Call - Digital Security

H2020-SU-DS-2018-2019-2020

Cybersecurity and Digital Privacy

Trust and security are at the core of the Digital Single Market Strategy¹, while the fight against cybercrime is one of the three pillars of the European Agenda on Security².

The compliance of the European infrastructures, products and services with relevant directives (e.g. NIS³), regulations (e.g. eIDAS⁴, GDPR⁵, proposal for an e-Privacy regulation⁶) and standards (e.g. ISO27001, ISO27005) will promote trust and confidence to the European consumers and providers/suppliers, paving the way for a competitive, trustworthy Digital Single Market. Innovative solutions and services in digital security, privacy and personal data protection will open new market opportunities for the EU companies and will ensure a secure and trusted networked environment for the governments, businesses, individuals and smart things. Cybersecurity and privacy technologies will significantly contribute to strengthen the competitiveness of the EU industry and will enable its development as world leader in the global market.

The Communication on Strengthening Europe's Cyber Resilience System and Fostering a Competitive and Innovative Cybersecurity Industry⁷ shaped the main related challenges and several strategic initiatives to address them. Established in July 2016, the contractual Public Private Partnership (cPPP) on Cybersecurity aims at building trust among Member States and industry by fostering cooperation at early stages in the research and innovation process and helping to align demand and supply. It has been an important mean of consultation for defining research and innovation priorities for 2018-2020 and it will facilitate the engagement of end-users in sectors that are important beneficiaries and customers of cybersecurity solutions (e.g. energy, transport, health, finance) towards defining and providing to the industry their sector-specific digital security, privacy and personal data protection common

¹ Communication "A Digital Single Market Strategy for Europe" of 6.5.2015 - COM(2015) 192 final

² Communication "The European Agenda on Security" of 28.4.2015 – COM (2015) 185 final

³ Directive (EU) 2016/1148 of the European Parliament and of the Council of 6 July 2016 concerning measures for a high common level of security of network and information systems across the Union

⁴ Regulation (EU) No 910/2014 of the European Parliament and of the Council of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC

⁵ Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation)

⁶ Proposal for a Regulation of the European Parliament and of the Council - COM(2017) 10 final of 10.1.2017

⁷ COM(2016) 410 final, Brussels, 5.7.2016 COM(2016) 410 final

requirements. The topics below belonging to this Digital Security call will be part of the contribution of the Commission to the cybersecurity cPPP.

Mission: The aim is to make the society as a whole benefitting from user-friendly systems on cybersecurity, digital privacy and personal data protection, enabling an active participation of citizens and organisations to their own security, privacy and personal data protection.

Proposals are invited against the following topic(s):

SU-DS01-2018: Cybersecurity preparedness - cyber range, simulation and economics

Specific Challenge: The digital infrastructure, upon which other sectors, businesses and society at large critically depend, must be resilient and trustworthy, and must remain secure despite the escalating cyber-threats. New technologies and their novel combinations require innovative ways to implement security measures, as well as making new security-related assumptions, identifying "zero day" vulnerabilities or potential unknown vulnerabilities, forecasting new threats plus their cascading effects and emerging attacks, as well as managing cyber risks.

Many organisations are unable to forecast and/or estimate the impacts (e.g. economic, reputational, legal, social, business, societal) of a cyber-risk (e.g. data breach). This results often in insufficient or wrong investments to ensure a more cyber secure environment. In addition, cybersecurity experts and professionals need to continuously adapt their expertise to a constantly evolving landscape comprising of increasingly sophisticated and novel cyber-attacks, a widening surface of exposed ICT systems and services and a set of relevant changing legislation. In a connected EU society, there is an urgent need for highly valuable cybersecurity professionals in such a complex and fast evolving field, and security experts need to be in a constant learning process, to match the quick rate of evolution of the cyber threats, attacks and vulnerabilities.

In addition, cybersecurity skills need to be continuously advanced at all levels (e.g. security officers, operators, developers, integrators, administrators, end users) in order to enable cybersecurity, digital privacy and personal data protection within the EU Digital Single Market.

Scope: As a continuation of topic DS-07-2017 "Addressing advanced cyber security threats and threat actors", where cyber range is partially addressed, proposals are called to focus on extended capabilities of cyber ranges (e.g. piloting of networked cyber-ranges; extension of the cyber-ranges network, adding domain specificities like cyber range for IoT and/or for Industrial Control Systems such as SCADA).

The proposals should develop, test and validate highly customizable dynamic simulators serving as knowledge-based platforms accompanied with mechanisms for real time interactions and information sharing, feedback loops, developments and adjustments of exercises. These simulation platforms will help professionals responsible for cybersecurity in organizations to collaboratively improve their ability in handling and forecasting security

incidents, complex attacks and propagated vulnerabilities, based upon targeted scenarios and exercises. Proposals are encouraged to bring shared approaches to express and transform user needs into actual experiments and cyber exercises (e.g. capture-the flag) and to develop/integrate/parameterise appropriate tools and methods (e.g. modelling, gaming, dynamic decision making, extended dynamic vulnerability databases, attack ontologies/taxonomies) for supporting current and future generated evidence-based simulation scenarios. The proposed cyber-range model should be validated across one critical economic sector, involving as many as possible relevant stakeholders from its supply chain. Proposals should address the specific needs of end-users, private and public security end-users alike. Proposals are encouraged to include public security end-users and/or private end-users, and to create operational links to the CERTs / CSIRTs network across the EU.

Proposals should also develop, test and validate operational ways to continuously analyse the information collected by CERT and/or CSIRT centres and all relevant cybersecurity data (e.g. open, proprietary, Big data). This analysis should feed their risk analysis models (which need to comply with relevant standards e.g. ISO27001, ISO27005 and relevant EU cybersecurity legislation) in order to derive appropriate econometric models that can be used by public/private organisations/companies (e.g. insurance companies, SMEs, governmental bodies). These econometric models should assist them to select realistic, affordable baseline cybersecurity measures that will improve their security, resilience and sustainability, and should also help in identifying the cost and time to recover following a cyber-attack.

In addition, the econometric models should be helpful for: (a) identifying affordable security controls that are needed to protect valuable organization assets, (b) promoting the development of cyber insurance and liability policies/contracts and (c) fostering service level agreements addressing security, privacy and personal data protection requirements and policies. Proposals should bring innovative approaches to enforce and encourage accountability of security as a shared responsibility.

Proposals should also include (but should not limited to) the delivery of solutions for specific social aspects of digital security related to training, particularly practical, operational, hands-on training, including: (i) increase the dynamics of the training and awareness methods, to match/exceed the same rate of evolution of the cyber attackers; that is to say new methods of awareness/training offering more qualification tracks to fully and efficiently integrate ICT security workers and employers in the European e-Skills market; and (ii) integrate awareness into the eco-system of humans, competences, services and solutions which are able to rapidly adapt to the evolutions of cyber attackers or even surpass them.

Participation of SMEs is strongly encouraged.

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of between EUR 5 and 6 million would allow the specific challenge to be addressed appropriately.

Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Projects should also foresee activities and envisage resources for clustering with other projects funded under this topic and with other relevant projects in the field funded by H2020.

Expected Impact:

Short-term:

- Professionals better prepared to detect, block and mitigate emerging cyberattacks;
- End users of cybersecurity products and services more involved into expressing actual needs to developers/vendors, through cyber range and simulation;
- More organized collaboration between a network of cyber-ranges and Europe-wide initiatives such as the CERTs/CSIRTs cooperation network of the NIS directive.
- Improved risks analysis models to be used by public/private organisations, through the use of economics for evidence-based cybersecurity and data privacy;
- Appropriate econometric models able to learn from cyber incident data on a wide scale;
- Improved knowledge on how organisations can make the right investment to secure their operations against cyber-attacks (e.g. where they result in personal data breaches⁸), using economics for evidence-based cybersecurity and data privacy;

Medium and long term:

- Improved resilience of ICT systems/infrastructures and reduced time and cost in infrastructures for training users;
- EU countries better prepared to face malware campaigns and to take down malicious infrastructures; improved EU-skills market;
- Better preparedness to put in place cybersecurity measures and identify the necessary resources for recovering after a cyber-attack;
- Improved security, resilience and sustainability of organisations.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

⁸ Notification of a personal data breach to the supervisory authority and communication of a personal data breach to the data subject are regulated under articles 33 and 34 of the GDPR.

SU-DS02-2020: Management of cyber-attacks and other risks

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DS03-2019-2020: Digital Security and privacy for citizens and Small and Medium Enterprises and Micro Enterprises

Specific Challenge: Some members of the digital society in the EU are more vulnerable as they are less prepared to confront cyber-attacks. The scale, the value and the sensitivity of personal data in the cyberspace are significantly increasing and citizens are typically uncertain about who monitors, accesses and modifies their personal data. Personal data breach may facilitate abuse by third parties, including cyber-threats such as coercion, extortion and corruption.

In order to protect the freedom, security and privacy, and ensure personal data protection of the citizens in Europe, people should be enabled to assess the risk involved in their digital activities and configure their own security, privacy and personal data protection settings and controls across these services. The citizens need to be fully aware that their informed consent is necessary in many situations and become capable in providing their permission/consent and/or give scalable privileges for accessing their personal data/devices/terminals and for being monitored (e.g. via cookies).

