

SHAPE THE FUTURE OF LEARNING

MSc Educational Science & Technology

Learning in Education

Are you:

- Interested in how interactive learning environments can be designed to support learning?
- Intrigued by how learning can be assessed and how that can improve learning and teaching?
- Motivated to contribute to better education with the help of technology?

Then the focus area "Learning in Education" of the UT MSc "Educational Science & Technology" might be right for you!

In this MSc, you follow courses on lifelong learning, instruction, and assessment, plus you get coaching for your own professional development. The Learning in Education focus area expands your knowledge and skills with courses on:

- Design principles to support learning and performance
- Design models for complex learning
- Technology-based learning environments
- Teacher learning and development
- And more!

You can also opt for elective courses in the focus area "Learning & Development in Organisations" if you want to develop more in that direction. That's the great thing about this MSc programme: it gives you a variety of topics to select from, enabling you to become the learning professional you want to be.

UNIVERSITY OF TWENTE.

SHAPE THE FUTURE OF LEARNING

MSc Educational Science & Technology

Learning in Education

Your career prospects

After finishing the Learning in Education focus area, your career prospects look promising: you will have gained a solid basis to start as an educational designer, researcher, or advisor in educational organisation such as schools, universities, publishers, EdTech companies, and government, or you can opt to work self-employed.

Wat could you do?

Your tasks, for example, could include:

- Designing interactive learning environments and educational materials (e.g. e-learning, AI, augmented reality)
- Developing and evaluating assessments to measure learning
- Supporting the professional development of teachers

This list is far from exhaustive. Given the broad range of skills and insights taught in this MSc, and the flexibility in also partially setting up your own curriculum, you can develop into the learning professional you want to be!

Entry for UT students

If you would like to join this MSc programme with a UT bachelor's degree, please take a look at the transition matrix on the website (QR code below). Simplified entry requirements are available for students that do or have done an UT bachelor in Psychology, International Business Administration, Communication Science, Health Sciences, or Creative Technology. You only need to do the minor *"Psychology in Learning & Instruction"* or *"Professional Learning in Organisations"*, or do two of the pre-master's course to be able to enrol for the master EST *("Designing for learning in schools and organisations"* and *"Research Studio"*).

If you have specific questions about the Learning in Education focus area, please contact Yvonne Luyten-de Thouars (y.c.h.dethouars@utwente.nl).

We hope to welcome you to our programme!
