals share their knowledge and experiences or present real-life challenges for students to work on.
- *Open and informal atmosphere between lecturers and students*  
The programme's atmosphere (educational climate) can be characterised as pleasant and inclusive. Communication between lecturers and students is quite informal, but respectful.
- *Extensive student supervision*  
The EST programme has been designed in such a way that you yourself are to some extent responsible for your study trajectory and your study progress, and you are offered substantial freedom to make intrinsic choices yourself. This could imply independently devising subjects for assignments, choosing your specialisation, opting for spending study time abroad, and the theme of your final research project. It is important that your choices are made consciously and are well-considered. In this regard, you may count on a good tutor to help you making the right choices and be there for you.
- *International possibilities for studying abroad*  
We think it is important that students broaden their academic horizon during their studies. In this respect, we support ambitions that include spending some time abroad (e.g. taking courses, participating in on-going research). Please feel invited to contact your study adviser for discussing your ambitions and possibilities.
- *Encouraging student activism*  
The University of Twente fervently encourages all kinds of student activism (ranging from membership of a committee or board, to assisting university staff or starting a small business). It is the university's firm belief that students will benefit from extra-curricular activities.
- *Encouraging entrepreneurship*  
For beginning entrepreneurs with innovative ideas, the UT has introduced the so-called TOP programme (Tijdelijke Ondernemers Plaatsen; *Temporary Entrepreneurs Positions*), which helps to bridge the first, usually most difficult year of a new enterprise with basic funding, support and advice.

**What does this mean to you?**

*Our students are enterprising, curious, dare to take risks, have self-knowledge and insight into the tasks, functions and roles that a job entail. Characteristics such as self-discipline, personal responsibility, using one's initiative and independence are important to us. Our students are open to the contributions made by people with other expertise, other backgrounds, and other methods.*

## **Part B: Admission and enrolment to the Master's degree programme EST**

### 3. Admission criteria and application procedures

#### 3.1 Admission criteria

The programme's Admission Committee assesses all applicants to the MSc programme Educational Science & Technology (EST) on an individual basis. The assessment of the applicant's skills is based on formal as well as content-related admission criteria.

<https://www.utwente.nl/en/education/master/programmes/educational-science-technology/admission/>

The *formal criteria* are as follows:

- A. Bachelor's degree or equivalent
- B. **Note:** for international students (i.e. non-Dutch students) only:  
IELTS minimum overall score of 6.5 on the IELTS (where each minimal sub score is 6.0) or equivalent.  
<https://www.utwente.nl/en/education/master/how-to-apply/>

The *content-related admission criteria* require that a student possesses and/or demonstrates evidence on sufficient knowledge and skills concerning the following:

- C. The content of the domain of educational science and technology.
- D. Research methodology.
- E. Research techniques, including the use of statistics for data analysis.

#### *Ad C. Content of the domain*

The domain of Educational Science and Technology can be characterised by the following: a field that encompasses the analysis of learning and performance problems; the design, development, implementation, evaluation, and management of educational and training processes, resources, and trajectories, intended to improve learning and performance in a variety of settings. A student meets the domain-specific admission criterion if he/she possesses a Bachelor's or Master's level degree in a domain that is similar or related to the domain of this definition, and/or if he/she has substantial relevant work experience from which he/she has mastered the aforementioned conceptual knowledge.

#### *Ad D. Research methodology*

This refers to the main concepts, procedures, and methods used in social science research, and which aim at systematic, conceptual (literature) analysis, modes of data collection, data analytical schemes, and procedures for interpretation of findings, in order to better understand social phenomena and processes, and/or to support all levels of making choices in and for social reality. This methodology supports the systematic design, execution and evaluation of research activities. A student's basic mastery of this methodology should be proven by courses which he/she has taken in this area, and/or reports of research projects or activities he/she has been involved in substantially.

*Ad E. Research techniques, including the use of statistics for data analysis*

This area is dedicated to the skills and understanding of techniques for collection and for analysis of both quantitative and qualitative data. If a student masters this area he/she is able to apply descriptive statistics (distribution, correlation, regression, cross tabling), theory of probability (calculation, expectation, variance, binomial distribution), and aspects from inductive statistics (average based conclusions with known population deviation). Experience with R, SPSS or a comparable computer-based statistical package is part of this mastery. Evidence of this can be presented by content review of courses which he/she has taken, and/or use of these techniques in research, demonstrated by means of a report or an article.

### 3.2 Evaluation of the admission criteria

On behalf of the programme director, the programme's Admission Committee will review the information and documents presented by each applicant, and they will decide whether a student meets all stated criteria sufficiently.

In order to be considered for admission, an applicant has to meet the aforementioned *formal* criteria (A and B). Evaluation of the *content-related* admission criteria (C, D and E) may result in one out of two alternative decisions by the Admission Committee:

1. If a student meets all content-related criteria he/she will be admitted to the EST Master's programme directly and unconditionally.
2. If a student does not (partly) meet the content-related admission criteria, he/she will be offered the opportunity of taking (a part of) the EST pre-Master's programme.

In addition to the generic information, the following detailed options apply:

- 1) Students with a bachelor's or master's degree from a (Dutch) university of applied sciences (in Dutch HBO-instelling) enrol in the full (30 ECs) version of the pre-Master's trajectory.
- 2) Students with a bachelor's or master's degree in Arts or Science (in Dutch: Alfa- or Beta opleiding) from a (Dutch) research university enrol in the full (30 ECs) version of the pre-Master's trajectory.
  - a. These students lack the required domain-specific (Educational Science) knowledge. They therefore have to complete the (15 ECs) domain-specific pre-Master's courses, plus
  - b. Despite their assumed academic level in reasoning and doing research, these students miss the social science competences in this regard. They therefore also have to complete the research methodological (15 ECs) pre-Master's courses.
- 3) Students with a bachelor's or master's degree in Social Sciences (in Dutch: Gamma- of Sociale wetenschappen) from a (Dutch) research university will, *depending on their specific prior education*, usually only take specific components (15 ECs) of the pre-Master's trajectory.

In general, it is assumed that these students possess sufficient generic academic and research methodological competences. They are therefore **exempted** from the pre-Master's courses *Research Methodology and Descriptive Statistics, Academic Writing, and Inferential Statistics*. They do need to take the remaining 15 ECs programme (i.e. the pre-Master's courses: *Designing for Learning in Schools and Organisations, and Research Studio*).
- 4) Students with **a bachelor's or master's degree from specific – domain related - (research university) programmes** (e.g. Educational Sciences, some sub-domains in Pedagogy or Psychology) may be exempted from the pre-Master's trajectory fully. This is assessed in detail based on the documents the applicant must upload in the UT application system.
- 5) UT-BMS students who have successfully completed the TOM-modules "Professional Learning in Organisations" (202001431) and/or "Psychology in Learning & Instruction" (202000344) may also meet the EST entry requirements for direct enrolment. These students have to contact the EST programme staff, Ms. Yvonne Luyten-de Thouars (e-mail: [y.c.h.dethouars@utwente.nl](mailto:y.c.h.dethouars@utwente.nl)) or Ms. Marlies Tijhuis (e-mail: [m.e.tijhuis@utwente.nl](mailto:m.e.tijhuis@utwente.nl)) if they intend to pursue their studies in EST after their current bachelor's programme.

Note: full information on the pre-Master's trajectory can be obtained from Chapter 4 of this programme guide.

### 3.3 Application procedures

Depending on their prior education, applicants are subject to the following procedures:

a. *UT EST pre-Master's students*

Having completed the EST pre-Master's programme, you automatically qualify for a direct and unconditional access to the Master's degree programme EST. Formal registration for the Master's degree programme EST must be submitted via Studielink. After that, and upon you having passed all the pre-Master's courses successfully, the EST programme staff will inform the UT's Central Student Administration (CSA) whether you have satisfied all the requirements for registering to the EST Master's degree programme. Then your pre-Master's registration will be converted into the master's EST enrolment.

Note:

You have to renew your formal registration at the UT every year! CSA will remind you in this respect by sending you an e-mail message with a link to the digital re-enrolment form annually.

b. *Other UT Bachelor's students*

This mostly implies that you have to take the domain-specific courses of the pre-Master's programme OR one or two specific modules from the University of Twente Psychology bachelor's programme<sup>1</sup> that you could follow during your bachelor's, in order to be prepared optimally for the master's degree programme in Educational Science and Technology. You will need to inform both the Educational Affairs Office (BOZ) of your own programme as well as the EST programme staff if you intend to pursue your studies in EST. Depending on your specific situation, they will inform you about the correct registration procedure.

c. *Other applicants*

On the basis of detailed information on your prior education, the Admission Committee of the EST master's degree programme will assess how your pre-Master's trajectory will look like. In any case you have to apply **online** via:  
<https://www.utwente.nl/en/education/master/how-to-apply/>

Note:

Although most applicants first have to take the EST pre-Master's programme (or parts thereof), it has to be underlined that there is NO separate application procedure for the pre-Master's programme.

**You have to apply via the master's application website!**

---

<sup>1</sup> **These modules are: Professional Learning in Organisations (202001431) and/or Psychology in Learning and Instruction (202000344)**

*Diversity of application deadlines* (depending on nationality, visa, housing)

In order to facilitate a smooth start of your studies at the University of Twente, your application has to be submitted before the stipulated deadlines:

<http://www.utwente.nl/en/education/master/admission-requirements/application-deadlines/>

Please bear in mind that you may apply even if you not yet formally obtained your prior (bachelor's) degree (in this regard, we expect that you will obtain your bachelor's degree officially before 1 September or 1 February).

If you have any questions regarding the application procedures and the application form, please contact:

University of Twente, Student Services (Admission Office),

Building: Boerderij: Contact Centre

Tel: (+31) (0)53 489 2124

E-Mail: [studentservices@utwente.nl](mailto:studentservices@utwente.nl)

If you have any questions regarding the content of the EST master's or pre-Master's programme, please contact the EST programme staff:

Ms Marlies Tijhuis

Building Ravelijn, room 3268

Tel: (+31) (0)53 489 8604

E-Mail: [m.e.tijhuis@utwente.nl](mailto:m.e.tijhuis@utwente.nl)

Ms Yvonne Luyten-de Thouars

Building Ravelijn, room 3270

Tel. (+31) (0)53 489 1117

E-mail: [y.c.h.luyten-dethouars@utwente.nl](mailto:y.c.h.luyten-dethouars@utwente.nl)

## 4. Pre-Master's programme

Many students wishing to be admitted to the master's programme Educational Science and Technology (EST) will first have to complete (parts of) our pre-Master's programme. Whether you will have to take the full pre-Master's programme, a partial pre-Master's programme or no pre-Master's programme at all will depend on your previous qualifications (See: Chapter 3). All students will be evaluated by the programme's Admission Committee individually on a portfolio base.

Please note:

- The pre-Master's courses are taught in English.
- All assigned pre-Master's courses must be successfully completed in order to be admitted to the Master's programme Educational Science and Technology!
- During the pre-Master two strict rules apply:
  - Pre-Master's students have a maximum of two chances to pass a course (max. 2 attempts per exam)
  - All pre-Master's courses must be completed within one year (max. 1 year registration period)
- The aforementioned rules also imply that you cannot participate in the pre-Master's programme again in subsequent years.

### 4.1 Programme Outline

The full (30 European Credits / ECs) pre-Master's programme comprises of both domain-specific (Educational Science and Technology) courses and courses which address generic academic and research methodological competences.

The programme prepares a student for applied, design or evaluation-oriented, scientific reasoning and research during his/her Master's trajectory Educational Science and Technology.

Therefore, all assigned pre-Master's units of study (to be decided by the Master's programme Admission Committee) must be successfully completed before one can formally begin the Master's programme.

The pre-Master's programme has two terms of enrolment (September and February).

Therefore, the following structure applies:

**Full-time programme = ½ year = one semester**

September enrolment		February enrolment	
Semester 1		Semester 2	
Quartile 1A	Quartile 1B	Quartile 2A	Quartile 2B
Research Methodology and Descriptive Statistics (5 EC)	Inferential Statistics (5 EC)	Research Methodology and Descriptive Statistics (5 EC)	Inferential Statistics (5 EC)
Designing for Learning in Schools and Organisations (5 EC)	Research Studio (10 EC)	Designing for Learning in Schools and Organisations (5 EC)	Research Studio (10 EC)
Academic Writing and Reading (5 EC)		Academic Writing and Reading (5 EC)	
15 EC	15 EC	15 EC	15 EC

Self-study pack. EST

Self-study package EST

Special regulations in the pre-Master's programme that deviate from bachelor's or master's degree programmes:

### Registration and limitations in the pre-master's programme

1. Pre-master students have a maximum of two chances to pass a course. Within one semester two chances are offered. (In a few cases where a student uses his/her second attempt in the next semester (e.g. because of illness at the time of the offered opportunities), this implies a ½ year study delay, with a max. of one year enrollment!).

*When a student does not pass a course within two attempts, he/she will be excluded from the programme.*

2. All pre-master courses must be completed within one year. This is the maximum registration period in the pre-master's programme.