Most Small and Medium-sized Enterprises and Micro Enterprises (SMEs&MEs) lack sufficient awareness and can only allocate limited resources -both technical and human- to counter cyber risks, hence they are an easier target (e.g. of ransomware attacks) compared with large organizations. Security professionals and experts working for SMEs&MEs need to be in a constant learning steep process since cybersecurity is a significantly complex and fast-evolving field. Taking into account the significant economic role of SMEs&MEs in the EU, tailored research to innovation should support cybersecurity for SMEs&MEs.

Scope: Proposals are invited against one of the following sub-topics:

Sub-topic 1: Protecting citizens' security, privacy and personal data protection

Proposals should bring innovative solutions to personal data protection, benefitting the security and privacy of the citizens, develop new applications and technologies in order to help citizens to better monitor and audit their security, privacy and personal data protection, enabling them to become more engaged and active in the fight against cyber, privacy and personal data protection risks.

These solutions should include innovative approaches, techniques and use-friendly tools for: (1) improving resilience against privacy and personal data protection risks (e.g. personal data

breaches⁹) and cyber threats (e.g. data misuse); (2) identifying, removing and reporting potential harmful content (e.g. apology of criminal acts, unhealthy or self-harming habits) and abusive interactions (e.g. harassment, unsolicited communications); (3) exercising citizens' right to erasure ("right-to-be-forgotten")¹⁰; (4) informing citizens about their privacy and personal data protection¹¹ level and empowering them to modulate it at any moment of their digital activities; (5) protecting or providing privileges for any access/audit/interference with citizens' "smart terminals" or their Internet-based communications (e.g. instant messages, voice over IP) in a data protection compliant way; (6) developing on-line help-desks services or "one-stop-shop" informing, helping citizens in dealing with any security and/or privacy incident and data protection breach, and enabling them in reporting any cyber or privacy related incident and data protection breach. Such approaches need to build bridges/synergies with data protection authorities and CERTs/CSIRTs. To better respond to the needs and expectations of the end-users, proposals should engage the end-users by involving them in the design and implementation, in order to ensure the usability and acceptability of the proposed solutions. In addition, assurance and transparency about the digital security, privacy and personal data protection levels embedded in products and services should be easily accessed, identified and monitored by all citizens, independently of their physical condition or ICT skills, by developing appropriate innovative solutions (e.g. cyber-labels, data protection certification mechanisms, privacy seals, digital stamps, dynamic indicators).

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of between EUR 4 and 5 million would allow this specific challenge under sub-topic 1 to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Sub-topic 2: Small and Medium-sized Enterprises and Micro Enterprises (SMEs&MEs): defenders of security, privacy and personal data protection

Proposers are encouraged to bring innovative approaches to increase the knowledge sharing in digital security across SMEs&MEs and between SMEs&MEs and larger providers. The user SMEs&MEs should be supported by democratizing access to tools and solutions of varied sophistication level, to allow SMEs&MEs to benefit from innovative targeted solutions addressing their specific needs and available resources, that are currently reserved to larger organisations (due to their cost and availability of internal expertise).

The proposals should develop targeted, user-friendly and cost-effective solutions enabling SMEs&MEs to: (a) dynamically monitor, forecast and assess their security, privacy and personal data protection risks¹²; (b) become more aware of vulnerabilities, attacks and risks

⁹ Notification of a personal data breach to the supervisory authority and communication of a personal data breach to the data subject are regulated respectively under articles 33 and 34 of the GDPR.

¹⁰ See article 17 of the GDPR.

¹¹ See article 12 of the GDPR.

¹² Data protection impact assessments are required in situations enumerated in article 35 of the GDPR.

that influence their business; (c) manage and forecast their security, privacy and personal data protection risks in an easy/affordable way; (d) build on-line collaboration between SMEs&MEs associations and with CERTs/CSIRTs, enabling thus individual SMEs&MEs to report any incident.

In addition, tools and processes should be proposed to facilitate the participation of user SMEs&MEs in cyber-ranges for cybersecurity (e.g. for creating joint experiments reflecting their daily digital activities and services).

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of between EUR 3 and 4 million would allow this specific challenge under sub-topic 2 to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Projects should also foresee activities and envisage resources for clustering with other projects funded under this topic and with other relevant projects in the field funded by H2020.

Expected Impact:

- Citizens and SMEs&MEs are protected and become active players in the Digital Single Market, including implementation of the NIS and the application of the General Data Protection Regulation.
- Security, privacy and personal data protection are strengthened as shared responsibility along all layers in the digital economy, including citizens and SMEs&MEs.
- Reduced economic damage caused by harmful cyber-attacks and privacy incidents and data protection breaches.
- Pave the way for a trustworthy EU digital environment benefitting all economic and social actors.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DS04-2018-2020: Cybersecurity in the Electrical Power and Energy System (EPES): an armour against cyber and privacy attacks

Specific Challenge: The Electrical Power and Energy System (EPES) is of key importance to the economy, as all other domains rely on the availability of electricity, hence a power outage can have direct impact on the availability of other services (e.g. transport, finance, communication, water supply) where backup power is not available or the power restoration time goes beyond the backup autonomy.

With the transition to a decentralised energy system, digital technologies are playing an increasingly important role in the EPES: they contribute reducing the energy consumption; they enable the integration of higher shares of renewables and promote a more energy efficient system. At the same time, with the growing use of digital devices and more advanced communications and interconnected systems, the EPES is increasingly exposed to external threats, such as worms, viruses, hackers and data privacy breaches.

Without appropriate cyber-defence measures, systems access could be violated with the malware spreading over the system and may cause power outages, damages and cascading effects to interconnected systems, and energy services. Therefore, with increased digitalisation, the EPES will face an increasing range of threats requiring an attentive evaluation of the cyber security risk that allows taking proper countermeasures. For example, the decentralisation process of the EPES will increase the number of access points (e.g. smart meters, IoT), hence increasing the exposure to cyberattacks. Also, even if security improvements may have been made since, older network protocols used in legacy SCADA/ICS (Supervisory Control and Data Acquisition System/Industrial Control Systems) were designed in times when cybersecurity was not part of the technical specifications for the system design.

On the other side, unlike IT systems, a control system in the EPES that is under attack cannot be easily disconnected from the network as this could potentially result in safety issues, brownouts or even blackouts. At the same time, with the decentralisation leading to a distributed energy system, the concept of microgrid/islanding is de facto acting and could be further exploited against cyber-attacks and cascading effects in the EPES.

In order to pursue the integration of the renewables within the existing EPES and to ensure that it benefits from the advantages brought by a modern digitalised electricity grid, there is a need for new security approaches detecting and preventing threats with severe impacts and to shield the electric system against cyber-attacks. Without an adequate strategy and measures to protect the energy system from cyber-attacks, the energy transition would be more risky, more costly and possibly in danger.

Scope: The proposals shall demonstrate how the actual EPES can be made resilient to growing and more sophisticated cyber and privacy attacks and data breaches taking into account the developments of the grid towards a decentralised architecture and involving all stakeholders. The proposals shall demonstrate the resilience of the EPES through the design and implementation of adequate measures able to make assets and systems less vulnerable, reducing its expositions to cyberattacks. Different scenarios of attacks with the relative counteracting measures have to be designed, described and tested on the field to verify effectiveness. Depending on the specific application, the proposal shall apply measures to new assets or to existing equipment where data flows were not designed to be cyber protected (e.g. SCADA, ICS). The proposals shall implement the following series of activities to make the electric system cyber secure: (i) defining cybersecurity design principles and standards with a set of common requirements to inherently secure EPES; (ii) assessing vulnerabilities and threats of the system in a collaborative manner (involving all stakeholders in the energy

provision supply chain); (iii) on that basis, designing a cyber-secure system architecture describing the advantages of the solution adopted compared to others and which guarantees the level of cybersecurity vital for EPES; (iv) implementing both organisational and technical measures in real life demonstration testing the cyber resilience of the system with simulation of different types of attacks and severity; and (v) demonstrating the effectiveness of the measures with a cost-benefit analysis.

The proposals shall also (i) develop security information and event management system collecting logs and other security-related documentation for analysis that can also be used for information sharing across operators of essential infrastructures and CERTs; (ii) formulate recommendations for standardisation and certification in cybersecurity at component, system and process level; and (iii) propose policy recommendations on EU exchange of information.

The dimension of a pilot/demonstrator within the proposal shall be at city level, involving generators, one primary substation, secondary substations and end users. The proposals shall include the following types of entities: TSO, DSO, electricity generators, utilities, equipment manufacturers, aggregators, energy retailers, and technology providers.

The proposals may refer to Industry 4.0 and other proposals and/or projects dealing with cybersecurity in energy.

Projects should also foresee activities and envisage resources for clustering with other projects funded under this topic and with other relevant projects in the field funded by H2020.

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of between EUR 6 and 8 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact:

- Built resilience against different levels of cyber and privacy risks and data breaches.
- Ensured continuity of the critical business energy operations.
- The energy sector is better enabled to easily implement the NIS directive.
- Increase the resilience of the electric system to different levels of attack.
- The cyber protection measures will be easily reconfigurable to new threats.
- A set of standards and rules for certification of cybersecurity components, systems and processes will be made available.
- Cyber protection policy design and uptake at all levels from management to operational personnel.

