

INSPIRE-U

SUMMER CAMP

12-17 AUGUST 2018

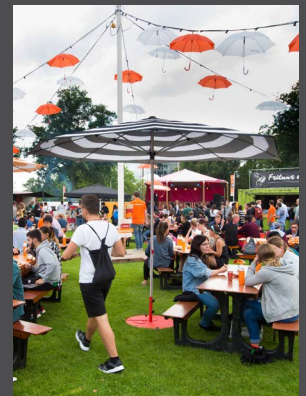

UNIVERSITY OF TWENTE.

LOOKING FOR AN **INSPIRING WAY** TO SPEND YOUR SUMMER 2018?
REGISTER FOR THE HIGH SCHOOL **SUMMER CAMP: INSPIRE-U** FROM 12-17
AUGUST!

INSPIRE-U SUMMER CAMP

InspireU combines a unique, 5-day summer camp at the campus of the University of Twente with a festival and thus provides you with a special experience: academic courses, music, sports, entertainment and inspirational speakers all in one place! Our summer camp is an English event for both international and Dutch high school students from the age of 15 – 18 years who are preparing for university.

During InspireU, you attend one of our four innovative courses, which are aimed at science, technology and development. The experiences and knowledge gathered during the courses will be combined at the final day and used in a creative brainstorm session: a Think Tank.

COURSES

BEAT OF THE BODY

Healthcare and technology is the theme of this course. You will have a look in an intensive care and will learn to practice the learned techniques, and you will do a medical research about wearables and medical applications for patients. You will present the outcomes of this research in a multidisciplinary consultation.

BUILD YOUR BUSINESS

In this course you will learn how to own your own business. You will have to negotiate, write a strategic marketing plan, gain profits, respond to changes on your business market and get an investment by giving a pitch for real investors. At the end of the course there will be an exciting final where the best entrepreneurs will be announced.

BATTLE OF THE ROBOTS

Robots play an increasingly important role in our lives. Robotics are used to solve important modern issues in for example healthcare and In this course you will learn how a robot 'thinks', how to program a robot and how to perform tasks by a robot. You will also program a robot by yourselves during the course!

BIGGEST NANO CHALLENGES

Nanotechnology is at the base of an enormous amount of diverse applications. Think about chips of your mobile phone, new energy-efficient solar panels or biomedical applications like lab-on-a-chip. In this course you will learn what nanotechnology implies, where the production and analysis are mainly important.