*When a student does not pass all courses within one year, he/she will be excluded from the programme.*

- A student can only enter the master's programme after completing all pre-master courses successfully.
- The aforementioned rules also imply that you cannot participate in the pre-master's programme again in subsequent years.  
Note: The rules mentioned above apply to both full-time and part-time students
- Moreover, a student will not be admitted to the pre-master's programme Educational Science and Technology in case he/she, within the framework of another University of Twente pre-master's programme, already reached the maximum of two sittings for an exam of the following units of study: Research Methodology and Descriptive Statistics, and/or Inferential Statistics, and/or Academic Writing.

### *Language in the pre-Master's programme*

The language of communication in the pre-Master's programme Educational Science and Technology is English.

This premise however requires additional explanation:

- Study materials are in English.
- Classes (lectures, seminars, workshops, practicals, and others) are taught in English.
- Exams and assignments are composed in English and students have to complete all exams and assignments in English.
- Presentations have to be prepared in English
- Oral communication between a student and an instructor may revert to Dutch in case no non-Dutch students are involved.
- Students are supposed to be aware of the aforementioned rules with regard to the use of English and Dutch.

### *Self-study package*

In order to prepare and assist (potential) students prior to and during their pre-Master study trajectory, we offer an online self-study package: <https://www.utwente.nl/en/est/selfstudy/>

This package contains study materials which cover the fundamentals of the topics and themes which are dealt with in both our pre-Master's as well as in our master's degree programme and we think that this self-study package will prepare students best for participating in our on-campus course offer.

This self-study trajectory is not an official prerequisite to enter the pre-Master's programme, but relevant and necessary prerequisite knowledge will be offered in the self-study trajectory. In other words: courses in the pre-Master's programme build on the literature that is offered in the self-study.

We therefore highly recommend all applicants of the pre-Master's programme that they read the literature that is offered in the self-study trajectory, that they watch the accompanying videos in which the literature is explained, and that they (upon availability) work on the self-study assignments, to make sure that all prospective students are fully prepared when enrolling in our pre-Master's programme!

## 4.2 Pre-Master's programme in a part-time mode

Basically, the pre-Master's programme is a full-time programme with a study load of 30 EC that can be studied and completed in half a year. This implies the following: there is no formal part-time variant, but it is possible to spread the pre-Master's courses to be taken over a period of max. 1 full academic year. In this part-time mode the courses must be taken in a specific order (see below). We recommend that students who opt for this part-time study plan [first consult our study adviser](#) (Ms Yvonne Luyten-de Thouars / e-mail: [y.c.h.luyten-dethouars@utwente.nl](mailto:y.c.h.luyten-dethouars@utwente.nl)) in order to discuss the study plan with regard to the student's particular situation.

During the EST Introduction Day you indicate on your personal study plan whether you take the pre-master programme in full-time or part-time mode.

**Part-time programme = 1 year = two semesters**

Self-study pack. EST	Semester 1		Semester 2	
	Quartile 1A	Quartile 1B	Quartile 2A	Quartile 2B
	Research Methodology and Descriptive Statistics (5 EC)	Inferential Statistics (5 EC)	Designing for Learning in Schools and Organisations (5 EC)	Research Studio (10 EC)
Academic Writing and Reading (5 EC)				
	10 EC	5 EC	5 EC	10 EC

Self-study package EST

For more detailed information about studying EST in part-time mode, see: <https://www.utwente.nl/en/est/masterest/educational-science-and-technology-in-part-time-mode.pdf>

## 5. Costs

### 5.1 Tuition fees

The University of Twente applies both statutory tuition fees as well as institutional tuition fees. The tuition which has to be paid basically depends on:

- the status of your enrolment (e.g. pre-Master's or Master's degree student, part-time vs. full-time)
- your nationality (Dutch and/or European Union (EU/EEA) vs. non-EU/EEA)

The exact amounts are indexed annually.

Full information can be obtained from:

<https://www.utwente.nl/en/student-services/money-matters/tuitionfee/>

Next to the tuition fees, you need to bear in mind the following annual costs:

- Study materials (approx. € 400 - € 500)

### 5.2 Cost of living

As a guide, a single student will need approximately € 1000 per month for (on-campus) accommodation, study materials, and general living expenses. See for more details:

<https://www.utwente.nl/en/education/master/costs-of-studying/>

### 5.3 Scholarships and grants

The University of Twente has several scholarships for students completing UT postgraduate programmes. These scholarships vary from government grants to funding by organisations or private people. In addition, faculties and the University of Twente Scholarship (UTS) fund offer a *limited* number of scholarships for excellent students who get directly accepted into the master's programme

Please note:

- students who have to do pre-Master's courses first cannot apply for UTS, also not after having completed the pre-Master.

All scholarships require that all UT application procedures are fully completed before applying. Applying for a scholarship is possible as soon as you have received a letter confirming admission to the master's programme. Please note that some scholarships are for students of specific nationalities or specific educational programmes. More information can be found at:

<https://www.utwente.nl/en/education/scholarship-finder/search/>

## **Part C: General information**

### **NOTE:**

The information provided in this section may be subject to changes. Therefore, please check the websites of university's Centre for Educational Support (Student Services) (<https://www.utwente.nl/en/ces/>) for the most up-to-date information.

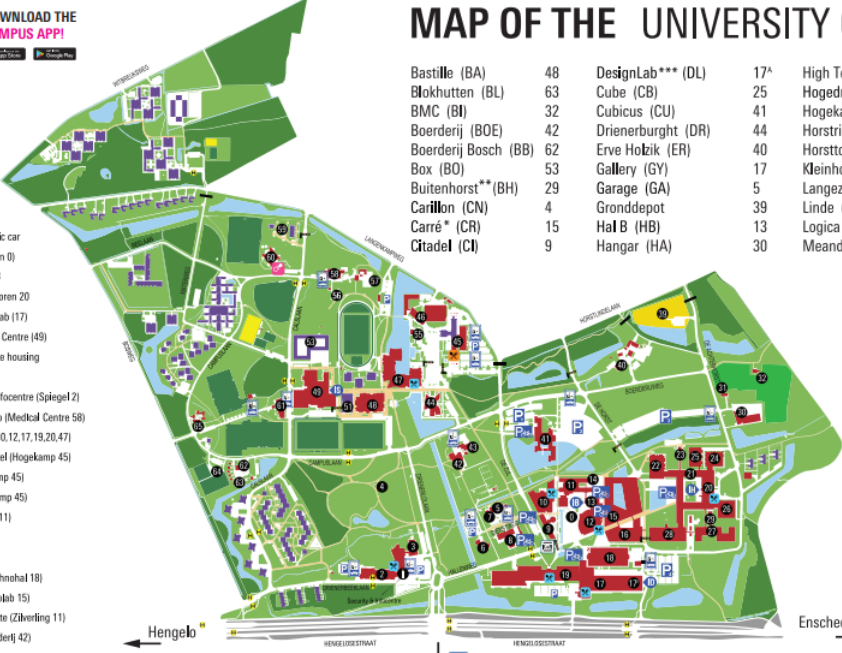

## 6. Practical issues

**UNIVERSITY OF TWENTE.**

## 6.2 Faculty introduction

In order for you to prepare yourself adequately for your pre-Master's or Master's degree programme and to meet your fellow students, a one-day faculty introduction is organised shortly before the programme's start (i.e. during the last week in August or the first week of the second semester in January/February).

During the introduction day the focus will be on the presentation of the master's degree courses, the pre-Master trajectory, and composing the individual study plan.

Furthermore you will meet your lecturers, fellow-students, and the educational support staff, and you will be shown round the faculty buildings, and register for Komma (the EST study association).

After attending this introduction day, you will be all set to start your studies in EST.

## 6.3 Purchasing study materials

You will need books and/or other study materials for every course.

### *Buying books*

On the website of study association Komma (<https://www.komma.utwente.nl/est-books/>), you can find a list of the text books that are compulsory or recommended before each first quartile. You can order these books with a discounted price through Komma.

If you wish to order your books via Komma, you need to register yourself as a member. This can be done online at <https://www.komma.utwente.nl/membership-signup>. The books will be delivered at your desired address (in The Netherlands) for free. Apart from discounted book prices, membership of Komma has numerous other benefits (see below).

Alternatively, you can order your books through a regular book store (or online via e.g. [www.studystore.nl](http://www.studystore.nl), [www.bol.com](http://www.bol.com) or [www.amazon.co.uk](http://www.amazon.co.uk)). These also offer second-hand books.

Please note that some books take longer to be delivered. If you want to have your books on time (before the start of the first lectures), you'll need to order your books on time (i.e. 2-3 weeks in advance). Many books that teachers have designated as "compulsory literature" can also be found in an especially reserved part of the university's library.

### *Other study material*

Most other study material is made available electronically, via the Canvas site of each course (Canvas is the digital learning environment used by the UT).

### ***Study & Alumni association Komma***

Each study programme has its own study association and for Educational Science and Technology that is Komma. At the same time, Komma is also the alumni association of EST graduates. This combination is unique at the UT, as study and alumni associations are

usually separate organisations. By uniting students, alumni and staff in one association, Komma makes it easy to find others with shared interests within the broad domain of EST. Komma is the meeting place for students and alumni where professional skills are honed and where mutual relations and contact with the faculty are kept up.

#### **Connect - Share - Discover**

These are the focal points that Komma revolves around. *Connect* is about linking students with alumni. *Share* is about sharing knowledge, skills, experiences and inspiration. *Discover* refers to discovering new ideas, concepts and opportunities in the education, learning & development industry. These three key pillars are also closely interconnected. For example, sparring with one another can be thought of as both connect and share, and inspiration day can be grouped under share and discover.

For more information, see: <https://www.komma.utwente.nl/home>

## 6.4 Student card

The student card of the University of Twente is a proof identity for the University of Twente and a proof of enrolment. You have to show the student card on request when using university facilities, like attending lectures, taking exams, visiting the libraries, etc.

#### **When will you get a student card?**

As soon as your enrolment is finalised by the Central Student Administration (CSA), and you have uploaded your digital passport photo in *Osiris Student*, you will receive your student card by post. Make sure that CSA has your correct address.

#### **Uploading digital passport photo in *Osiris Student***

In *Osiris Student* you can upload your digital passport photo as follows.

- Go to *Osiris Student*, and log in with your login name and password
- Choose the option 'upload passport photo'
- Choose the option 'Browse' in order to select a file
- Your digital passport photo is uploaded

#### **The student card can be used as**

- Proof of enrolment as a student at the University of Twente. (An additional declaration of enrolment that can be used to prove for which programme and for which period you are enrolled (for example as proof for an Insurance company), can be obtained separately on request, from Student Services.)
- Library card.
- So-called Union Card (if you indicated that you want to use the sports and/or culture facilities of Enschede, the card will also function as Union Card). See the website <https://su.utwente.nl/en/union-services/student/unioncard/> for more information about the Union Card.

For details on how to use the student card, what to do in case of loss or theft, transfer to another degree programme, or termination of your studies, please visit the Student Services website. <https://www.utwente.nl/en/education/student-services/>

You also may visit, call or email the Student Services office:

Location	Contact Centre: building Boerderij
Opening hours	Monday – Friday from 10:00 – 16:00 hours
Telephone	(+31) (0)53 489 2124
Mail	studentservices@utwente.nl

## 6.5 Communication and information

One of the things you will notice when you decide to study at the University of Twente is the multitude of means of communication the university, the faculty and your programme uses to communicate with you, be it directly or indirectly. It starts as soon as you pre-enrol for the University of Twente. As an early registrant, you will be given your own UT e-mail address, username and password that allow you to surf the net via the university. The internet and e-mail are by far the most important means of communication for both the programme and the faculty.

### *E-mail*

E-mail is used for rapid communication between the programme or an individual lecturer and an individual student or groups of students. *Make sure to read your UT-email regularly.*

UT students generally have <studentname>@student.utwente.nl as their e-mail address, e.g. h.j.pieters@student.utwente.nl (exceptions can be made for students with the same initials and last name).

You can find a list of e-mail addresses of UT staff via the home page of the UT:

<https://people.utwente.nl/>

### *Faculty's and programme's websites*

The website of the Faculty of Behavioural, Management and Social Sciences (BMS) is: <https://www.utwente.nl/en/bms/>

Also, each programme has its own website. The website of the EST programme is: <https://www.utwente.nl/en/est/>

### *Canvas: the digital learning environment of the UT*

Canvas is the digital learning environment of the University of Twente and can be found at <https://www.utwente.nl/canvas>.

On Canvas you also will find the EST programme site that serves as the **EST info channel**. This Canvas site publishes announcements, colloquia, vacancies, the overview EST final projects, and news from the student body in the EST programme committee:  
<https://canvas.utwente.nl/courses/3405>

*Osiris: the student information system*

In Osiris students can consult a wealth of information: the list of addresses, grades, the teaching catalogue with information on e.g. courses and minors, and information regarding tutors or study advisers. You also use Osiris to register for courses and exams:

<https://www.utwente.nl/en/educational-systems/>

*MS Teams: the online communication and co-operation platform*

Teams is used for easy communication, chatting, video meetings, sharing documents, etcetera by both students and staff of the UT.