- Manufacturers are encouraged in providing accountability and transparency, enabling third parties monitoring and auditing the privacy, data protection and security of their energy devices and systems.

Drafting Comment: This topic is jointly funded by CNECT and ENER.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DS05-2018-2019: Digital security, privacy and accountability in critical sectors

Specific Challenge: In critical vertical sectors, cybersecurity technologies deployed in several application domains should be aligned to the specific domain needs, linking the demand side and the supply side for such cyber technologies. In the context of an increased digitization and also of growing complexity of cyber-attacks, there are certain sectors/subsectors identified as critical from the point of view of cybersecurity needs in the NIS Directive: energy (electricity, oil, gas), transport (air transport, rail transport, water transport, road transport), banking, financial market infrastructures, health sector (health care settings, including hospitals and private clinics), drinking water supply and distribution, and digital infrastructure. These sectors are important customers of cybersecurity solutions; hence it is of outmost importance to facilitate the engagement of end-users towards defining and providing sector-specific common requirements about digital security, privacy and personal data protection. Building security, privacy and personal data protection by design and by default, principles and standards should be clearly defined to protect the critical infrastructures in these sectors and ensure personal data integrity and confidentiality.

For transportation domain (aviation, maritime, terrestrial sectors involving smart vehicles such as aircrafts, ships, trains, busses, cars...), security must be managed pro-actively over the system as a whole. This must also extend to include interfaces to critical supporting infrastructures such as communication networks and satellite systems. The complexity of the transport sector finds its roots in the diversity of components that build the solutions in use and the very long lifecycle of these components. The challenge is to migrate these solutions, systems, and infrastructures to a higher level of cybersecurity.

ICT enables the healthcare sector to provide efficient, effective, cross-border top-quality healthcare services improving the public healthcare. Healthcare operations, services and applications are provided via various interconnected Infrastructures (e.g. hospitals, healthcare centres), systems (e.g. body scanners, patients' records management systems, patients' monitoring systems), entities (e.g. insurance companies, pharmaceutical companies, banks, manufacturers, suppliers) and people (patients, healthcare providers, employers). Personalized medicine is on the brink of becoming a successful approach to treat diseases. This increases the complexity of the pharmaceutical supply chain and rises the importance of a zero error rate for the supply of personalized medications. Cybersecurity in this respect is safety critical and novel approaches are needed to assure traceability and zero error deliveries. Moreover,

requirements related to data protection legislation should also be taken into account, as health is a very sensitive sector from this point of view¹³.

This interconnectivity reveals various threats, making the healthcare ecosystem vulnerable to catastrophic attacks with high impact to healthcare institutions and people's lives. The healthcare industry has seen a major rise in cyber-attacks over the past two years, and data breaches increasingly damage the healthcare industry as well as the privacy and personal data protection of the people. Vulnerable patients' records management systems can be attacked leading to unauthorised disclosure of, or access to, personal data concerning health (e.g. health records, prescriptions). Connected medical devices are increasingly used, in particular in wearables and home health monitoring devices transmitting data (e.g. embedded sensors measuring blood pressure, temperature heart rates glucose levels) over unsecure wireless networks from the patients' home to the hospitals exposing the privacy and personal data of the patients and resilience of the healthcare infrastructures.

Digital technologies are also profoundly changing the financial sector. Cybersecurity and trust solutions are essential to make FINTECH (digital technologies for finance) possible and for the stability of the financial sector that has to respond to increasingly sophisticated cyber-attacks.

Scope: For at least two of the critical sectors mentioned in the NIS Directive, proposals should treat generic aspects, by identifying common threats and attacks, and by developing proof of concepts for managing cybersecurity and privacy risks. Proposals should also treat specific aspects, by identifying specific vulnerabilities, propagation effects and counter measures, by developing and testing cyber innovation-based solutions and validating them in pilots/demonstrators, for one of the three critical sectors/domains mentioned as sub-topics, i.e. transport, healthcare and finance. During the conception and development steps, critical sectors/domains' specificities, such as complexity of infrastructure and their large scale, should be taken into account. These pilots/demonstrators will possibly use the transversal cyber infrastructures and capabilities developed in other R&I projects to demonstrate how the developed innovations can satisfy specific requirements in these key vertical sectors.

Proposals should also include (but should not be limited to) the delivery of specific social aspects of digital security related to training, particularly practical, operational, hands-on training, including: (i) increase the dynamics of the training and awareness methods, to match/exceed the same rate of evolution of the cyber attackers; that is to say new methods of awareness/training offering more qualification tracks to fully and efficiently integrate ICT security workers and employers in the European e-Skills market; and (ii) integrate awareness into the eco-system of humans, competences, services and solutions which are able to rapidly adapt to the evolutions of cyber attackers or even surpass them.

Participation of SMEs is strongly encouraged.

¹³ The GDPR in its Article 9 (processing of special categories of personal data) prohibits the processing of personal data concerning health unless one of the conditions set out in Article 9(2) apply.

Proposals are invited against the following sub-topics below, in 2018 and 2019

Sub-topic 1 [2019]: Digital security, privacy and personal data protection in multimodal transport

Proposals under this sub-topic should focus on at least one of the following items:

(a): Secure access management for citizens to all types of vehicles. A European Single Transportation market requires a pan-European, seamless privacy aware solution to access across mass, shared and individual mobility, which will bring added value to citizens while safeguarding data protection and privacy. However the corresponding increased interconnection of smarter systems increases the vulnerability surface and therefore novel tailored approaches should be proposed (e.g. related to cybersecurity by design in transportation systems).

(b): Assurance and protection against specific cyber-attacks in the multimodal transport domain, addressing interconnected threats and propagated vulnerabilities. Feasible solutions in practice should be delivered (e.g. holistic warning systems for complex interconnected transportation means), shielding the vulnerabilities that have severe impact and catastrophic propagation effects to the multimodal transport operations. Applicants should propose integrated, holistic approaches and tools for dynamically, automatically forecast and manage complex security and privacy incidents, and personal data breaches in the multimodal transport service and operation. Proposals should improve the security intelligence of treating complex multimodal transport security and privacy incidents, notably personal data breaches, vulnerabilities and attacks (e.g. enhance vulnerability repositories, enhance the means for identifying upcoming vulnerabilities). Proposals should develop practical means for relevant on-line sharing information and distributing real-time security, privacy and data protection warnings to all stakeholders in the multimodal transport ecosystem (collaboration with CERTs/CSIRTs is highly encouraged).

(c): Standardization to allow the quick adoption of cybersecurity best practices in the domain. Proposals might evaluate the feasibility of a security labelling for transportation.

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of about EUR 5 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Type of Action: Innovation action

Sub-topic 2 [2019]: Digital security, privacy and personal data protection in healthcare ecosystem

Proposals responding to this sub-topic should contribute towards the practical implementation of relevant EU legislation (e.g. NIS, eIDAS and GDPR) in the healthcare complex ecosystem involving all stakeholders (e.g. security officers, ICT administrators, operators, auditors, developers, manufactures, integrators, data protection officers) of all entities in the healthcare ecosystem (e.g. healthcare organizations/centres, associations, ministries, insurance companies, patients, providers, manufacturers) and considering all types of data handled, with special focus on sensitive data as defined by the GDPR (e.g. genetic, health, and biometric data).

Proposals under this sub-topic should tackle at least two of the following items:

(a): In collaboration with all stakeholders in the healthcare ecosystem and CERTs/CSIRTs, develop dynamic vulnerability data basis for collecting, uploading, maintaining, and disseminating vulnerabilities of ICT-based medical systems, technologies, applications and services (enhancing the ICT generic ones e.g. NIST, MITRE). Build dynamic taxonomies for medical-related attacks in order to become the basis for building healthcare cyber security incident management systems.

(b): Deliver dynamic, evidence based, sophisticated security, privacy and personal data protection risk assessment frameworks and tools that can deal with cascading effects of threats, and propagated vulnerabilities in interconnected healthcare infrastructures, entities, systems, supply chain services and applications (compliant with appropriate cybersecurity standards e.g. ISO27001, ISO27005, ISO28000).

(c): Provide collaborative privacy-aware tools enabling healthcare stakeholders to access and share information (where its integrity is guaranteed), advise and provide best/good practices about incident handling through appropriate interaction with healthcare participants respecting their privacy and personal data protection.

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of about EUR 5 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Type of Action: Research and Innovation action

Sub-topic 3 [2018]: Digital security, privacy and personal data protection in finance

Proposals under this sub-topic should tackle at least one of the following items:

(a): Resilience enhancing technologies. Proposers are expected to further develop innovative approaches (e.g. encryption, cloud computing or distributed ledger technology,..) tailored for the finance domain, ensuring that a proactive preparedness helps financial market participants and infrastructures to share information and better cope with technological shortfalls.

Proposals should explore tools for making the exfiltration of data for attackers unattractive, both for 'data at rest' and 'data in transit'; consider incipient trends (e.g. digital onboarding based on biometric data); and they should collaborate with CERTs/CSIRTs.

(b): New/enhanced/parameterized automated collaborative ICT tools for insurance companies, which are needed in order to collect security, privacy, personal data protection and accountability requirements from their clients and upgrade their insurance and liability policies respecting the EU legislation on cybersecurity, privacy and personal data protection, as well as cybersecurity standards (e.g. ISO27001, 27005).

