Technology and the City II

The workshop will build on the insights and discussion of the panel "Technology and the City I."

Together with the scholars presenting at the panel and the co-editors of the upcoming book on "Technology and the city," we will invite the participants to further reflect with us on the interplay between cities and technologies. In small groups, you will be asked to identify future urban technologies which will shape and will be shaped by life in the city. Ideally, the exercise will lead us to the first outline of a future research agenda for the philosophical exploration of urban technologies.