## 6.6 Timetables

The Faculty of Behavioural, Management and Social Sciences (BMS) operates with a term (semester) system, whereby each academic year is divided into two terms (semesters). Each term consists of two blocks (quartiles). A block is usually divided into eight weeks of lectures, and two exam weeks.

For the timetables: <https://rooster.utwente.nl/>

The timetables for a block (quartile) will be online a couple of weeks prior to the start of each block (quartile). You can select your own study programme's timetable per quartile.

## 6.7 Lectures

A typical lecture day has 9 periods. The 5<sup>th</sup> period, from 12.45 - 13.30 hrs. is the lunch break (where no lectures are scheduled).

1 <sup>st</sup> period:	08:45 - 09:30 hrs.
2 <sup>nd</sup> period:	09:45 - 10:30 hrs.
3 <sup>rd</sup> period:	10:45 - 11:30 hrs.
4 <sup>th</sup> period:	11:45 - 12:30 hrs.
5 <sup>th</sup> period = lunch break:	12:45 - 13:30 hrs.
6 <sup>th</sup> period:	13:45 - 14:30 hrs.
7 <sup>th</sup> period:	14:45 - 15:30 hrs.
8 <sup>th</sup> period:	15:45 - 16:30 hrs.
9 <sup>th</sup> period:	16:45 - 17:30 hrs.
10 <sup>th</sup> period = dinner break:	17:45 - 18:30 hrs.
11 <sup>th</sup> period:	18:45 - 19:30 hrs.
12 <sup>th</sup> period:	19:45 - 20:30 hrs.
13 <sup>th</sup> period:	20:45 - 21:30 hrs.
14 <sup>th</sup> period:	21:45 - 22:30 hrs.

The timetable indicates how each course is taught. (Note: Officially speaking, we call a course a 'study unit'. This term is also used in the Dutch Higher Education and Research Act (the so-called WHW)).

In the timetable you can see for each course which type(s) of course activity are offered (e.g. lecture, tutorial, presentation and exam).

## 6.8 Enrolling in courses

*Enrolment for the courses via Osiris*

You must enrol for each study unit (i.e. course) on:

**<https://osiris.utwente.nl/student/StartPagina.do>**

Each course is listed into Osiris well in advance to allow you to register for it. You will need to register in time in order to get access to the course's Canvas site, where you can see the course's details and to read optional announcements from the involved teacher prior to the actual start of the course. So, register in time and don't wait until the very last moment!

See when registration periods are open: <https://www.utwente.nl/en/education/student-services/education/courses-and-modules/>

Should you not be able to register or de-register for a course yourself, inform your Educational Affairs Office (BOZ) as soon as possible, by e-mail (BOZ-EST@utwente.nl). This will allow them to take action if necessary.

You will need an account to access the courses. Prior to the start of your studies at the University of Twente, the university's Department for Information Technology (ICT) will provide you with a username and password. The password will be the same as the one you originally received for accessing the UT network. You were informed about this in a letter.

If you are still having difficulties, contact the ICT Helpdesk (phone: 053 4895577). Only in case where (de-)enrolling yourself in a course via Osiris is impossible, you may contact the Educational Affairs Office (for EST: Huub Engbers):

[BOZ-EST@utwente.nl](mailto:BOZ-EST@utwente.nl);  
telephone: (+31) (0)53 489 4122;  
room: Citadel H428.

## 6.9 Exams (including – final – papers)

- Please note that if you are registered for a course via Osiris, you are automatically registered for the first attempt and the resit of the course's exam(s)!
- In case you pass the first attempt, you will be automatically deregistered for the resit.
- In case you decide NOT to use an exam attempt, you should de-register from the exam via Osiris! De-register timely, i.e. till one day before the exam date (read: till 24:00h. of the day prior to the exam date).

### Enrolment Periods (2023-2024)

1st quartile	01 August 2023 up to and including 3 September 2023
2nd quartile	16 October 2023 up to and including 12 November 2023
3rd quartile	08 January 2024 up to and including 6 February 2024
4th quartile	01 April 2024 up to and including 28 April 2024

Please also check: <https://www.utwente.nl/en/education/student-services/education/courses-and-modules/>

When you encounter problems with (de-)registering for a course yourself, please contact the Educational Affairs Office via [BOZ-EST@utwente.nl](mailto:BOZ-EST@utwente.nl)

All regulations concerning registration, cancellation and *force majeure* (i.e. circumstances beyond one's control) go via the Educational Affairs Office (BOZ) and **not** via the lecturer responsible for that specific exam.

### *Rules during the actual examination*

With respect to written tests, there is a set of detailed procedures and rules of order that have to be followed. Detailed information on this can be obtained from the rules and guidelines as stipulated by the Faculty's Examination Boards:

<https://www.utwente.nl/en/bms/examboard/regulations/>

---

### *Rules after the examination*

Period for marking exams	Except in instances of force majeure, exam results are announced within fifteen (15) working days after the examination. If the results are not known within one week before you are to re-sit an examination, you may request the Examination Board to arrange the possibility to re-sit an exam at a later point in time.
Requesting to see your exam paper	Your exam paper remains in the possession of your lecturer.
Inspection of your exam	For a period of twenty (20) working days, starting on the day on which the results are announced, you may, upon request, inspect your own graded work. In case the teacher organises a scheduled, joint inspection session, you should attend that meeting to inspect your work.
Period of storage of exams	The examiner sees to it that written exams are kept for at least two years after the examination date.

### *Oral examinations*

An examiner may decide to hold oral examinations at a time to be determined by the examiner or examiners in consultation with you. Normally this will be arranged within one month following completion of the course (holiday months not included). An oral examination will not exceed two hours. The examiner is allowed to examine more than one student simultaneously, provided none of the involved students raises objections. An oral examination is a public event unless the Examination Board or the examiner has decided otherwise, or the student raises objections against publicity.

### *Overview of grades*

Via Osiris you can get an overview of e.g. all your exam marks or grades in a specific academic year. Once an exam has been marked and processed by the Examinations Office, the results are made known to you as soon as possible. If you passed a subject but you detect that the mark has not been processed in Osiris, please contact the Examinations Office as soon as possible.

### *Re-sit exams*

The programme offers to sit for an exam **once** per academic year at the end of the block/quartile during which the course was offered, with one 2<sup>nd</sup> chance to re-sit it, usually scheduled during the exam period of the following block/quartile. For exams in the last (4<sup>th</sup>) block/quartile of the academic year, the programme offers you a resit opportunity before the end of July.

Note: Passing grades are final and therefore a student cannot re-sit an exam once a passing grade has been obtained.

If a study unit has been completed successfully (final grade 6 or more) then this grade is final. If a student feels that there are exceptional circumstances that justify an exemption from this rule (and thus justify an extra exam opportunity), he/she has to send a motivated written request to the Examination Board. Such an exemption can only be granted once per student.

If you have been graded more than once for the same (part of an) exam, the highest grade applies.

### *Period of validity of examination results*

The validity of the examination results is five (5) years.

In case the final assessment of a course (unit of study) is composed of more than one element, the grades of these partial exam elements are valid until the end of the subsequent academic year, counting from the moment the exam element started.

Note: in case divergent conditions of validity apply in a course, then the involved teacher will publish these special conditions prior to the start of the course on the concerned Canvas environment.

The periods of validity also apply to assignments or papers.

In case the validity of your grades has expired, you may submit a motivated request at the Examination Board to extend the validity.

## 6.10 Student Charter and EER

Just like all higher education institutes, the University of Twente has its own Student Charter. This has its statutory basis in Art. 7.59 of the Higher Education and Research Act (WHW). The charter is law-making, which means that you can invoke the Student Charter in case of problems or conflicts. The Charter is kept up to date and is available online via the UT's website: <https://www.utwente.nl/en/ces/sacc/regulations/charter/>

The programme-specific part of the Student Charter (OSS), which includes the Education and Examination Regulations (EER), comprises a general section applicable to all Behavioural Sciences Master's programmes and a section with appendices drafted for each individual programme. The Education and Examination Regulations and Programme Specific Appendix (PSA) can be found on <https://www.utwente.nl/en/bms/education/regulations/>

## 6.11 Computer facilities

For every student, a notebook is indispensable nowadays. The University of Twente uses the so-called "**Bring your own device**" concept.

This means that you will use your own notebook/laptop to get access to the computer facilities of the university through a terminal server, by logging in using the wireless network Eduroam.

This *Bring your own device* concept does mean that you need to have a notebook/laptop during your studies at the University of Twente.

### **"What applies if..."**

- "I do not have a notebook": In this case, you will need to buy a notebook prior to your studies at the University of Twente. (A notebook using Windows is most easy to use with UT applications).  
Please, visit the website of the university Notebook Service Centre (<http://www.utwente.nl/lisa/nsc/>) for two very attractive notebook offers. Both notebooks are suitable for your study activities at the university.

- “I do have a notebook”. In case you already have a notebook, it is advised that the notebook is no older than 3 years and uses Windows 10.
- “I do have a MacBook or another type of notebook”: You can very well use a MacBook or another type of notebook but in some cases you may have to use special Windows software.

### **How to download computer programmes on your notebook?**

You can download various software programmes on your personal notebook via the Notebook Service Center with your UT ICT-account (<http://www.utwente.nl/lisa/nsc/>).

Various manuals are available through the site LISA: University Library, ICT Services & Archive (<http://www.utwente.nl/lisa/>)

## 6.12 UT Library

The UT Library is housed in building Vrijhof. Students can find a place to study here as well as borrow books and study materials.

For more information (e.g. opening hours and online access to the university's library, see their website: <https://www.utwente.nl/en/service-portal/university-library>)

## 7. Student support and counselling services

### 7.1 Study guidance

During your (pre-Master or Master) EST programme you can count on support and monitoring from the programme staff (study adviser and programme coordinator). The study adviser offers support with your individual plans for both your pre-Master's and/or Master's study trajectory. With the UT also offering additional student supervision and counselling, you can, if necessary, go to the Student Affairs Coaching and Counselling office (SACC) and get support from a student psychologist and/or student counsellor (see section 7.2 of this guide)

#### **Study adviser**

##### ***Yvonne Luyten–de Thouars***

As study adviser, Yvonne Luyten–de Thouars offers advice on study-related issues and she can inform you of practical matters concerning your study, such as examination regulations and legal status. You may consult her also on your personal problems. You may e.g. discuss with her your experiences, complaints, study choice, planning, delay, graduation support, exemptions, etc. If necessary, she can refer you to other support bodies in the university.

Contact:

Ravelijn, Room 3270

E-mail: [y.c.h.luyten-dethouars@utwente.nl](mailto:y.c.h.luyten-dethouars@utwente.nl)

Phone: (+31) (0)53 489 1117

#### **Programme coordinator**

##### ***Marlies Tijhuis***

As programme coordinator, Marlies Tijhuis is responsible for the organisational, procedural and intrinsic coordination and harmonisation of the pre-Master and Master-EST programmes. If you have a complaint or a question about the programme or certain subjects, the programme coordinator is the first person to see.

Contact:

Ravelijn, Room 3268

E-mail: [m.e.tijhuis@utwente.nl](mailto:m.e.tijhuis@utwente.nl)

Phone: (+31) (0)53 489 8604

**Educational Affairs staff member**  
**Huub Engbers**

Huub Engbers is the EST contact at the Educational Affairs Office. He is responsible for providing information to students and all administrative tasks related to the programme, such as questions about grades registration and course enrolment in Osiris, and questions concerning your graduation procedure.

Contact:

Huub Engbers (Mondays, Tuesdays, Thursdays, Fridays: 10:00-14:00h)  
Citadel H428

E-mail: [BOZ-EST@utwente.nl](mailto:BOZ-EST@utwente.nl)

Phone: (+31) (0)53 489 4122

**International student support officer**

Annemieke van der Grijspaarde

For International Students the Faculty of BMS has its own Office for International Affairs.

You may best contact Ms Annemieke van der Grijspaarde via:

[internationalstudentsupport-bms@utwente.nl](mailto:internationalstudentsupport-bms@utwente.nl)

Phone: 053 489 4633

Ravelijn, Room 3276

## 7.2 Additional UT student support

Various services have been organised for students and they have been combined to form the Centre for Educational Support (CES). The most important services are the following:

### **Student Services Desk**

The Student Services Desk provides all kind of services. You can go there for your student card, to register or to cancel UT enrolment, or to ask for a transcript of your records. You will find the Student Services Desk in the Vrijhof, room 239. See also: <https://www.utwente.nl/en/education/student-services/>

Opening hours: Monday - Friday from 10:00 – 12.00 and 13.00 - 16:00 hours.