(c): Standardization to allow the quick adoption of cybersecurity best practices in the domain. Applicants should propose novel approaches for promoting common standards for conducting stress and resilience testing across systemic financial market infrastructures and institutions or for certifying companies/organizations that can perform accredited conformity tests.

The outcome of the proposal is expected to lead to development up to Technology Readiness level (TRL) 7; please see Annex G of the General Annexes.

The Commission considers that proposals requesting a contribution from the EU of between EUR 3 and 4 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Type of Action: Innovation action

Projects should also foresee activities and envisage resources for clustering with other projects funded under this topic and with other relevant projects in the field funded by H2020.

Expected Impact:

Short term:

- The technological and operational enablers of co-operation in Response and Recovery will contribute to the development of the CSIRT Network across the EU, which is one of the key targets of the NIS Directive.
- Identified relevant generic and specific aspects related to cybersecurity and digital privacy in critical domains/sectors.
- Advanced holistic systems and innovative proof concepts for managing cybersecurity and privacy risks in critical domains/sectors.
- Advances in the state-of-the-art analysis of specific aspects of critical domains/sectors, such as related cyber threats, attacks and vulnerabilities;
- Sound analysis of cascading effects of specific related cyber threats within the supply chain of critical domains/sectors;

*Horizon 2020 -
Secure societies - Protecting freedom and security of Europe and its citizens*

- Improved cybersecurity information sharing and collaboration among critical domains/sectors stakeholders and with CERTs/CSIRTs;
- More targeted and acceptable security management solutions addressing specificities of critical domains/sectors.
- Trigger the fast adoption of cybersecurity/privacy/personal data protection best practices in the critical domains/sectors.

Medium term:

- Better response and recovery technologies and services that will help organizations in the critical domains/sectors to significantly reduce the impact of propagated and cascaded threats, vulnerabilities and breaches.
- Enhanced protection against emerging novel advanced threats in critical domains.
- Improved security governance of the critical domains/sectors.
- Greater and more mature EU cybersecurity market in the critical domains/sectors.
- Reduce the impact of breaches with various levels of success in penetrating the defences.

Long term:

- Better cybersecurity for specific standards in the critical domains/sectors that will trigger fast adoption of best practices in the related industry.
- Established trust chains among all entities in the critical domains/sectors eco-systems;
- Better implementation of the relevant EU legislation (e.g. NIS, eIDAS, GDPR) in the critical domains/sectors.
- Activate companies in the field of the critical domains/sectors to become the "evangelists" for promoting cyber security, privacy and personal data protection in the whole EU specific ecosystem.

Type of Action: Innovation action, Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

Conditions for the Call - Digital Security

Opening date(s), deadline(s), indicative budget(s):

Topics (Type of Action)	Budgets (EUR million)			Deadlines
	2018	2019	2020	

*Horizon 2020 -
Secure societies - Protecting freedom and security of Europe and its citizens*

Opening: 15 Mar 2018				
SU-DS01-2018 (IA)	16.00			23 Aug 2018
SU-DS04-2018-2020 (IA)	20.00 ¹⁴			
SU-DS05-2018-2019 (IA)	8.50			
Opening: 15 Mar 2019				
SU-DS03-2019-2020 (IA)		18.00		22 Aug 2019
SU-DS05-2018-2019 (IA)		10.00		
SU-DS05-2018-2019 (RIA)		10.00		
Opening: 15 Mar 2020				
SU-DS02-2020 (IA)			38.00	27 Aug 2020
SU-DS03-2019-2020 (IA)			10.80	
SU-DS04-2018-2020 (IA)			20.00 ¹⁵	
Overall indicative budget	44.50	38.00	68.80	

Indicative timetable for evaluation and grant agreement signature:

For single stage procedure:

- Information on the outcome of the evaluation: Maximum 5 months from the final date for submission; and
- Indicative date for the signing of grant agreements: Maximum 8 months from the final date for submission.

Eligibility and admissibility conditions: The conditions are described in General Annexes B and C of the work programme.

Evaluation criteria, scoring and threshold: The criteria, scoring and threshold are described in General Annex H of the work programme.

Evaluation Procedure: The procedure for setting a priority order for proposals with the same score is given in General Annex H of the work programme.

The full evaluation procedure is described in the relevant [guide](#) published on the Participant Portal.

¹⁴ of which EUR 5.00 million from the 'Secure, clean and efficient energy' WP part.

¹⁵ of which EUR 15.00 million from the 'Secure, clean and efficient energy' WP part.

Consortium agreement:

	Members of consortium are required to conclude a consortium agreement prior to the signature of the grant agreement.
--	--

DRAFT

Other actions

1. Reviews of projects

This action will support the use of appointed independent experts for the monitoring of running projects, where appropriate, through Expert Contracts

Type of Action: Expert Contracts

Indicative timetable:

Indicative budget: EUR 0.89 million from the 2018 budget(Review of projects) and EUR 0.74 million from the 2019 budget(Review of projects) and EUR 0.62 million from the 2020 budget(Review of projects)

2. Workshops, conferences, experts, communication activities, studies

- Organisation of an annual Security Research event.
- Support to workshops, communications activities, or studies. Workshops are planned to be organised on various topics to involve end users; preparation of information and communication materials, etc.
- Experts assisting with the design and implementation of the actions, and to fine-tune the 2020 work programme. A special allowance of EUR 450/day will be paid to the expert appointed in their personal capacity who acts independently and in the public interest.
- Support to cybersecurity events; socio-economic studies, impact analysis studies and studies to support the monitoring, evaluation and strategy definition for cybersecurity and digital privacy policy.

Type of Action: Public Procurement - null

Indicative timetable:

Indicative budget: EUR 2.50 million from the 2018 budget(Workshops, etc.) and EUR 2.50 million from the 2019 budget(Workshops, etc.) and EUR 2.50 million from the 2020 budget(Workshops, etc.)

3. Space Surveillance and Tracking

Support to security aspects of Space Surveillance and Tracking.

Type of Action: Specific Grant Agreement

Indicative timetable:

Indicative budget: EUR 1.50 million from the 2018 budget(Space Surveillance and Tracking) and EUR 1.00 million from the 2019 budget(Space Surveillance and Tracking) and EUR 0.50 million from the 2020 budget(Space Surveillance and Tracking)

4. Pre-standardisation mechanisms for security

Support to a consortium comprising CEN (coordinator) and CENELEC in cooperation with ETSI, as well as the JRC as the current ERNCIP coordinator, to address how to achieve timely standardization in the field of security, including through structural changes.

Pre-standardisation and standardisation processes as currently in place in the fields of security and civil protection are not considered satisfactory, whilst many of their components are very valuable: the JRC produces interesting pre-standards in cooperation with a broader research community; CEN/CENELEC and ETSI produce solid standards with the very active involvement of industry. However: both sets of activities are not very agile; and they do not interface optimally.

These organizations are invited to propose mechanisms and novel ways of working and organizing themselves, towards the establishment of standardisation processes in the field of security that build upon the strength of the various processes in place, and increase their effectiveness, speed and efficiency.

Legal entities:

Coordinator: European Committee for Standardization (CEN) - Brussels (Belgium)

European Committee for Electrotechnical Standardization (CENELEC) - Brussels (Belgium)

European Telecommunications Standards Institute (ETSI).- Valbonne (France)

Joint Research Centre - Ispra (Italy)

This grant will be awarded without call for proposals in line with Article 190(1)(e) of the Rules of applications of Regulation (EU, Euratom) 966/2012, Regulation No 1268/2012 and Article 11(2) of the Rules for participation and dissemination in "Horizon 2020 - the Framework Programme for Research and Innovation (2014-2020)", Regulation (EU) No 1290/2013.

Type of Action: Grants to identified beneficiaries

Indicative timetable:

Indicative budget: EUR 0.90 million from the 2018 budget(Pre-standardisation mechanisms)

CALLS and OTHER ACTIONS for 2020

[...]

Call - Digital Security

H2020-SU-DS-2018-2019-2020

footnote: This is the continuation of of a call for which information is provided in the first section of this work programme part.

Topics

- Management of cyber-attacks and other risks
- Digital Security and privacy for citizens and Small and Medium Enterprises and Micro Enterprises [continued]
- Cybersecurity in the Electrical Power and Energy Systems (EPES): an armour against cyber and privacy attacks [continued]

Introduction

Meaning of the “Impact” section:

The better the specific impacts mentioned can be delivered from a project, the higher the mark of the proposal in respect to the “Impact” criteria.

Meaning of the mandatory participation of specific entities:

When a topic has eligibility and admissibility conditions which state: "mandatory participation of" specific entities (e.g.: '3 Law Enforcement Agencies (LEA) from 3 different MS or AC) means that these entities have to be participants and should be directly involved in the carrying out of the tasks foreseen in the grant. See also "Meaning of practitioners".

Meaning of practitioners

A practitioner is someone who is qualified or registered to practice a particular occupation, profession in the field of security or civil protection. Applicants should identify clearly which members of the consortium they consider "practitioners" in the specific context of their proposal, and to include a clear description of their respective role and added-value as practitioners in section 4.3 of proposal part B4-6.