You can contact Student Services as well via (+31) (0)53 489 2124 or

[StudentServices@utwente.nl](mailto:StudentServices@utwente.nl)

### **University's Student Affairs, Coaching & Counselling (SACC)**

The Student Affairs, Coaching & Counselling service is in charge of individual and collective care for and supervision of UT students at the co-ordinating level, supplementary to the

programme's obligations of supporting their own students in this area. Student Affairs, Coaching & Counselling Desk provides such services as the student counsellors, student psychologists, and various training courses (like: 'self-management', graduating, job interviews). For further information, go to: <http://www.utwente.nl/ces/sacc/en/>

#### *Student counsellors*

You may contact the student counsellors for questions on financial support (in case of study delay due to exceptional circumstances), changing your studies, admission exams, (general) complaints procedures, studying with a handicap, personal circumstances, etc.

#### *Student psychologists*

You can go to the student psychologist if you need to talk about a personal problem, such as an issue with your parents, friends or fellow students, or about anxieties or when you are feeling down or lost. You do not need a referral to see a student psychologist; you can make the appointment yourself. You can register for a first appointment with a student psychologist by filling out their online application form, after which you will be contacted through your student mail.

For appointments with student counsellor or psychologist:

Contact (+31) (0)53 489 2035 / E-mail: [sacc@utwente.nl](mailto:sacc@utwente.nl)

Office hours secretary SACC:

Monday-Thursday: 8:30 – 12:30 and 13:00 – 16:45

Friday: 8:30 – 12:30 and 13:00 – **15:45**

The UT student counsellors and psychologists are located in building 'Vrijhof' 3<sup>rd</sup> floor. Information desk Student Affairs, Coaching & Counselling, Vrijhof 3<sup>rd</sup> floor (room 311)

#### *SACC training courses*

Have a look on: <https://www.utwente.nl/ces/sacc/en/personal-development/> to see what courses are offered by SACC.

#### **UT Language Centre**

The UT Language Centre offers professional language support in English, Dutch or other languages to everyone at the University of Twente: students, PhDs, academic staff and support staff. Improving your English language skills will help you perform better in your work or study. Besides language courses the UT Language centre also offers courses or individual support on academic writing and study skills.

For the complete overview of their offering, see: <https://www.utwente.nl/en/ces/language-centre/>

## 8. Quality assurance

The Faculty of Behavioural, Management and Social Sciences (BMS) sets great store by the quality of its education. Students are generally appreciative of the study programmes offered by the faculty, yet critical of certain specific aspects. The programmes are very responsive to this and do their utmost to offer and improve quality.

Quality education requires the firm commitment of lecturers and students as well as proper communication. The core of the internal quality assurance system is formed by the course evaluations, and the annual systematic feedback from students. The quality cycle comprises the following internal quality assurance instruments.

### 8.1 Internal quality assurance

#### *Evaluation of the courses*

When students have completed a course, they are supposed to give their opinion on it by means of an anonymous survey or by means of a student panel feedback meeting. The lecturer will react on the results of this survey and integrate improvements in the next cycle of the course and curriculum. The contribution of the students is essential, which is why a lot of effort is put into gathering their feedback.

Both the section chair (to which the lecturer is accountable) and the programme director receive the results of the course evaluations and the lecturer's reaction and ideas for improvement, which can be discussed by the Programme Management Team and the Programme Committee and during the yearly SAQ-meeting with the Examination Board.

The results of the course evaluation and improvement actions for next year's cycle are published on the intranet website (therefore only accessible for UT students and staff): <https://www.utwente.nl/en/bms/intranet/evaluation/master/m-est/>. In addition, most lecturers publish their reaction and ideas for improvement on Canvas and address them at the start of the next cycle of the course.

#### *Student Satisfaction Surveys*

Upon graduation students receive an exit survey on the students' assessment of all kinds of education-related issues, such as the content of the curriculum, the quality of the lecturers, the quality of the teaching material, the communication between programme and student, the relationship with the labour market, the options available in the curriculum. In addition to this survey the EST programme participates in the evaluation cycle of the NSE (National Student Evaluation). These surveys are an important source of information to programme and faculty management. The results of these surveys are discussed in the Programme Committee and during the yearly SAQ-meeting with the Examination Board.

#### *Guaranteeing the quality of the lecturers*

The UT follows the rule that both novice and newly appointed lecturers must pass the *Basic Qualification in Education* within three years. For more experienced lecturers a *Senior Teaching Qualification* is offered, which challenges lecturers to develop even further. Furthermore, the

programme management always discusses the results of the course evaluations with the lecturer(s) concerned.

More information can be found on:

<https://www.utwente.nl/en/organization/structure/faculties/bms/education/quality-assurance-map/>

## 8.2 Consultative committees

### *Examination Board*

The Examination Board is responsible for all aspects of monitoring and assessing the instruction, e.g. the procedures during exams, the quality of the exams and the regulations with which both students and lecturers must comply. The Examination Board also assesses applications for personal adjustments of a study programme and assesses requests for exemption from or changes to exam components (exams, practicals etc.). The Examination Board consists of lecturers and an external member and is supported by a registrar. The members of the Examination Board are appointed by the Dean. Moreover, the study adviser and the programme coordinator advise the Examination Board. The Examination Board meets regularly (approx. 10 times per year).

If students have a request, they will need to submit this at least one week prior to the date of the meeting to [Examinationboard-bms@utwente.nl](mailto:Examinationboard-bms@utwente.nl)

More information on the Examination Board and its procedures can be found at their website: <https://www.utwente.nl/bms/examboard/>

### *Programme Committee*

EST has its own Programme Committee. The Programme Committee occupies itself with all issues directly related to the set-up and quality of the instruction, such as advising where necessary to make alterations either on course or on programme level. The programme director, the programme coordinator and the study adviser are involved as advisers. In accordance with the law, the Programme Committee consists of students and staff. On EST's Programme Committee there are four lecturers and four students. The members of the Programme Committee are appointed by the Dean. The Programme Committee advises the programme staff and the Dean, the latter particularly with regard to educational affairs that are addressed in the Faculty Council, such as the Education and Examination Regulations (EER). More information on the programme committee and its procedures can be found at their website: <https://www.utwente.nl/en/est/programme-committee/>

### *Employment Sector Committee*

The Employment Sector Committee advises the programme director on all educational matters, especially from the perspective of relevance for the job market, during an annual meeting with the EST programme's management staff.

For more information about the EST Employment Sector Committee see:

<https://www.utwente.nl/en/est/masterest/contact-staff-comm/employment-sector-committee-est/>

### 8.3 External quality instruments

#### *Educational review*

With its accreditation the NVAO (the Dutch-Flemish Accreditation Organisation) gives official approval to a programme that has stated that it has met all specified quality requirements. In connection with this, the NVAO reviews each programme in the Netherlands and Flanders once every six years. Both in the Netherlands and in Flanders, an accreditation is a condition for the government's funding/financing of a Bachelor's or Master's degree programme and for the entitlement to award recognised/validated diplomas. In the Netherlands it is also a prerequisite for issuing student grants and loans. The Master's degree programme EST has been re-accredited in spring 2023 and the conclusion was that the programme met all the criteria.

## **Part D: Course descriptions**

- D1: Master's degree courses (alphabetically ordered)
- D2: pre-Master's courses (alphabetically ordered)

D1: Master's degree courses (alphabetically ordered)

<b>4CID for Complex Learning</b>		<b>202200054</b>
<b>Teaching staff</b>	Dr. M.J.M. van Geel	
<b>Course description</b>	<p>You want learners to acquire knowledge, skills and attitudes that enable them to perform complex tasks they will encounter in all kinds of various, real-life settings.</p> <ul style="list-style-type: none"> <li>• Which constituent skills are required?</li> <li>• How to coordinate performance of those skills?</li> <li>• What kind of knowledge is required? When? What for?</li> <li>• Which procedural parts of the task are recurrent and can be practiced separately?</li> </ul> <p>Since designing blueprints for complex learning is a complex task in itself, this course was designed based on the 4CID principles. Tasks and assignments you will work on, will gradually increase in complexity. Support and guidance are provided where necessary, and lessened over time, and procedural information and part-task practice will be scheduled when you need it. Since you will acquire the knowledge and skills needed for these tasks, it is expected that all tasks feel equally complex and demanding.</p> <p>Relationship with technology: You will learn how various technological possibilities can be used to design tasks with high psychological, functional and physical fidelity. You will learn to make informed decisions on the use of e.g. computer simulations, AR, VR or other technology.</p>	
<b>Learning objectives</b>	<p>After this course you will be knowledgeable about and able to systematically apply the four-component instructional design model in developing a blueprint for complex learning, based on a thorough analysis of a complex task.</p> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Domain expertise, Design competency.</li> <li>• To a limited extent, this course contributes to: Research competency, Advice competency, Academic reflection.</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Advice competency, Academic reflection.</li> </ul>	
<b>Assessment</b>	individual open question exam (30%) and a group assignment (70%)	

<b>Designing Learning &amp; Performance Support</b>		<b>191970340</b>
<b>Teaching staff</b>	Dr. P.M. Papadopoulos	
<b>Course description</b>	<p>In this course, students engage in a design task, namely to create effective instructions that enable people to do things quickly. Examples of suitable design topics are instructions on using a software tool, operate a device, change a bicycle tire, etc. Students can select their own topic, medium (document, poster, video) and context for this task. Typically the design is multimodal (text, images, graphs, and/or video).</p> <p>Just as creating job-aids, students will develop instructions that afford people to self-regulate their actions. Students will be asked to adopt a systematic approach and report about the progress. A vital part of the <i>systematicity</i> comes from theories. The leading design theory will be <i>Minimalism</i>. Special attention will also be given to designing instructions that motivate people.</p> <p>During seminars, students will be introduced to the three main components of the course, namely: (a) theories &amp; design guidelines, (b) exercises, and (c) student progress reports.</p> <p>Students will be working in groups of 3-4 people to produce three mandatory deliverables:</p> <ul style="list-style-type: none"> <li>• Designed Instructions. The set of instructions designed for a client in an appropriate format (e.g., document, video, etc.).</li> <li>• Design Report. A document that describes the main design phases of the work done, the approach on theory and data, and analysis on the final product based on evaluation data.</li> <li>• Poster. A poster giving an overview of the project. The posters will be presented in the final session of the course.</li> </ul> <p>Relationship with technology: The course relies on the use of technology in two ways: (a) to support, manage, and monitor groupwork, and (b) to develop effective, efficient, and engaging instructional material.</p> <p>Regarding groupwork, the students will be assisted in using technology to perform effective project management. Specifically, each group will be working on a separate space on Canvas to set and record their own meetings, share files, organize deliverables, track feedback and product revisions, etc.</p> <p>Regarding the production of the instructional material, the students are free to use the medium of their choice. However, interactivity, engagement, and aesthetics are important. Based on the design needs of each group, the course can support students in creating graphs and visual, video/audio recording and editing, web design and usability analysis, and so on. Specifically for video products, interactivity is highly desired and the use of the H5P framework is strongly suggested (<a href="https://h5p.org/">https://h5p.org/</a>). H5P has a low technology barrier and can be easily mastered by novices. Nevertheless, some experience with the selected technology in general (e.g., video editing) is necessary as the course has a tight schedule and learning a completely new technology from scratch may be challenging.</p> <p>The design often involves a technical task. Most design solutions are interactive instructional videos and web pages.</p>	
<b>Learning objectives</b>	<p>At the end of the course the student is able to:</p> <ol style="list-style-type: none"> <li>1. design instructional material (tutorials, manuals, instructions, etc.) in a systematic fashion.</li> </ol>	

	<p>2. complete a design report that captures the main design phases, strategies and outcomes.</p> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Domain expertise, Design competency, Advice competency.</li> <li>• To a limited extent, this course contributes to: Research competency, Academic reflection.</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Advice competency.</li> </ul>
<b>Assessment</b>	<p>The final course grade will be based on the weighted grades of the three course deliverables:</p> <ul style="list-style-type: none"> <li>• Designed Instructions: 40%</li> <li>• Design Report: 40%</li> <li>• Poster session: 20% (this refers also in students' performance in presenting the work and answering questions about it)</li> </ul> <p>A passing grade is needed in all three deliverables to pass the course (e.g., getting a perfect score in the designed instructions and the report, but failing the poster means a final failing grade). Students will receive individual course grades and in cases of unbalanced collaboration between group members, this means that the grade of group members may differ..</p>

<b>Educational Measurement</b>		<b>201500149</b>
<b>Teaching staff</b>	Dr. E.C. Roelofs, Prof.dr.ir. B.P. Veldkamp	
<b>Course description</b>	<p>The course aims to develop hands-on skills in both construction and evaluation of assessments, that serve different user goals and on individual, group and system level. In order to create a firm theoretical basis for assessment construction and item-assessment analysis a collection of journal articles, book chapters and self-produced study texts are offered, related to the topics of workshops meetings.</p> <p>Throughout the course the perspective of Evidence-centred assessment design is used, which can be considered as state-of-the art both in assessment theory and practice. The key focus of this perspective is to arrive at valid inferences about (groups of) test-takers, that are informative for further actions is.</p> <p>Students will get to know the professional field of educational measurement including the contemporary major interest and innovations. During the course both known experts and practitioners in the field of Educational Measurement will provide (guest) workshops. For example from companies like the educational measurement institute Cito and Explain. For each of these topics, students are expected to study selected scientific papers. Students are expected to draw from the theoretical and practical insights gained through self-study and participation in the workshops when they carry out two intermediate assignments and a long-term item construction assignment.</p> <p>Students get support and feedback in small group meetings with the course teacher, scheduled by the student groups. Also, students are encouraged to give peer-feedback by serving as one another's pilot test-takers and</p>	

	colleague experts during the course and the final mini-symposium on their item construction.
<b>Learning objectives</b>	<p>After taking this course students</p> <ul style="list-style-type: none"> <li>- demonstrate ability in carrying carry out classical item-test analyses and in interpreting the meaning of difficulty parameters (value), discrimination (item-total correlation)</li> <li>- demonstrate ability in carrying out item-test analyses based on item-response theory, in interpreting the meaning of parameters, including item difficulty (beta), discrimination (a-parameter), item and test information parameters, using dedicated software</li> <li>- demonstrate ability in carrying out analyses on test data aimed at detecting sources of bias or lack of accessibility in items (such as DIF-analysis)</li> <li>- demonstrate ability in carrying out analyses using Shiny Item analysis and R-studio, under conditions of strong teacher support</li> <li>- demonstrate insight into the principles of systematic design of assessment of and for learning, which in turn aid valid decisions about the test-taker</li> <li>- demonstrate ability to design items in a subject domain, using the principles taken from the ECD sub models.</li> <li>- demonstrate ability to judge the accessibility and construct coverage of items in a subject domain, using scientific principles form literature and take consequential measures in item improvement</li> <li>- demonstrate insight in large-scale assessment methodology and analysis (such as PISA and PIRLS)</li> <li>- demonstrate insight in design of valid technology-enhanced assessments, including game-based assessment and simulations</li> <li>- demonstrate insight in the most important methods of standard setting, both classical methods for multiple-choice tests and methods for complex performance-based assessments, as applied on existing test data.</li> <li>- demonstrate ability to reflect critically on the quality of own constructed educational assessments and educational assessment of others, using the ECD-model and test accessibility principles as frames of reference.</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>- This course contributes (strongly) to: Domain expertise, Design competency, Academic reflection</li> <li>- To some extent, this course contributes to: Research competence</li> <li>- To a limited extent this course contributes to Advice competency,</li> </ul> <p>This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Research competency.</p>
<b>Assessment</b>	<p>Students carry out two short intermediate assignments directed at the application of psychometric methods used to determine item and assessment quality. Each of these assignments account for 15% of the final grade. In addition, students carry out a long term group assignment in which they construct a set of 20 original test items for the subject domain chosen in this course. As in practice they write a reflective report in which they provide an overview of the test content and a justification of construction decisions made in the perspective of evidence-centred design for the particular subject domain. This long term assignment accounts for 60% of the final grade. The presentation of the work done during the final meeting to peers accounts for 10% of the grade. Each of the assignments</p>

	mentioned needs to be completed at a sufficient level (minimum grade 5,5). The final grade for this course is based on the weighted mean of the four assignment grades.
--	---

<b>Global Talent Management</b>		201500086
<b>Teaching staff</b>	Dr. J.G. Meijerink	
<b>Course description</b>	<p>Did you know that mistakes in hiring one employee cost organisations about 200.000 EUR per year? Did you know that employers today receive an average of 101 to 150 applications for each job opening? And – did you know that only 26 to 50 percent of those applicants meet the minimum requirements for the positions to which they apply? This means that to avoid ineffective onboarding and to be successful, organisations need to develop, attract and retain real talent. The process of finding the needle in the haystack becomes more difficult, with more hay to search through, and too few needles. So how can organisations overcome these challenges to ensure they can more easily review candidates’ credentials and hire the best people?</p> <p>Interested in such challenges? The Global Talent Management (GTM) course will provide you with knowledge and skills to find your way in positioning yourself as a talent and learning how to manage global talent.</p> <p>During the course we will discuss questions like:</p> <ul style="list-style-type: none"> <li>• What is “talent” and who is a “talented” employee in MNCs?</li> <li>• How can MNCs best attract, develop and retain talent?</li> <li>• How do individual employees respond to (not) being classified as talent?</li> <li>• In what ways do countries (or regions) deal with talent management challenges such as labour market shortages?</li> <li>• What are cultural and institutional differences in talent (management) across the globe and in which ways do MNCs react to these differences?</li> <li>• What are the implications of sourcing talent through online labour platforms?</li> <li>• Are there limitations to managing talented people in MNCs? What are they if any?</li> </ul>	
<b>Learning objectives</b>	<p>This course develops students’ knowledge and skills in the multi-disciplinary field of inquiry as Global Talent Management and comparative HRM as well as skills for design-oriented research.</p> <p>Intended Learning Outcomes After completing this course master's students are expected to be able to:</p> <ul style="list-style-type: none"> <li>• Identify different definitions, views and perspectives on GTM;</li> <li>• Discuss GTM challenges for countries and for MNCs, and how these can be addressed;</li> <li>• Discuss the outcomes of global talent management for individual workers;</li> <li>• Explain the conceptual and empirical power of (neo)institutional and culturalist theoretical perspectives in GTM research and practice;</li> <li>• Develop a research proposal for a novel study into global talent management</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p>	

	<ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Research competency, Advice competency</li> <li>• To a limited extent, this course contributes to: Domain expertise, Design competency, Academic reflection</li> </ul> <p>This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Research competency, Advice competency, Academic reflection</p>
<b>Assessment</b>	Final Assignment 50% (individual assignment); weekly assignments 50% (group assignments). The average grade must be $\geq 5.5$ , and for both the final assignment and weekly assignments applies: at least a 5.5 must be obtained

<b>HRD &amp; Technology in a live context</b>		<b>201600126</b>
<b>Teaching staff</b>	Dr. B.J. Kollöffel, Dr. P.M. Papadopoulos	
<b>Course description</b>	<p>The aim is to produce an HRD advice report in a real-life context, based on a specific request from a client. The research and consultancy processes that you will apply require an integration of scientific theories and research approaches in a real-life context. This does not only require academic skills but also the competences to act in a business environment, negotiating on facilitating and inhibiting factors, and gaining support at the managerial, operational and individual levels, but also gaining experience yourself with the technology that you will be advising about.</p> <p>In this course students work in teams on real HRD cases from clients. These cases will focus on technology-enhanced learning from an HRD perspective, for example the use of technology (e.g., virtual reality; action cameras; eye-tracking; physiological measures) to study and foster the learning, training, and development of complex, job-related competencies, such as negotiating, public speaking, and handling of task-related stress.</p> <p>The aim is to provide the clients with an advice report. In this report, the latest and/or most relevant insights from scientific research and theories are presented. But it also provides an overview of best practices in other organizations or contexts, and reviews also information professional, non-scientific literature. All these insights will be presented in the advice report, along with critical discussion and practical recommendations.</p> <p>The course starts with an introduction to HRD, technology, consultancy and some HRD intervention skills necessary to complete the course. The teams will meet their client regularly and work in a group on a tailor-made final product and a justification and reflection report. This course offers a unique chance to apply theories and research methodology in HRD contexts and offers relevant preparation for the Final Project. Preparing the advice includes: analysis of the initial questions, reports on field research, design of interventions, supporting materials, instructions for practitioners, evaluation methodology, evidence of effects; furthermore reflections on the problem, context, design, research and consultancy approach, theoretical underpinning and effects, and the added value of HRD in this case.</p> <p>Relationship with technology: See course description.</p>	
<b>Learning objectives</b>	At the end of the course, students are able to:	

	<ul style="list-style-type: none"> <li>• work on the basis of a real-life problem about technology in an HRD context;</li> <li>• to apply academic and non-academic competences in the HRD real-life consultancy process;</li> <li>• to find and critically discuss the latest and/or most relevant scientific insights related to the given problem;</li> <li>• to find and critically discuss the latest and/or most relevant insights or best practices related to the given problem from non-academic sources;</li> <li>• to select, organize, and integrate the above mentioned information from scientific and non-scientific sources into a coherent, consistent, and meaningful report;</li> <li>• to present this final product;</li> <li>• critically reflect on one's own functioning as a member of an HRD consultancy team working on a real-life advice question.</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Research competency, Advice competency.</li> <li>• To a limited extent, this course contributes to: Domain expertise.</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Research competency, Advice competency.</li> </ul>
<b>Assessment</b>	<p>The course will be assessed and the grade will be determined on the basis of the quality of the advice report, a presentation, and an individual reflection assignment. The advice report counts for 75%, the project exam for 15%, and the individual reflection assignment counts for 10% of your final grade. This final grade needs to be at least "sufficient" (<math>\geq 5.5</math>) to pass this course.</p>

<b>HRM and Innovation</b>		201500087
<b>Teaching staff</b>	Dr. A.C. Bos-Nehles	
<b>Course description</b>	<p>Innovation is the cornerstone of many economies and societies. Furthermore, being innovative is crucial for businesses to gain a competitive advantage in the contemporary economy. Therefore, firms are all looking for the holy grail of innovation by searching for means to create new products and services before competitors even thought of it. Since employees are the ones who create new ideas and translate them into innovative products/services, both researchers and practitioners agree that employees are at the root of a firm's innovation success. As such, they are seeking for (new) human resource management initiatives that foster innovation at different levels in organisations. One example is Google's famous "20 percent projects" that allow employees to spend 20% of their time on projects of their own interests. This way, Google taps into the knowledge, skills, and abilities of its employees and facilitates the development of new ideas. Given the important role of employees in innovation processes, it is a necessity for HR and line managers to know how to stimulate innovative employee behaviours and how to manage people in organisations with the use of HRM practices.</p> <p>In this course, we invite students to engage in the quest to better understand how firms can make their workforces more innovative with the use of human resource management. As such, this course challenges you to think about questions such as: how does training lead to more and better innovative</p>	

	<p>ideas; what type of recruitment and selection practices do organisations need to attract innovative talent; or, how can employees be motivated to create new ideas? Asking these questions yet only contributes to improving the innovation performance of firms if one is capable of findings answers to them and turning those into practical recommendations. Therefore, besides providing knowledge on HRM and innovation interfaces, this course puts particular emphasis on helping students to improve their skills to analyse quantitative and qualitative data for answering research questions. Ultimately, this prepares them for the data analysis stage in their master thesis research and enables them to provide recommendations on how real-life firms can improve their innovation performance. In this course, we discuss the reciprocal relationships between human resource management, such as selection, training or development actions, and innovation. On the one hand, it focuses on how HRM and employee attributes affect different forms of innovation and on the other, how different organisational actors innovate HRM. In doing so, it challenges students to think about questions like which HRM practices make organisations ambidextrous, why does HRM affect performance (e.g. by building strong organizational climates, advancing knowledge resources or by developing strong social exchange relations with employees), does creativity require other HRM instruments than idea implementation, and in which way do employees gear changes in HRM practices? Ultimately, this trains students to empirically examine the relationship between HRM and innovation. In total, six topics will be discussed:</p> <ol style="list-style-type: none"> <li>1. HRM and innovative work behavior of employees</li> <li>2. The effect of individual versus bundles of HRM practices on innovation performance</li> <li>3. HRM and ambidexterity</li> <li>4. Line manager behavior and climate for innovation</li> <li>5. Innovator role adoption</li> <li>6. Conceptualizing, operationalizing, and measuring theoretical concepts in HRM – innovation research</li> </ol>
<p><b>Learning objectives</b></p>	<p>After completing this course master students are expected to be able to:          Critically reflect on the utility of social exchange theory, intellectual capital theory and climate theories to explain the relationship between human resource management and different forms of innovation;          Discuss the ways in which organizations can stimulate the innovative work behaviour of employees;          Discuss the ways in which organizations and employees innovate human resource management systems;          Examine, both qualitatively and quantitatively, the influence of human resource management systems on different forms of innovation;          Discuss the practical and theoretical implications of research results on HRM and innovation to provide recommendations for future research and practice.</p> <p>Students are also expected to continue training their skills to formulate rigorous and relevant research questions; interview business representatives; analyse quantitative and qualitative data for answering research questions; provide recommendations for future research and practice; and to work in project teams.</p> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p>

	<ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Research competency.</li> <li>• To a limited extent, this course contributes to: Design competency, Advice competency, Academic reflection.</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Research competency, Advice competency, Academic reflection.</li> </ul>
<b>Assessment</b>	Assignment. Minimum grade 5.5. The final score for this course is equal to the score of the assignment.