Meaning of synergies with EDA-funded activities

Whereas activities will have an exclusive focus on civil applications, coordination with the activities of the European Defence Agency (EDA) may be considered with possible synergies being established with projects funded by the EDA programmes. The complementarity of such synergies should be described comprehensively. On-going cooperation should be taken into account. Only an explicit and firm commitment from EDA-funded projects to contribute to a project may positively impact the evaluation of a proposal submitted under this work programme part.

Meaning of "Possible classification":

All topics will be subject to security scrutiny.

Open access to research data

Please note that grant beneficiaries under Horizon 2020 will engage in research data sharing by default, as stipulated in Article 29.3 of the Horizon 2020 Model Grant Agreement (including the creation of Data Management Plan). However, keeping in mind that all proposals will be subject to Security Scrutiny, the attention of the grant beneficiaries of this work programme part is drawn to the fact that they may find more appropriate to opt out of these arrangements. More information can be found under General Annex L of the work programme.

Meaning of "Societal aspects":

Security as societal value is a guiding principle throughout this Work Programme. All individual actions must be in compliance with the provisions of the Charter of Fundamental Rights of the European Union.¹

The applicants must fill in the "Societal Impact Table", as part of the submission process. This table is taken into account during the evaluations under the "Impact" criteria.

When dealing with the development of technologies, it is recommended that actions consider the concepts of "privacy by design", "data protection by design", "privacy by default", and "data protection by default".

Meaning of Responsible Research and Innovation²

The calls under 'Secure societies – Protecting freedom and security of Europe and its citizens' are in line with the Horizon 2020 Responsible Research and Innovation (RRI) cross-cutting issue, engaging society on sensitive security issues, integrating the gender and ethical dimensions, ensuring the access to security research outcomes whenever possible and encouraging formal and informal science education relating to security. Activities will be multi-actor and underpinned by public engagement.

Horizon 2020 Interim Evaluation

This work programme part takes account of the results of the Interim Evaluation of Horizon 2020. The approach taken in the 2016-2017 work programme of requiring a minimum number of practitioners in a consortium is continued. This not only ensures that the research projects are attuned to the requirements of practitioners, but also reduces oversubscription. The involvement of SMEs is promoted including by introducing a topic requiring the coordinator to be an SME. Furthermore, the need to bring newly-developed technologies closer to the market is promoted through the application of Pre-Commercial Procurements. It should be noted that security research is challenge-driven; its main purpose is to develop new technologies and working methods that will help practitioners responding to emerging security threats. Therefore, in order to meet practitioners' needs, TRL levels will inevitably remain relatively high.

Contribution to FA 'Boosting the effectiveness of the Security Union' (SU): EUR 657.95 million.

¹ <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:C:2010:083:0389:0403:en:PDF>

² http://ec.europa.eu/research/swafs/pdf/rome_declaration_RRI_final_21_November.pdf

Boosting the effectiveness of the Security Union - Focus Area

Working to ensure a high level of security for Europeans is an objective set by the Treaties, and a common European responsibility. The importance of the Security Union agenda has been highlighted in the Commission Communication of 20 April 2016³ and by the subsequent appointment of a Commissioner for the Security Union. The majority of Member States depend entirely on Horizon 2020 to cover their needs for innovative security solutions, and it represents 50% of the overall public funding for security research in the EU.

At the core of research in this area is the development of new products to meet the needs of security practitioners. Research is not just about developing new technologies or applying emerging technologies, but also requires understating phenomena such as violent radicalisation and the development of more effective policies and interventions. This means social sciences and the humanities will be involved.

To help end results correspond to real needs, research will generally require the involvement of security practitioners and those working with at-risk groups, for example fire and rescue services, police forces, border and coast guards, municipalities, social workers, educators and civil society actors. One challenge is segmentation of civil security industry largely into national markets. Progressive development of a single market also in this area can be expected to bring benefits of economies of scale, providing incentives to businesses to develop new solutions and lowering costs for purchasers. To facilitate supply and demand for new goods and services, innovative procurement (PCP, PPI) will be used.

Mission

The mission for this Focus Area is to support implementation of the Security Union priorities. Specific issues to be covered are: reacting to and recovering from natural and man-made disasters; preventing, investigating and prosecuting crime including organised crime and terrorism; improving border entry security; protecting infrastructure against natural and man-made threats, including cyber-attacks; digital security and privacy; and space-related research.

- Reduced loss of life and reduced environmental, material and economic losses from natural and man-made disasters.
- Key infrastructure better protected against natural and man-made threats, including cyber-attacks.
- New products that meet the needs of security practitioners in the EU, including for investigating and prosecuting crime (including cybercrime) and terrorism.
- EU borders better secured against the entry of undesirable persons or goods.

³ *Delivering on the European Agenda on Security to fight against terrorism and pave the way towards an effective and genuine Security Union*, COM(2016) 230 final, 20.4.2016.

*Horizon 2020 -
Secure societies - Protecting freedom and security of Europe and its citizens*

- Ensuring a secure and trusted networked environment for the governments, businesses and individuals, thus positioning the EU as a world leader in building a more secure digital economy.
- Support for EU and national policies related to security, including those focusing on prevention.
- Space-related research harnessed to support security.
- Better understanding of the complex and interrelated drivers and societal contexts of security challenges including in particular radicalisation and polarisation.

Components of the focus area, whose topics are identified as SU-xxx in the Horizon 2020 work programme, include actions from the LEIT-ICT, LEIT-Space and Societal Challenges 1, 3, 6 and 7. In addition, related activities are financed by other parts of the Horizon 2020 work programme including the European Research Council (ERC), the SESAR Joint Undertaking and the ECSEL Joint Undertaking.

Call - Protecting the infrastructure of Europe and the people in the European smart cities

H2020-SU-INFRA-2018-2019-2020

Threats against crowded areas and disruptions in the operation of our countries' infrastructure may limit the liberties of our citizens and put at risk the functioning of our societies and their economies. The security and resilience of Europe critical infrastructure needs to be ensured because disruptions in their operations may entail the collapse of large sectors of our activities. Threats on "softer" targets such as crowded areas may have less long-term physical impact, but may be highly damaging due to potentially large numbers of victims and subsequent psychological and sociological impacts.

The topics below in this Call "Protecting the infrastructure in Europe" will be part of the contribution of the Commission to the Cybersecurity contractual Public Private Partnership (cPPP), established in July 2016. This cPPP will facilitate the engagement of end-user operators in sectors that are important beneficiaries and customers of cybersecurity solutions towards defining and providing to the industry their sector-specific digital security, privacy and personal data protection common requirements.

Mission: The aim is to protect and improve the resilience of critical infrastructures, supply chains and transport modes.

Proposals are invited against the following topic(s):

SU-INFRA01-2018-2019-2020: Prevention, detection, response and mitigation of combined physical and cyber threats to critical infrastructure in Europe

Specific Challenge: Disruptions in the operation of our countries' critical infrastructure may result from many kinds of hazards and physical and/or cyber-attacks on installations and their interconnected systems. Recent events demonstrate the increase of combined physical and cyber-attacks due to their interdependencies. A comprehensive, yet installation-specific, approach is needed to secure existing or future, public or private, connected and interdependent installations, plants and systems. Budgetary constraints on both the public and private sectors mean that new security solutions must be more accurate, efficient and cost-effective, and possibly more automated than the ones currently available.

Scope: Proposals should cover: forecast, assessment of physical and cyber risks, prevention, detection, response, and in case of failure, mitigation of consequences (including novel installation designs), and fast recovery after incidents, over the life span of the infrastructure, with a view to achieving the security and resilience of all functions performed by the installations, and of neighbouring populations and the environment.

They should:

(a) address in detail all aspects of interdependent physical (e.g. bombing, sabotage and attacks with a variety of weapons against installations and buildings, plane or drone overflights and crashes, spreading of fires, floods, landslides, disastrous consequences of global warming, seismic activity, space weather, combined threats, etc.) and cyber threats and incidents (e.g. malfunction of SCADA system, non-authorised access of server, electronic interference, distributed attacks), and the cascading risks resulting from such complex threats,

(b) demonstrate the accuracy of their risk assessment approach using specific examples and scenarios of real life and by comparing the results with other risk assessment methodologies, and

(c) enhance real-time, evidence-based security management of physical and cyber threats, taking account of the ageing of existing infrastructure.

Innovative methods should be proposed for sharing information with the public in the vicinity of the installations - including through social media and with the involvement of civil society organisations -, for the protection of first responders such as rescue teams, security teams and monitoring teams, and for ensuring service continuity.

In 2018 and 2019, they should focus on any type of installation belonging to one of the following critical infrastructures: water systems, energy infrastructure (power plants and distribution, oil rigs), transport infrastructure (airports, ports, railways, urban multimodal nodes), communication infrastructures and ground segments of space systems, health services, e-commerce and the postal infrastructure, sensitive industrial sites and plants, and financial services. Priorities for 2020 will be defined at a later stage. When selecting for funding the proposals submitted in 2018 or 2019, the Commission will take due account of similar projects financed in the previous years since 2016, with a view to cover the largest possible spectrum of installations. Each year, a list of infrastructures excluded from the Call will be published on the participant portal.

Consortia should involve the largest variety of relevant beneficiaries, including infrastructure owners and operators, first responders, industry, technologists and social scientists, etc. The participation of SMEs is strongly encouraged.