<b>HRM and Technology Design</b>		201500088
<b>Teaching staff</b>	Prof.dr. T. Bondarouk	
<b>Course description</b>	<p>We are certain – you know that ideally, organisations adopt HR Information Technologies (hereinafter – technologies) and HRM practices to power key HRM and business outcomes. You also know that when organisations make the business case for more a new IT for HRM, it is built on efficiencies and cost savings. As money and demand comes to HRM and technology, so do new ideas and smart people. The result — we see one of the most turbulent times ever in the field of HRM. Smart entrepreneurs can now build new tools with very little money, so the number of ground-breaking and often disruptive new ideas is growing... However, we question whether you know that HR technology adoption can not only lower costs (for example, moving to HR Shared Services or adopting an HR managers self-service), but it can also impact sales and other financial metrics through improving various HRM processes through automation, adopting business intelligence solutions, and even adopting social media tools when used strategically.</p> <p>Once “paper-based HRM practices,” the many of them are now online and they should be easy to do, right in the middle of work. We don’t even want to “log into the HR system”, we expect they must be so integrated that they can be done as part of daily HR routines. Gamification, datafication, sensing, crowdsourcing, network recruiting – this is the language of modern HRM professionals.</p> <p>So, how do we keep up and why should you care? The answer is simple – HRM and technology landscape is now more than a \$15 billion market in software alone (Bloomberg, 2014), and it is exploding with growth and innovation. Did you know that organisations that provide managers with direct access to technologies for making decisions about their workforce, significantly outperform those without by 10% higher revenue per employee, and 37% higher profit per employee (CedarCrestone, 2014)?</p> <p>While changing organisation type and the structure of the HRM function require the strategic support of the entire organisation, we think those involved in the adoption of HR technologies can achieve efficiencies and become more innovative in the organisation with their approach to HR technologies and thereby help achieve higher level business outcomes.</p> <p>Interested in such challenges? The course HRM and Technology Design will provide you with knowledge and skills to find your way in positioning yourself in the rapidly developing labour market and demands in integrative analytical skills in the field of HR and Technology. You will join this unique course and:</p> <ul style="list-style-type: none"> <li>• Benefit from the in-house rooted research expertise; and will be introduced to international leading scholars in the field of HRM &amp; IT as the Dutch research on HRM and IT (such as Electronic HRM, HR Shared Service Centres) was born in the University of Twente</li> </ul>	

	<ul style="list-style-type: none"> <li>• Enjoy the balanced workload with the parallel HRM course “HRM and Innovation” might you choose for the HRM profile of MSc BA</li> <li>• Value the latest developments in the field of HRM and Information Technologies, and their application to real life HRM practice</li> <li>• Learn to re-design the architecture of the HRM function in a real-life company</li> <li>• Train your skills to become a multidisciplinary project manager for the implementation of IT changes in organisations</li> <li>• Conduct small projects in cooperation with real life companies and exercising skills to design business solutions</li> <li>• Organising a symposium for companies and offer them business solutions.</li> <li>• Work in small teams – three persons per group – to ensure effective group work and learning</li> </ul> <p>Relationship with technology:</p> <ul style="list-style-type: none"> <li>• This course offers an overview of Information technologies that are available in the business market to support HRM and business decisions.</li> <li>• You will learn about different approaches to understand the role of technology in personnel management: from technology-as-an instrumental enabler, to technology-as-an active actor in HRM equations.</li> <li>• You will learn about different factors that affect e-HRM technology implementation, and the factors that affect success of e-HRM in organisations.</li> </ul>
<p><b>Learning objectives</b></p>	<p>The MSc course HRM and Technology Design (HTD) focuses on the design of HR and HRM function solutions based on a real-life business problem by applying and evaluating concepts of the HRM function, job design, e-HRM and HRIS implementation and organising a business symposium to share knowledge.</p> <p>After completing this course master students are expected to be able to:</p> <ul style="list-style-type: none"> <li>• Discuss the latest developments in the practical and academic fields of the HRM system, job design, HRM implementation and e-HRM; and their contexts.</li> <li>• Explain the latest developments and the conceptual and empirical power of Transaction Cost Analysis, Resource Based View and Theory of Planned Behaviour theoretical perspectives to critically reflect on the HRM function, HRM architecture and jobs design.</li> <li>• Analyse HR(M) architecture for specific external and internal environmental conditions.</li> <li>• Assess the effectiveness of the HRM architecture and function for business performance.</li> <li>• (Re-)design the HRM system in a real-life organisation, taken into account the external and internal contexts.</li> </ul> <p>Students are also expected to continue training their skills to define the problem in a real life company concerning the re-design of the HRM function within the seven topic of the course; evaluate alternative solutions to the re-design of the HR function; write an advice report to a company on the HRM function (re-)design; work in project teams and organise poster-based conference.</p> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p>

	<ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Advice competency, Academic reflection.</li> <li>• To a limited extent, this course contributes to: Design competency, Research competency.</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Design competency, Research competency, Advice competency, Academic reflection.</li> </ul>
<b>Assessment</b>	<p>An average of weekly group assignments (20%), Individual exam (close book, open questions) (40%), Final group report on the re-design including the poster presentation in the symposium (40%)</p> <p>The final grade needs to be at least "sufficient" (<math>\geq 5.5</math>) to pass this course.</p>

<b>Innovative and Technology-based Learning Environments</b>		201400002
<b>Teaching staff</b>	Dr. C. Dasgupta	
<b>Course description</b>	<p>Nowadays, technology plays a major role in educational practice. In this course, students will be introduced to how technology-based learning environments need to be designed in order to enhance learners' knowledge. Topics from the fields of psychology, educational sciences, and instructional technology will be discussed, including Mayer's cognitive theory of multimedia learning, cognitive load theory, inquiry learning with computer simulations and virtual or remote labs, video instruction, gamification, and computer-supported collaborative learning.</p> <p>This course applies a challenge-based approach to learning, which means that it starts with students identifying problems in a modern classroom, and then using known learning theories and technology as instruments to solve them. Students will use a design cycle to create their products.</p> <p>Relationship with technology: Lectures focus on theories and research relevant to the design of technology-based learning environments Students have to design a technology-based learning environment themselves</p> <p>Relationship with MPS Final Qualifications ([FQ's] as described in the MPS programme specific appendix of the EER): This course contributes (strongly) to: Disciplinary and specialist knowledge and skills at an advanced level, Design competencies at an advanced level To a limited extent, this course contributes to: Research competencies at an advanced level, Academic and professional skills and attitude aspects This courses assesses the following FQ's in some way (can include formal/informal, formative/summative, peer/expert): Disciplinary and specialist knowledge and skills at an advanced level, Research / Design competencies at an advanced level, Academic and professional skills and attitude aspects.</p> <p>Relationship with EST labour market (Intended Learning Outcomes [ILO's] as described in the EST programme specific appendix of the EER</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Domain expertise, Design competency</li> </ul>	

	<ul style="list-style-type: none"> <li>To a limited extent, this course contributes to: Research competency, Academic reflection</li> </ul> <p>This course assesses the following ILO's in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Research competency, Academic reflection.</p>
<b>Learning objectives</b>	<p>At the end of the course, the student has knowledge and insight in:</p> <ol style="list-style-type: none"> <li>main theories of learning that are relevant to innovative technology-based learning, such as engagement theory of learning, Mayer's cognitive theory of multimedia learning and cognitive load theory;</li> <li>theories and research into applications and elements of technology-based learning, such as computer simulations and virtual or remote labs, instructional videos, serious games and gamification, and computer-supported collaborative learning.</li> </ol> <p>Furthermore, at the end of this course, the student is able to:</p> <ol style="list-style-type: none"> <li>use scientific theories and empirical research to make deliberate design decisions for technology-based instructional elements, such as computer simulations and virtual or remote labs, instructional videos, serious games and gamification, and computer-supported collaborative learning.</li> <li>create a technology-based learning environment that aims at solving the problem(s) identified during needs analysis.</li> </ol>
<b>Assessment</b>	<p>To finish this course, students work in small teams of 4 members. Each team will perform a needs assessment, design and build an online lesson to address identified problems for primary, secondary, or higher education, and conduct a pilot study in which the lesson is evaluated. The teams have to write a report in which they discuss the rationales behind their design decisions from the perspective of theory and empirical research findings. Each member of the team individually provides feedback on the Inquiry Learning Space and corresponding report of another team. During the last lecture, all teams present their products to colleagues of the department who are invited to give their feedback and opinion on the products.</p>

<b>Leadership and Organisational Change</b>		<b>20120032</b>
<b>Teaching staff</b>	Dr. M.D. Post-Hubers	
<b>Course description</b>	<p>This course consists of five sessions. The course deals with different theoretical perspectives and research approaches in the fields of organizational change. Organizational change is (or can be) required, for example, to keep track of technological innovations, implement new policy/regulations (e.g., budget cuts, environmental demands), and to improve the functioning of the organization. Of course, attention will also be paid to the relation between leadership and professional development on the one hand and organizational change on the other hand. Examples of concepts that will be covered in this course are: meaning making, organizational routines, adaptive / technical challenges.</p> <p>Relationship with technology:</p>	

	<ul style="list-style-type: none"> <li>• It is attempted that at least one of the company visits takes place at a technical company</li> <li>• Students may choose to write their assignment about a leadership or change hype related to technology</li> </ul>
<b>Learning objectives</b>	<p>At the end of the course, students have knowledge about and insight into:</p> <ul style="list-style-type: none"> <li>- Theories and models about organizational change</li> <li>- Insight into the role that professional development and leadership play during organizational change</li> </ul> <p>At the end of the course, students are able:</p> <ul style="list-style-type: none"> <li>- to analyze cases and apply the appropriate theories/models about organizational change on these cases.</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>- This course contributes strongly to: Domain expertise, Research competence, Academic reflection</li> <li>- This course assesses the following ILO's in some way (can include formal/informal, formative/summative, peer/expert): Domain orientation, Research competence, Academic reflection.</li> </ul>
<b>Assessment</b>	A written assignment is used to assess whether the goals and objectives are met.

<b>Learning and Instruction</b>		202300197
<b>Teaching staff</b>	Dr. J. ter Vrugte, Dr. C. Dasgupta, Dr. A.M. van Dijk,	
<b>Course description</b>	<p>This course discusses the background, design and effectiveness of learning materials. Designs often depart from three main theoretical assumptions stating that learning is more effectively supported when:</p> <ol style="list-style-type: none"> <li>1. people use a dual channel (text and picture) approach</li> <li>2. short term memory limitations are considered</li> <li>3. active processing is encouraged</li> </ol> <p>These assumptions have led to a large set of instructional principles for the construction of learning materials. The course will discuss learning theories and design principles that are involved in different facets of learning.</p> <p>Relationship with technology: The lectures of Learning and Instruction cover the main principles of learning. Students are challenged to think critically about the design of instructional materials; how specific design principles trigger information processing in general, how human beings process and make sense of (new) information, and whether and how learning materials (e.g., learning environments, instructional videos) evoke meaningful learning. In this context, the use of technology to design and offer learning materials (i.e., multimedia learning) is thoroughly discussed.</p>	

	<p>Connection to the work field:</p> <p>In the course, students build a theoretical knowledge base on learning and instruction. This is done by focusing on theories that explain how people learn and combine this information with practical design guidelines concerning the development of learning materials and instruction,. This way, students are prepared for their future role in education; either as an educational designer or educational consultant. The skills and knowledge that are central in this course, will help students prepare for their future careers in the educational designer or educational consultant. The skills and knowledge that are central in this course, will help students prepare for their future careers in the educational context.</p>
<b>Learning objectives</b>	<p>At the end of the course, students should be able to:</p> <ul style="list-style-type: none"> <li>• apply theoretical foundations of learning and instruction;</li> <li>• apply, analyse and evaluate principles for reducing extraneous processing in learning;</li> <li>• apply, analyse and evaluate principles for managing essential processing in learning;</li> <li>• apply, evaluate, and analyse principles based on generative activity in multimedia learning</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Domain expertise, Design competency.</li> <li>• To a limited extent, this course contributes to: Research competency, Advice competency, Academic reflection.</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Advice competency</li> </ul>
<b>Assessment</b>	Course result is weighted average of unrounded results of Test 1-Exam and Test 2-Audit

<b>Regulation and Facilitation of Workplace Learning</b>		<b>201200031</b>
<b>Teaching staff</b>	Dr. S.M. Dennerlein	
<b>Course description</b>	<p>This course is focused on workplace learning: learning that takes place intertwined with the daily work process. Many paradigms and related theories exist that describe the process of workplace learning and how this can best be facilitated. This varies from learning theories that focus on experiential learning, learning in communities of practice, or learning theories that also take the organizational level into account. In this course we will discuss these theories, and their advantages and disadvantages when you would organize workplace learning accordingly. Not every theory will fit every context, every type of learner, and you will evaluate whether a theory fits your own perspective on learning. This course will prove how practical a good theory can be: you will experience how to facilitate learning in different contexts based on the underlying principles of a theory.</p>	