In line with the EU's strategy for international cooperation in research and innovation⁴ international cooperation is encouraged, and in particular with international research partners in the context of the International Forum to Advance First Responder Innovation in which the Commission decided to participate⁵.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 7 – see General Annex G of the Horizon 2020 Work Programme.

Indicative budget: The Commission considers that proposals requesting a contribution from the EU of about EUR 7 to 8 million would allow this topic to be addressed appropriately.

⁴ COM(2012)497

⁵ COM(2017)2564

Nonetheless this does not preclude the submission and selection of proposals requesting other amounts

Expected Impact:

Short term:

- State-of-the-art analysis of physical/cyber detection technologies and risk scenarios, in the context of a specific critical infrastructure.
- Analysis of both physical and cyber vulnerabilities of a specific critical infrastructure, including the combination of both real situation awareness and cyber situation awareness within the environment of the infrastructure.

Medium term

- Innovative (novel or improved), integrated, and incremental solutions to prevent, detect, respond and mitigate physical and cyber threats to a specific Critical Infrastructure.
- Innovative approaches to monitoring the environment, to protecting and communicating with the inhabitants in the vicinity of the critical infrastructure.
- In situ demonstrations of efficient and cost-effective solutions.
- Security risk management plans integrating systemic and both physical and cyber aspects.
- Tools, concepts, and technologies for combatting both physical and cyber threats to a specific critical infrastructure.
- Where relevant, test beds for industrial automation and control system for critical infrastructure in Europe, to measure the performance of critical infrastructure systems, when equipped with cyber and physical security protective measures, against prevailing standards and guidelines.
- Test results and validation of models for the protection of a specific critical infrastructure against physical and cyber threats.
- Establishment and dissemination throughout the relevant user communities of specific models for information sharing on incidents, threats and vulnerabilities with respect to both physical and cyber threats.

Long term

- Convergence of safety and security standards, and the pre-establishment of certification mechanisms.
- Secure, interoperable interfaces among different critical infrastructures to prevent from cascading effects.

- Contributions to relevant sectorial frameworks or regulatory initiatives.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-INFRA02-2019: Security for Smart Cities and "soft" targets in Smart Cities

Specific Challenge: In the cities, malls, open crowded gathering areas and events, and non-restricted areas of transport infrastructures, constitute “soft targets”, that is potential, numerous targets spread across the urban area and subject to “low cost” attacks strongly impacting the citizens. The generation, processing and sharing of large quantities of data in smart cities make urban systems and services potentially more responsive, and able to act upon real-time data. On the one hand, smart cities provide for improving the security of open and crowded areas against threats (incl. terrorist threats) and risks, by leveraging wide networks of detection and prevention capabilities that can be combined with human response to crisis to enhance first responders' actions. On the other hand, the distinct smart technological and communication environments (urban, transport infrastructures, companies, industry) within a smart city require a common cybersecurity management approach.

Scope: The security and good operation of a smart and safe city relies on interconnected, complex and interdependent networks and systems: public transportation networks, energy, communication, transactional infrastructure, civil security and law enforcement agencies, road traffic, public interest networks and services.

Such networks provide with an efficient infrastructure for detection resources and "big data" collection. The screening of such data are being used by security practitioners to enhance their capabilities and performances. For instance, crowd protection and the security of public and government buildings can be improved through the identification of threats or of crime perpetrators, and the early detection of dangerous devices or products; first responders may get quicker on site by calculating in real time the shorter possible route to the scene of disaster.

Proposals under this topic should develop and integrate experimentally, in situ, the components of an open platform for sharing and managing information between public service operators and security practitioners of a large, smart city. The proposed pilots should consider how to combine, inter alia:

- Methods to detect weapons, explosives, toxic substances
- Systems for video surveillance
- Methods to identify, and neutralize crime perpetrators whilst minimizing intrusion into crowded areas

In designing the platform, proposals should:

- involve actively the security actors of the city area, their coordination and governance;
- solve interoperability issues, and ensure the interconnection and integration of the city smart systems with the systems supporting the security practitioners locally, including through modelling and simulating their interdependence;
- enhance the security of city smart systems, notably in terms of access control (e.g. with digital security measures such as layered authentication and access), secure communication and data storage, and address their possible misuse by criminals;
- consider mitigation strategies in the context of a variety of scenarios in order to increase resilience;
- integrate modules to simulate security incidents, and their consequences;
- integrate modules to measure the quantitative and qualitative impact of the platform on security;
- provide for the sharing, consolidation and analysis of multi-sourced data.

The proposals should also address at least one of the following key issues:

- Simulation, detection and analysis of the additional security threats and risks created through the interconnection of smart systems (e.g. IoTs, in particular those IoT objects used by security practitioners) and smart infrastructures (e.g. smart (government) buildings, smart railways, smart ports, smart factories, smart bridges, smart hospitals, large gathering of people in smart infrastructure) within a smart city;
- Delivery of a cyber-security framework to ease collaboration across all smart cities stakeholders, from urban planners to infrastructure operators, security practitioners, IT supervisors and providers across smart organizations within the city;
- Support and implementation of a common approach to securing and managing in a reliable and untamperable manner the data from all the smart infrastructures and systems hosted in a smart city supporting the citizens, the public authorities, the security practitioners, and the urban economy in creating transparent, efficient, accountable cyber-secure data-handling processes, in line with data protection legislation.

Digital security awareness should be integrated into the eco-system of humans, competences, services and solutions which should be able to adapt rapidly to the evolutions of cyber-threats or even to surpass them.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 7 – see General Annex G of the Horizon 2020 Work Programme.

Solutions are to be developed in compliance with European societal values, including privacy issues and fundamental rights. Full compliance with data protection legislations must be ensured in exploiting big data. Societal aspects (e.g. perception of security, possible effects of

technological solutions on societal resilience) have to be taken into account in a comprehensive and thorough manner.

The Commission considers that proposals requesting a contribution from the EU of about EUR 8 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact:

- Creation of dedicated, harmonised, advance cybersecurity solutions for smart cities adopting common approaches with all involved stakeholders (e.g. administrators of smart city/port/transport) balancing their – sometimes conflicting – goals (e.g. urban development, efficiency, growth, competitiveness, resilience).
- An easier level of integration by developing a holistic cyber-security framework for smart cities that benefits all smart infrastructures hosted within it (e.g. smart buildings, smart ports, smart railways, smart logistics).
- IoT ecosystems (rather than distributed IoT infrastructures) built adopting common approaches in their cybersecurity management, achieving economies of scale (e.g. avoiding duplication of efforts in the analysis of IoT data, selection of cybersecurity controls).
- Novel tools and systemic approaches to protect citizens against threats to soft targets in a Smart City.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

Conditions for the Call - Protecting the infrastructure of Europe and the people in the European smart cities

Opening date(s), deadline(s), indicative budget(s):

Topics (Type of Action)	Budgets (EUR million)			Deadlines
	2018	2019	2020	
Opening: 15 Mar 2018				
SU-INFRA01-2018-2019-2020 (IA)	24.00			23 Aug 2018
Opening: 15 Mar 2019				
SU-INFRA02-2019 (IA)		16.00		22 Aug 2019

*Horizon 2020 -
Secure societies - Protecting freedom and security of Europe and its citizens*

SU-INFRA01-2018-2019-2020 (IA)		22.00		
Opening: 15 Mar 2020				
SU-INFRA01-2018-2019-2020 (IA)			18.00	27 Aug 2020
Overall indicative budget	24.00	38.00	18.00	

Indicative timetable for evaluation and grant agreement signature:

For single stage procedure:

- Information on the outcome of the evaluation: Maximum 5 months from the final date for submission; and
- Indicative date for the signing of grant agreements: Maximum 8 months from the final date for submission.

Eligibility and admissibility conditions: The conditions are described in General Annexes B and C of the work programme.. The following exceptions apply:

SU-INFRA01-2018-2019-2020	<p>At least 2 operators of the chosen type of critical infrastructure operating in 2 Member States or Associated Countries must be beneficiaries (possibly, but not necessarily: coordinator) of the grant agreement and should be directly involved in the carrying out of the tasks foreseen in the grant.</p> <p>The participation of industry able to provide security solutions is required.</p> <p>The duration of the proposed activities must not exceed 24 months.</p>
SU-INFRA02-2019	<p>At least the local governments of 2 cities or metropolitan areas in 2 Member States or Associated Countries must be beneficiaries (possibly, but not necessarily: coordinator) of the grant agreement and should be directly involved in the carrying out of the tasks foreseen in the grant.</p> <p>The participation of industry able to provide security solutions is required.</p> <p>The duration of the proposed activities must not exceed 24 months.</p>

Evaluation criteria, scoring and threshold: The criteria, scoring and threshold are described in General Annex H of the work programme.

Evaluation Procedure: The procedure for setting a priority order for proposals with the same score is given in General Annex H of the work programme.

The full evaluation procedure is described in the relevant [guide](#) published on the Participant Portal.

Consortium agreement:

	Members of consortium are required to conclude a consortium agreement, in principle prior to the signature of the grant agreement.
--	--

DRAFT

Call - Security

H2020-SU-SEC-2018-2019-2020

Disaster-Resilient Societies

Securing itself against, and being prepared for disasters is one of the central elements of the functioning of any society. Societal functions which is not to some extent exposed to natural or man-made disasters and related resilience and security issues.