	<p>The course will start with some introductory lectures for which a flipped-the-classroom concept is used. You will study theories at home and in class we work on assignments to analyse the theories and apply these to a case. Halfway the course a take home exam is given. You will apply what you have learned in the second part when you interview an HRD manager about the corporate curriculum of their organisation: how is the learning regulated and facilitated in this organisation? The final assignment will consist of an analysis and evaluation of this corporate curriculum, resulting in an advice report on how to optimise this curriculum by making use of various theories.</p> <p>Relationship with technology:</p> <ul style="list-style-type: none"> <li>• We discuss several options of how technology can be used to facilitate workplace learning</li> <li>• You may interview an HRD-manager from a technological company</li> </ul>
<b>Learning objectives</b>	<p>At the end of the course, students are able to:</p> <p>Describe workplace learning theories and their benefits for different practices</p> <p>Explain relations between theories and ways to facilitate workplace learning (including technology)</p> <p>Discuss the advantages and disadvantages of ways of supporting workplace learning</p> <p>Analyse and evaluate a corporate curriculum in relation to theory</p> <p>Create alternatives for a corporate curriculum in relation to theory</p> <p>Write an advice report on how to optimize a corporate curriculum</p> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <p>This course contributes (strongly) to: Domain expertise, Research competency, Academic reflection</p> <p>To a limited extent, this course contributes to: Design competency, Advice competency</p> <p>This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Research competency, Advice competency, Academic reflection.</p>
<b>Assessment</b>	<p>The course assessment consists of two parts. The first part is an individual take home exam consisting of open answer questions. The second part is a group assignment (in small groups) for which you have to write an advice report based on an interview with an HRD manager. The exam counts for 40% and the assignment for 60% of your grade. The average of both exams needs to be at least "sufficient" (<math>\geq 5.5</math>) to pass this course.</p>

<b>Research Proposal</b>	<b>201200035</b>
<b>Teaching staff</b>	Dr. M.D. Post-Hubers, Dr. H. Van der Kolk, Dr. C.L. Poortman, Dr. H.H. Leemkuil
<b>Course description</b>	<p>The course "Research Proposal" is scheduled four times a year, during each quartile (1A, 1B, 2A and 2B), in order for students to take the course during the quartile when it best aligns with their EST Final Project. You follow the course Research Proposal after you have found a supervisor and agreed on a topic for your final project.</p> <p>Ideally, full-time students from the September enrolment take the course in block 1B and students from the February enrolment take it in block 2B, but in case they haven't found a topic by then, they can defer this course to the</p>

	<p>next quartile. In that case, do make sure you align this decision with the rest of the courses you're planning to take.</p> <p>Part-time students choose the moment that fits best in their study plan, and of course also after they have found a topic for their final project as well.</p> <p>A major aim of this course is to guide and scaffold students in preparing their Final Project. Students learn to write a plan for their Final Project (this plan is also called a research proposal). This research proposal forms the blueprint of the Final Project.</p> <p>Among other things, the following aspects will be addressed during this course:</p> <ul style="list-style-type: none"> <li>• Defining the purpose and the key concepts of the research, constructing and discussing a conceptual model, and formulating scientifically relevant research questions based on a review of the literature.</li> <li>• Choosing and justifying an adequate method of data gathering and data analysis based on the purpose of the research and the research questions through separate structured assignments.</li> <li>• Writing several sections of a research proposal (introduction, conceptual framework, method, etc.) through separate structured assignments.</li> <li>• Reviewing and evaluating the scientific quality of the several sections and the consistency of the research proposal written by fellow students.</li> </ul> <p>In other words: during mini-lectures and seminars those factors which determine the quality of the design of a research project and research proposal, such as: information skills, ethics, publication skills, will be dealt with. At the end of the course, students have knowledge on and insight into: how to formulate and design a research plan/project, and how to write a research proposal.</p> <p>Instructional modes:</p> <ul style="list-style-type: none"> <li>• Regular plenary sessions:</li> <li>• Mini lectures focused on the design and the writing of a research proposal (see content of the course). These mini lectures will also address other factors, such as information and publication skills, ethics, etc.</li> <li>• Workshops in which students provide and gain peer-feedback on their assignments. In addition, the students collaborate in small teams on their research plan and research proposal.</li> </ul> <p>Relationship with technology:</p> <ul style="list-style-type: none"> <li>• The nature and extent of the role of technology in this course is dependent on the topic and is therefore determined by the student together with the final project supervisor</li> </ul>
<b>Learning objectives</b>	<p>At the end of the course, students have generic knowledge on and insight into:</p> <ul style="list-style-type: none"> <li>• how to design a research plan/project</li> <li>• how to write a research proposal</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strong) to: Research Competency</li> </ul>

	<ul style="list-style-type: none"> <li>To a limited extent, this course contributes to: Domain expertise, Academic reflection</li> </ul> <p>This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Academic reflection.</p>
<b>Assessment</b>	<p>The writing of the research proposal will start at the beginning of the quartile (quartile 1A,1B, 2A or 2B). Separate structured assignments are in place to guide and scaffold this process. These assignments are conditional for passing the course. As a conclusion of the course, the student will submit his/her research proposal at the end of the quartile in which the course is followed. If a retake is needed, it must be submitted according to that quartile's schedule. The assessment of the research proposal (both the first attempt as well as the retake if needed) is done by the teacher of the quartile in which the student followed the course.</p> <p>In order to pass the course, the student has (a) to have fulfilled his/her duty to attend all sessions, (b) have actively participated in all sessions (it's up to the teacher to judge whether this condition is met sufficiently), and (c) the research proposal should be graded a 5.5 or higher. The grade for the research proposal is also the course grade. Students are considered to be participants of the course after handing in the first assignment.</p>

<b>Teacher Learning and Development</b>		<b>201200027</b>
<b>Teaching staff</b>	Dr. M.J.M. van Geel	
<b>Course description</b>	<p>The quality of teachers and teaching is crucial for student learning but varies both between and within schools. But what actually is 'good teaching'? In this course, we explore different kinds of knowledge and skills that are considered crucial for high quality teaching. We address different forms of professional development (PD), important conditions for teacher learning and change, and pay attention to the evaluation of the effectiveness of these interventions.</p> <p>At the end of this course, students know what to take into account when designing PD trajectories, what is known about the effectiveness of various approaches to PD, and what to consider when evaluating this effectiveness.</p> <p>Relationship with technology:</p> <ul style="list-style-type: none"> <li>Examples will be provided of supportive technology in professionalisation for teachers</li> <li>Examples of technology-supported evaluation will be shown and discussed</li> </ul>	
<b>Learning objectives</b>	<p>At the end of the course, students have knowledge of and insight into:</p> <ul style="list-style-type: none"> <li>Aspects of teacher's knowledge and skills which are relevant for quality teaching and sustainable educational reform</li> <li>Why teacher professional development is important</li> <li>Various forms for teacher professional development, including their pro's and con's</li> <li>How the teaching quality of teachers can be evaluated by means of a variety of instruments</li> </ul> <p>At the end of the course, students are able to:</p> <ul style="list-style-type: none"> <li>Explain how professional development characteristics will affect teacher quality</li> </ul>	

	<ul style="list-style-type: none"> <li>• Explain what school conditions need to be in place, to improve the effectiveness of the professional development process.</li> <li>• Evaluate the quality of a professional development trajectory with regard to guidelines for effective Professional Development (PD)</li> <li>• Design a teacher professional development trajectory based on all that was learned in the course</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Domain expertise, Design competency</li> <li>• To a limited extent, this course contributes to: Research competency, Advice competency, Academic reflection</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Research competency, Advice competency.</li> </ul>
<b>Assessment</b>	<p>The assessment in this course consists of two parts, that both need to be scored sufficient (<math>\geq 5.5</math>) to pass the course:</p> <ul style="list-style-type: none"> <li>• An individual take home exam in which you evaluate a PD trajectory (30% of your grade)</li> <li>• A group assignment in which you will develop a rationale, outline and evaluation plan for a PD trajectory (70% of your grade)</li> </ul>

<b>Team Learning at Work</b>		<b>201500010</b>
<b>Teaching staff</b>	Dr. A.M.G.M. Hoogeboom, N. Goossen	
<b>Course description</b>	<p>In the field of Professional Learning and Human Resource Development the study of team learning in the workplace is growing rapidly. In this course, you will acquire knowledge about which conditions facilitate team learning, how to enhance teamwork and collaboration, and how to maintain sustainable levels of performance in teams through continuous learning and improvement. A lot of attention has been devoted to learning at the individual and organizational level. However, HRD practitioners increasingly recognize that teams form the heart of professional learning in organizations today. Teams know more than the sum of their individuals. Yet, many teams are not designed and structured to enhance collective learning. Consequently, HRD practitioners and organizational advisors try to enhance team potential using continuous improvement and team learning practices. Learning teams can flexibly adapt to changes, can be more client-oriented, and can produce innovative and creative products. But how do teams become learning teams? After completion of this course, you will be able to effectively design, analyze and evaluate team learning and continuous improvement processes, using the tools, insights and practices that are offered in this course.</p> <p>The course will include pre-recorded lectures and interactive sessions covering the most important theories and models of team learning. Here we discuss topics such as “team learning processes,” “development of team learning,” and “team learning interventions.” In this course you will apply team learning theory to different professional contexts (i.e., healthcare, education, public sector, virtual, high-tech). Based on an area of your own interest, you will focus on how team learning works in a specific context.</p>	

	<p>Relationship with technology:</p> <ul style="list-style-type: none"> <li>• We discuss how technology can be used as an intervention (e.g., Synthetic Learning Environments) to stimulate team learning and continuous improvement</li> <li>• Students can select a high-tech HRD context in which they apply models and theories to optimise team learning</li> <li>• The course also includes guest lectures that will be provided by content experts and professional HRD practitioners; one of the guest lecturers will discuss how they use technology to optimise team learning</li> </ul>
<p><b>Learning objectives</b></p>	<p>At the end of the course, students have knowledge on and insight into:</p> <ul style="list-style-type: none"> <li>• The most important theories and models about team learning and their interconnectedness.</li> <li>• How the theories and models are helpful to understand, evaluate and optimise team learning at work.</li> <li>• How team learning processes work across different professional contexts (e.g., healthcare, education, public sector, high-tech).</li> </ul> <p>At the end of the course, students are able to:</p> <ul style="list-style-type: none"> <li>• Describe and compare models and theories about team learning.</li> <li>• Describe antecedents that foster or hinder team learning.</li> <li>• Describe outcomes of team learning that are relevant for HRD practices.</li> <li>• Apply team learning theories to different professional contexts.</li> <li>• Analyse and evaluate the quality of team learning processes in different professional contexts.</li> <li>• Generate an advice on how to optimise team learning within a specific professional context.</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• This course contributes (strongly) to: Domain expertise, Advice competency</li> <li>• To a limited extent, this course contributes to: Design competency, Research competency, Academic reflection</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Research competency, Advice competency.</li> </ul>
<p><b>Assessment</b></p>	<p>The course assessment consists of two parts.</p> <ul style="list-style-type: none"> <li>• The first part is an individual exam. This exam will be graded and is passed when your grade is 5.5 or higher (one 2nd chance will be provided).</li> <li>• In addition, the second part of the assessment will consist of a group paper. The aim of this assessment is to study the value of the applicability of the learned theories and models in a working context. Hence, the group paper serves to deepen the knowledge of these theories. When graded as “insufficient” there is one additional chance to re-write the paper.</li> </ul> <p>Both the individual exam and the group paper need to be at least “sufficient” (≥ 5.5) to pass this course.</p> <p>The final grade of the course will be the average of both subgrades.</p>

<b>Trending Topics in Educational Science and Technology</b>		<b>201200034</b>
<b>Teaching staff</b>	Dr. A.M. van Dijk, Dr. P.M. Papadopoulos (coordinators)	
<b>Course description</b>	<p>In this (obligatory for all EST students) core course, several instructors will present their field of expertise. The presented topics, therefore, will be aligned with the current and/or ongoing scientific research areas in our research groups.</p> <p>The presented topics will cover both the EDUcation as well as the Human Resource Development (HRD) domains.</p> <p>Organisation of the course: Each trending topic will be dealt with in a 3-weeks mode, in which the teacher is able to choose a format that fits the content of the topic best. In all topics, the teacher will provide relevant theory and background information on the topic, and a topic-related assignment.</p> <p>The nature of the assignments varies and the full set of to be attained competences (domain expertise, design, research, advice, and reflection) are addressed.</p> <p>Relationship with technology: The nature and extent of the role of technology in this course is dependent on the topics and is therefore determined by the teacher together with the coordinator.</p>	
<b>Learning objectives</b>	<p>At the end of the course, students have knowledge on and insight into:</p> <ul style="list-style-type: none"> <li>• Contemporary developments in the domain educational science and technology, both with regard to domain-specific topics as well as research methodological issues.</li> <li>• EDUcation- and HRD-specific aspects, research areas and research methodologies within the trending topics</li> </ul> <p>Relationship with EST labour market (Intended Learning Outcomes [ILOs] as described in the EST programme specific appendix of the EER):</p> <ul style="list-style-type: none"> <li>• Each topic to its own extent, the course contributes to: Domain expertise, Design competency, Research competency, Advice competency</li> <li>• This course assesses the following ILOs in some way (can include formal/informal, formative/summative, peer/expert): Domain expertise, Design competency, Research competency, Advice competency.</li> </ul>	
<b>Assessment</b>	<p>The final grade for this course is the average of the sub grades for the different topics. The final grade must be sufficient (grade <math>\geq 5.5</math>). Of the six assessments, one is allowed to be lower than 5.5 or a 'fail' (but still must be <math>\geq 5.0</math>) on the condition that the average of the sub grades is still <math>\geq 5.5</math> in total. If the condition is not met, the student is not allowed a retake in the same semester to improve a sub grade that was below 5.5. Instead, a retake is required in the next semester. If the topic that requires a retake is not available in the next semester (when the same topic is not offered again), the course coordinator will assign a substitute topic.</p> <p>Note: The grades of the different trending topics assessments in this course stay only valid until the end of the following semester in which the course is offered again. (Note: the Trending Topics course is offered twice per year). If a student does not pass the course (complete all trending topics' assessments) the 2nd time (so within one year), the student loses the grades</p>	

	previously earned for the topics which he/she have passed. Consequently, the student has to re-take the entire course.