Mission: The aim of this section is to advance innovation in the society at large, and among first responders (as acknowledged within the International Forum to Advance First Responder Innovation in which the Commission decided to participate ⁶) to reduce the loss of human life and to reduce environmental, economic and material damage from natural and man-made disasters, including from climate-related weather events, earthquakes and volcanic events, space weather events, industrial disasters, crime and terrorism threats.

Proposals are invited against the following topic(s):

SU-DRS01-2018-2019-2020: Human factors, and social, societal, and organisational aspects for disaster-resilient societies

Specific Challenge: The resilience of societies heavily depends on how their citizens behave individually or collectively, and how governments design and implement policies when mitigating risks, preparing for, reacting to, overcoming, and learning from disasters. The spread of new technologies and media are inducing dramatic changes in how individuals and communities behave, and how they are affecting societies in unpredictable ways. Building the resilience of society and its citizens requires a better understanding and implementation of these new technologies, media and tools, to raise disaster risk awareness, to improve citizen understanding of risks, to build a culture of risks in society, to improve functional organization in most fragile and vulnerable environments, and to enhance health services, social services, education, governance (as per one target of the "Sendai Framework": 'Substantially reduce disaster [...] disruption of basic services, among them health and educational facilities, including through developing their resilience by 2030').

Scope: Proposals are invited to address related research and innovation issues, in particular:

Recent dramatic events related either to natural causes (including climate-related hazards) or to terrorist attacks have shown gaps in the level of preparedness of European society for disasters, and therefore the importance of increasing risk awareness, preparation, and resilience among the people and the policy- and decision-makers in Europe. There is much that can be learned from countries constantly under natural threat (e.g. Japan with high-levels of risks of earthquakes, volcanic events, and tsunamis) and where risk is perceived differently.

⁶ COM(2017)2564

Research is required with a view to creating a resilient society in Europe, and to inducing cultural changes among individuals, business managers, government officials, and communities. It should encompass prevention (education, risk awareness) and preparedness (knowing how to react), emergency management (communication before and during an event), response (empowering citizens to act by themselves according to more effective practices and following established guidelines), and recovery. Diversity in risk perception, in vulnerabilities and in understanding responses to crises requires research that addresses the issues of geographical diversity (within Europe), attitudes, institutional and social trust, gender and socio-economic contexts, in order to propose new approaches and strategies for community awareness, for leadership, and for crisis readiness and management.

Over the past few years several ways to exploit social media and other crowd-sourced data in emergency situations have been studied, and some put in place, the impact of which are not well known. Research is needed to assess such practices for different disaster scenarios (natural hazards, industrial disasters, terrorist threats) involving different actors, including first responders, city authorities and citizens. Research should analyse both the positive and negative roles of social media and crowd-sourced data in crisis situations: in the wake of a terror attack or natural disaster they offer an incredibly quick and easy way to relieve friends and family from worry; they have been used to spread early warnings and important safety information. However, social media may also be used to spread false statements and to overstate threats, so the validation processes of information should also be addressed. Research also needs to enhance communication solutions between first responders and the victims and citizens in the affected area.

For achieving disaster-resilient societies that cope with disasters and build back better (as per the "Sendai Framework"), the research community needs to transfer research outputs in an appropriate manner to meet citizen expectations given the current levels of risk acceptance, risk awareness, and involvement of civil society organisations in a mediating role.

Civil society organisations, first responders, (national, regional, local, and city) authorities are invited to propose strategies, processes, and methods to enable citizens better to access research results related to disaster resilience, and to prepare the ground for exercises involving citizens. These strategies, processes, and methods should be tested with citizens and communities representative of European diversity and for different types of disaster, in particular with regards to citizens' individual capacities and their involvement in checking and validating proposed tools, technologies and processes for disaster management. Studies will assess the value of raising awareness about relevant research among citizens and communities.

Research should look into how to implement the concept of 'Building Back Better' of the Sendai Framework, taking account of tangible and intangible cultural heritage, traditional know-how, including land use, construction technologies, and other local knowledge which are valuable sources of information for the local communities to prevent the creation of new risks, to reduce existing risks, to prepare, to respond to, and to recover from disasters.

Proposals should be submitted by consortia involving relevant security practitioners and civil society organisations. Research should contribute to the understanding of society's awareness to risks in Europe in order to provide recommendations for the development of a culture of improved preparedness, adaptability, and resilience to risks, including the use of social media and crowd-sourced data, and the involvement of the citizens in the investigations and possible validation of tools and methods.

In line with the objectives of the Union's strategy for international cooperation in research and innovation (COM(2012)497), international cooperation according to the current rules of participation is encouraged (but not mandatory), in particular with Japan: Co-funding opportunities from the Japan Science and Technology Agency exist for Japanese partners. For more information, please consult http://www.jst.go.jp/sicp/announce_eujoint_03_GeneralInfo.html.

The Commission considers that proposals requesting a contribution from the EU of about EUR 5 million would allow this specific challenge to be addressed appropriately through multidisciplinary projects confronting different schools of thoughts. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: As a result of this action, Member States and Regional authorities as well as City and Metropolitan authorities should benefit from recommendations and tools aimed at improving the adaptability and preparedness of societies to different disaster risks, including:

- Comparative analysis of different approaches to adapt to, and be prepared for risks in different countries (both within and outside the European Union), and among communities in precarious socio-economic conditions;
- Advances through the cross-fertilisation of concepts resulting from the collision of different ways of thinking and of different approaches developed by various partners in the proposals;
- Identification of existing tools and guidelines for an improved prevention (including risk understanding and communication), preparedness (including training involving citizens), alert systems and their recognition by citizens, responses using citizen's competencies and local knowledge, and recovery;
- Improved information exchanges among different actors involved, including first responders, local authorities, schools, and citizen representatives;
- Field-validation of different approaches related to different disaster risks involving the above actors, in representative urban and non-urban environments, including in areas where precarious socio-economic conditions prevail;
- Intensive sharing, among communities, of good practices and of learnings resulting from citizen-scientist interaction;
- A consolidated, common European understanding of disaster resilience.

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DRS02-2018-2019-2020: Technologies for first responders

Specific Challenge: Resilience is critical to allow authorities to take proper measures in response to severe disasters, both natural (including climate-related extreme events) and man-made. Innovation for disaster-resilient societies may draw from novel technologies, provided that they are affordable, accepted by the citizens, and customized and implemented for the (cross-sectoral) needs of first responders.

Scope: Proposals are invited to propose novel solutions improving the protection of first responders against multiple and unexpected dangers, or enhancing their capacities by addressing related research and innovation issues, in particular:

- Sub-topic 1: [2018] Victim-detection technologies

The quick detection of victims potentially trapped in buildings as a result of disasters of natural origins (earthquake, landslides, avalanche), accidental (explosions), or of a terrorist origin is a major issue for first responders. Novel technologies should enable them to save the time taken to detect victims who are not visible, enabling more efficient and faster rescue operations leading to higher chances of saving lives and reducing injuries.

- Sub-topic 2: [2019] Innovation for rapid and accurate pathogens detection

Novel technologies are required by first responders for the rapid and accurate detection of pathogens, as well as tools for joint epidemiological and criminal risk and threat assessment and investigation.

- Sub-topic 3: [2020] Methods and guidelines for pre-hospital life support and triage

Innovative methodologies and guidelines need to be developed, based on specific use-cases, for improved pre-hospital life support, damage control, and triage of victims.

- Sub-topic: [2018-2019-2020] Open

Other technologies for use by first responders may be subject of proposals provided that they involve a large number of first responders' organisations (see eligibility and admissibility conditions.) For instance, but not exclusively: communicating and smart wearables for first responders and K9 units including light-weight energy sources; situational awareness and risk mitigation systems for first responders using UAV and robots, connected and swarms of drones; systems based on the internet of things; solutions based on augmented or virtual reality; systems communication solutions between first responders and victims; risk anticipation and early warning technologies; mitigation, physical response or counteracting technologies; etc.

Any novel technology or methodology under this topic should be tested and validated, not just in laboratories but also in training installations and through in-situ experimental deployment. They therefore need to be quick to deploy, based on resilient and robust communication infrastructure. First responders, including through interdisciplinary teams (e.g. involving medical emergency services, public health authorities, law enforcement team, civil protection professionals, etc.) need to be involved in these activities. Proposals should address the participation of first responders in a systematic manner, and propose new methods on how to involve them and to organise their interaction with researchers when developing, testing, and validating technologies and methods.

Solutions are to be developed in compliance with European societal values, including privacy issues and fundamental rights. Societal aspects (e.g. perception of security, possible effects of technological solutions on societal resilience) have to be taken into account in a comprehensive and thorough manner.

In line with the objectives of the Union's strategy for international cooperation in research and innovation (COM(2012)497), international cooperation according to the current rules of participation is encouraged (but not mandatory), in particular with Korean or Japanese research centres. Co-funding opportunities from the Korean MSIP/NRF exist for Korean partners. For more information, please consult <http://www.nrf.re.kr/eng/main> and http://www.nrf.re.kr/biz/info/notice/view?nts_no=82388&biz_no=116&search_type=ALL&search_keyword=EU&page=. Co-funding opportunities from the Japan Science and Technology Agency exist for Japanese partners. For more information, please consult http://www.jst.go.jp/sicp/announce_eujoint_03_GeneralInfo.html.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 4 to 6 – see General Annex G of the Horizon 2020 Work Programme.