D2: Pre-Master's courses (alphabetically ordered)

<b>Academic Writing Premaster</b>		<b>202100222</b>
<b>Teaching staff</b>	Dr. N. Dmoshinskaia, Dr. I. Friso-van den Bos	
<b>Course description</b>	<p>The course provides participants with the necessary skills for the preparation of academic articles/manuscripts in English. Participants will also be taught the techniques of effective information search, the ways to work with scientific articles and evaluate them, and the conventions used in literature citation and referencing. Participants will be expected to perform skill-building exercises during the different sessions. Writing tasks will also be given to provide participants the opportunity to practice and/or improve their writing skills. A total of 7 sessions are scheduled and each session will be a combination of workshops and short lectures. Attendance to all the sessions is obligatory. The primary basis for student assessment is a comprehensive literature review based on, at least, 10 scientific articles.</p>	
<b>Learning objectives</b>	<p>For the duration of the course, participants are expected to do the following:</p> <ul style="list-style-type: none"> <li>• search for relevant scientific articles that would be used for the writing of academic articles/manuscripts;</li> <li>• evaluate scientific articles using a set of criteria;</li> <li>• prepare a literature matrix to effectively work with different information from various sources (e.g. articles published in peer-reviewed journals, books, government reports, professional journals);</li> <li>• effectively use information from scientific articles for the writing of academic articles/manuscripts;</li> <li>• apply the conventions of source citation and referencing into their own academic articles/manuscripts; and</li> <li>• prepare a literature review using various academic, scientific, and professional sources.</li> </ul> <p>Moreover, after a successful completion of the course, participants are expected to be proficient in writing academic papers (e.g. literature reviews, conceptual papers, research proposals, theses).</p>	
<b>Assessment</b>	<p>Assignment. The assignment needs to be at least "sufficient" (≥ 5.5) to pass this course</p>	

<b>Designing for Learning in Schools and Organisations</b>		<b>202000264</b>
<b>Teaching staff</b>	Dr. J.W. Luyten (contact person), Dr. B.J. Kollöffel, Dr. S. van der Linden	
<b>Course description</b>	<p>The course consists of 2 components: Designing for learning in schools and designing for learning in organisations.</p> <p>Designing for learning in schools: Students in this unit will become familiar with core design concepts (e.g. design requirements, formative evaluation), design phases (preliminary study or analysis, design and evaluation) as well as key considerations for implementation during each phase. These goals are pursued through a number of sessions, which feature both theoretical and practical orientations during class and in the assignments. Specific topics to be addressed are teacher development and test design. This unit concludes with a written exam featuring both closed and open questions.</p>	

	<p>Designing for learning in organisations: The sessions on the domain of learning in organisations will be organised according to three themes: 1. Analysis, 2. Design, and 3. Evaluation. During each session, HRD theories will be discussed and applied to each theme. In addition, a case will be analyzed to practice with the application of HRD theories. This unit concludes with a written exam.</p>
<b>Learning objectives</b>	<p>There are 2 sets of goals and objectives:</p> <ol style="list-style-type: none"> <li>1. Designing for learning in schools: Upon successful completion of this unit, students will be able to: <ul style="list-style-type: none"> <li>• Identify and use techniques to design, develop, test and implement valid, practical and effective solutions to educational problems in the context of Education. This involves working in a systematic and creative manner, using scientific knowledge and practical skills in a comprehensive approach.</li> </ul> </li> <li>2. Designing for learning in organisations: Upon successful completion of this unit, students will be able to: <ul style="list-style-type: none"> <li>• Understand and apply different theoretical approaches in the domain of Human Resource Development (HRD).</li> <li>• Apply various strategies to increase learning and development in organisation.</li> <li>• Analyse and identify learning problems/challenges in organisations.</li> <li>• Find and apply relevant theories, models, and/or empirical research to drive the analysis and to inform the design of solutions.</li> <li>• Apply design approaches and methodologies for designing HRD interventions.</li> <li>• Apply basic consultancy skills, including effective, professional communication with the client.</li> </ul> </li> </ol>
<b>Assessment</b>	<p>The assessments of both the course's components are done by written exams.</p> <p>The final grade of the course is composed of the grades of the two course components. Both course elements will count toward 50% of the final grade. Both course's components have to be graded a 5.0 or more, with an average grade of at least 5.5.</p> <p>In case of insufficient partial grades, students may re-sit the one or both exam(s) that was/were not sufficient, in the following quartile.</p> <p>The grades of the course's components grades stay valid until the end of the following semester. If a student does not pass the course (i.e. complete all partial assessments satisfactory) until then, the student loses the grades already earned.</p>

<b>Inferential Statistics</b>		<b>202200378</b>
<b>Teaching staff</b>	Dr. H. van der Kolk	
<b>Course description</b>	<p>In this course the basic notions of data analysis that would allow them to make inferences about populations on the basis of a randomly sampled data set are introduced. The course uses the regression (or 'linear') model as the basic skeleton and in this context introduces confidence intervals and tests. In addition, it familiarizes students with the logic and implementation of some non-parametric statistical analyses (methods that do not use a concepts like 'the mean' and 'variance'). Usage of these</p>	

	methods is illustrated using research examples. The software used in both teaching and in the assessment is R for statistics.
<b>Learning objectives</b>	<p>At the end of the module, students will be able to, in general terms:</p> <ol style="list-style-type: none"> <li>I. correctly select from a set of the most important univariate, bivariate and multivariate inferential statistical methods to describe and test characteristics of variables and relationships between variables;</li> <li>II. carry out the most important univariate, bivariate and multivariate inferential statistical analyses using R for statistics;</li> <li>III. correctly interpret and report about output of these univariate, bivariate and multivariate inferential statistical analyses.</li> </ol> <p>More specifically students will be able to:</p> <ol style="list-style-type: none"> <li>1. explain the role and main assumptions of inferential statistics in the process of scientific research and its relationship with descriptive statistics, and know the main concepts used in the context of inferential statistics;</li> <li>2. construct confidence intervals and perform tests for both proportions and means;</li> <li>3. describe and statistically assess the relationship between one independent variable (dichotomous or nominal) and a dependent dichotomous or nominal variable;</li> <li>4. describe a relationship between one independent variable (dichotomous, nominal and scale) and a dependent scale variable using the linear model;</li> <li>5. construct confidence intervals and perform tests in the context of a bivariate relationship between one independent (dichotomous, nominal and scale) variable and a dependent scale variable using the linear model;</li> <li>6. describe a relationship between several independent variables and a dependent scale variable using the linear model (both in the context of addition and in the context of interaction);</li> <li>7. construct confidence intervals and perform tests in the context of several independent variables and a dependent scale variable using the linear model (both in the context of addition and in the context of interaction);</li> <li>8. assess whether the output of a parametric test should lead to adjusting the model (and the test) used and more generally assess whether the data allow using a parametric test to construct confidence intervals and perform tests in the context of a simple and multivariate relationships;</li> <li>9. construct a test for a mean, the difference between means and the association between scale variables when the assumptions for a parametric test are not fulfilled.</li> </ol>
<b>Assessment</b>	The assessment of this course consists of two parts test 1 and test 2. The tests both count for 50% of the final mark. The mark for a test must be at least 5.0. The final grade of the course should be at least a 5.5. For both tests a retake will be offered. Results for the tests are only valid for the current semester, unless you have explicit permission from both the study advisor and the teacher of this course to carry the grades to the next semester.

<b>Research Methodology and Descriptive Statistics</b>		<b>202001402</b>
<b>Teaching staff</b>	Dr. L.T.M. Rekers-Mombarg	
<b>Course description</b>	<p>This course introduces the basic principles of empirical research in the social sciences. The role of research in the context of the empirical cycle (i.e. testing theories) and research in the context of problem solving and design will be discussed. Students will learn to formulate clear and answerable empirical research questions. They will also learn to select from various correlational and experimental research designs and different data collection methods to answer these research questions. During the course, students will develop a first understanding of the concepts of validity and reliability and will comprehend factors that may undermine (measurement/internal/external) validity of research. Finally, they will get a basic understanding of descriptive and inferential data analysis.</p> <p>It is strongly recommended to make all assignments, use the discussion boards and attend the tutorials and Q&amp;A-lectures. It is not possible to follow only one part of this course. We expect students who register for this course actively participate in the course. Therefore, we will check whether the students' uploaded assignments are serious attempts.</p>	
<b>Learning objectives</b>	<p>After completion of this course students will be able to:</p> <ol style="list-style-type: none"> <li>1. formulate a clear empirical research questions, with clear units of analysis, variables and with a well-defined descriptive and/or explanatory aim;</li> <li>2. formulate of a well-phrased and testable causal hypothesis;</li> <li>3. identify and comprehend the implications of a causal statement (correlation, time order and the absence of a third variable);</li> <li>4. select an appropriate research design, and have knowledge of factors that may undermine validity associated with various designs;</li> <li>5. develop measurement instruments and assess their reliability and validity;</li> <li>6. sample data from a larger population, are aware of possible biases introduced in the selection process and understand the idea of statistical inference based on sampled data;</li> <li>7. describe data, using an appropriate statistical program, in frequency tables, bar charts, histograms and box plots;</li> <li>8. describe the relationship between variables, using bivariate tables and scatterplots;</li> <li>9. draw conclusions and report about the results of a basic data analysis.</li> </ol>	
<b>Assessment</b>	<p>For this course there are two partial exams (Test 1 and Test 2) and a R-test. The R-test is graded 'pass' or 'fail', and must be passed to complete the course. Both exams count for 50% of the final mark. The minimum mark for the partial exams must be at least 5.0 and the final mark must be at least 5.5 (so a 5.0 for one of the partial exams can be compensated via a 6.0 or higher for the other partial exam). There will be a retake offered for both partial tests and R-test. Results for a partial exam or R-test are only valid until the following semester.</p> <p>The lecturers can impose additional restrictions on the participations in the tests: only students showing sufficient participation in the course will be allowed to take part in the tests. This cannot be repaired after the course is finished.</p>	

<b>Research Studio</b>	<b>202300147</b>
<b>Teaching staff</b>	Dr. A.M. van Dijk, Dr. I. Friso-van den Bos
<b>Course description</b>	Educational scientists in the fields of EDUcation and Human Resource Development (HRD) investigate people's learning and professional development in school and non-school contexts. Practitioners, in turn, can use the insights that can be gleaned from educational research to improve their professional practices. So, regardless of whether you pursue an academic career or want to work in a more applied setting, you need to develop a solid understanding of educational research in the broadest sense of the word. This course is designed to do just that. Following the phases in the empirical cycle you will acquaint yourself with survey research and intervention studies as well as the qualitative and quantitative data produced therein. Through hands-on experience with real empirical materials such as scientific articles, case descriptions and existing datasets, you will learn to understand, conduct, report, and hopefully appreciate educational research
<b>Learning objectives</b>	By the end of this course, students should be able to: <ol style="list-style-type: none"> <li>1. Coherently, concisely and critically discuss concurrent literature about a set of key constructs.</li> <li>2. Formulate research questions and hypotheses that are well-grounded in literature.</li> <li>3. Accurately identify and operationalize key concepts.</li> <li>4. Propose a fitting research design to investigate a research question or test hypotheses in the fields of HRD and EDE.</li> <li>5. Design and apply suitable rubrics to code and score qualitative and quantitative data.</li> <li>6. Accurately propose and apply qualitative and quantitative methods to analyze the data.</li> <li>7. Draw valid conclusions from the data.</li> <li>8. Critically evaluate the contribution of a study to a body of existing knowledge, with clear argumentation.</li> <li>9. Report the research in a coherent scientific paper.</li> </ol>
<b>Assessment</b>	<p>The assessments are conducted through written assignments. All assignments must be submitted to receive a final mark.</p> <p>The final mark of the course is composed of the marks of the written assignments that together represent a full scientific article. Each of the assignments is weighted to compose the final mark.</p> <p>The weighted average mark of all the assignments needs to be at least 5.5 in order to pass the course.</p> <p>In case of insufficient partial marks and/or final mark, students may re-take a maximum of two assignments(s) that was/were not sufficient, within or shortly after this quartile.</p> <p>The marks of the separate assignments grades stay valid until the end of the following semester. If a student does not pass the course (i.e., obtain a sufficient final mark composed of the weighted assignment marks) until then, the student loses the grades already earned.</p>