The Commission considers that proposals requesting a contribution from the EU of about EUR 7 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: As a result of this action, first responders should benefit from:

- Novel tools, technologies, guidelines and methods aimed at facilitating their operations
- New knowledge about field-validation of different tools, technologies and approaches involving first responders in (real-life) scenarios

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DRS03-2018-2019-2020: Pre-normative research and demonstration for disaster-resilient societies

Specific Challenge: A reason for the difficult interaction among practitioners, and for the low levels of interoperability of equipment and procedures implemented by first responders, lies in there being insufficient harmonisation and standardisation, which pre-normative research and demonstrations may address effectively.

The security market in Europe is an institutional market highly fragmented (because of the lack of standardization and harmonised certification), with a strong societal dimension (it directly affects in many ways the citizens). In this context, the Mandate M/487 to Establish Security Standards coordinated by the European Committee for Standardization has clearly recognized the crisis management and civil protection as one of the three priorities for establishing standards in the security sector. It has identified the need for crisis management and civil protection standardization activities to facilitate response, effectiveness, efficiency and cooperation as top priorities, especially in what regards to natural hazard emergencies.

Scope: Proposals are invited to address issues related to pre-standarisation, in particular:

- Sub-topic 1: [2018] Pre-standardisation for the security of water supply

For several years research actions have led to the development of detection technologies to analyse drinking water. Based on the legacy of FP7-funded actions, clearer strategies to integrate current technologies in the existing water safety network should be designed. Testing facilities should interconnect the safety- and security-related networks of sensors that are deployed among water supply and distribution networks. The focus of action should be on networking testing facilities developed by water utilities to demonstrate the use of current sensor technologies for the purpose of both safety and security of water, including methods to monitor reservoirs, and sea or river levels for early warning.

- Sub-topic 2: [2019] Pre-standardisation in CBRN-E crisis management

Generally speaking, the development of standards for civil protection in the areas of CBRN-E and crisis management (including for CBRN-E systems, tools and services) will increase interoperability of equipment and procedures. Innovation actions should bring validated and positively-assessed practices into standards within or outside current standardisation processes. The involvement of well-established standardisation organisations is required. The complementarity of the proposed activities with activities supported by the European Defence Agency (EDA) should be described comprehensively.

- Sub-topic 3: [2020] First aids vehicles deployment, training, maintenance, logistic and remote centralized coordination means

Improved standards are required for an effective deployment of resources during the advent of a major crisis related to any kind of disaster either natural (including climate-related extreme events) or man-made, when there are strong cross-sector, cross-border, cross-hierarchy

coordination activities ongoing. Proposals under this sub-topic should pave the way to such improved standards.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 6 to 7 – see General Annex G of the Horizon 2020 Work Programme.

The Commission considers that proposals requesting a contribution from the EU of about EUR 6 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Medium term:

- [2018] full awareness of water supply facilities about the necessity of designing monitoring networks capable of detecting both contamination risks (safety) and deliberate poisoning (security);
- [2019] standards for interoperable equipment and procedures in the CBRN-E and crisis management areas in support to operations involving international crews;
- [2020] standards for an effective deployment of resources to respond to major crisis.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DRS04-2019-2020: Chemical, biological, radiological and nuclear (CBRN) cluster

Specific Challenge: Technologies and innovations in the field of CBRN are developed by companies which often face difficulties in bringing them to markets. At least three reasons may be identified:

- they address local, small niche markets;
- these companies have neither the capabilities nor the strategic objective to go for foreign markets;
- the individual technologies that they develop can make it to the market only if integrated and combined with other tools by other companies that have the capabilities and the strategy to market products abroad, and possibly on the global market.

In this context a platform has been established further to the response to topic SEC-05-DRS-2016-2017 in 2016. A larger number of innovative technologies, devices and services need to be added to this platform.

Scope: In 2019 and 2020 the Commission will select several RIAs aiming at research and development of novel CBRN technologies and innovations identified in the catalogue that is

updated by the ENCIRCLE project on a regular basis. Each of these actions will be led by an SME. Each consortium implementing such a RIA must not only establish a consortium agreement among its members, but also an agreement with the participants in the ENCIRCLE project which must settle how the results from the RIA will be exploited and integrated into platforms managed by ENCIRCLE.

Where applicable, the complementarity of the proposed activities with activities supported by the European Defence Agency (EDA) should be described comprehensively.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 4 to 8 – see General Annex G of the Horizon 2020 Work Programme.

Indicative budget: The Commission considers that proposals requesting a contribution from the EU of about EUR 3.5 million per action for this topic to be addressed appropriately. Nonetheless this does not preclude submission and selection of proposals requesting other amounts.

The following options of the Model Grant Agreement will be implemented:

- Option 1 of Article 41.3 of the [Model Grant Agreement](#) will be applied.
- *Grants awarded under this topic will be complementary to the grant agreement under **SEC-05-DRS-05-2016-2017 part a)**. The respective options of Article 2, Article 31.6 and Article 41.4 of the Model Grant Agreement⁷ will be applied.*

Expected Impact:

- Shorter time to market for novel CBRN technologies and innovations
- More business deals leading to industrial products of interest to more practitioners in Europe (and world-wide).

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-DRS05-2019: Methodical demonstration of novel concepts for the management of pandemic crises

Specific Challenge: Large-scale pandemics constitute an ever growing threat in the globalized society and the increasing flows of goods and people among continents, which ought to be addressed internationally, and with the involvement of a large variety of practitioners, from planners in national health systems, to first responders.

⁷ http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/amga/h2020-amga_en.pdf

Scope: In 2014 an exploratory phase was called for (in DRS4 of the 2014 Call in Societal Challenge 7) to address the feasibility of strengthening capacity-building for health and security protection in case of large-scale pandemics (phase 1). The resulting project has issued a range of recommendations for research gaps to be addressed in priority. It has also proposed innovative concepts to integrate better the existing tools and systems for health and security protection in case of large-scale pandemics, taking into account potential impacts of climate change.

All these recommendations and proposals will be made public on the portal of the Call in due time.

Demonstrations are now required to assess these novel concepts, in support of cross-border emergency approaches (phase 2), to strengthen preparedness and response to pandemics, in line with Decision 1082/2013/EU on serious cross-border threats to health⁸ and the International Health Regulations (WHO, 2005)⁹.

The Commission considers that proposals requesting a contribution from the EU of about EUR 10 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Short term:

- A model emergency framework for health and security protection in the case of large-scale pandemics, validated by international organizations and a large number of EU Member States.
- A prototype IT system integrating innovative tools, and supporting the functions of the model emergency framework.
- Novel concepts for health and security protection in the case of large-scale pandemics, based on the above framework and IT systems supporting cross-border preparedness and crisis management, and demonstrated in situ.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

Fight Against Crime and Terrorism

Mission: The ambition of the activities under "Fight against Crime and Terrorism" is to mitigate potential consequences of crime- and/or terrorism-related incidents or to avoid them. To this end, new technologies and capabilities are required. They should address the fight against and the prevention of crime (including cyber-crime), illegal trafficking and terrorism

⁸

⁹ http://www.who.int/topics/international_health_regulations/en/

(including cyber-terrorism and CBRN-E attacks), along with understanding and tackling terrorist ideas and beliefs. Human factors and the societal context should be taken into account, whilst respecting fundamental rights, including privacy, protection of personal data and the free movement of persons.

Proposals are invited against the following topic(s):

SU-FCT01-2018-2019-2020: Human factors, and social, societal, and organisational aspects to solve issues in fighting against crime and terrorism

Specific Challenge: The free and democratic EU society, based on the rule of law, mobility across national borders, globalised communication and finance infrastructure, provides many opportunities to its people. However, the benefits come along with risks related to crime and terrorism, a significant number of which have cross-border impacts within the EU. Security is a key factor to ensure a high quality of life and to protect our infrastructure through preventing and tackling common threats. The EU must play its part to help prevent, investigate and/or mitigate the impact of criminal acts, whilst protecting fundamental rights. The consistent efforts made by EU Member States and the EU to that effect are not enough, especially when criminal groups and their activities extend far beyond national borders.

Scope: The Lisbon Treaty enables the EU to act to develop itself as an area of freedom, security and justice. The EU Security Union is now in the building, and requires an EU-wide approach to security that integrates prevention, investigation and mitigation capabilities in the area of the fight against crime.

The globalisation of communications and finance infrastructure allows crime to develop and take new forms. Trafficking in human beings for all forms of exploitation purposes is a serious and organised crime often with cross-border dimension, violating fundamental rights of the individuals and creating a security challenge. Prevention of child sexual abuse and exploitation is another area where research is acutely needed. The use of the internet as a platform for child sex offenders to communicate, store and share child sexual exploitation material and to hunt for new victims continues to be one of the internet's most abhorrent aspects. Cybercriminality, as a whole, is not satisfactorily understood nor properly addressed; the constantly expanding attack surface combined with the ever increasing number of attack vectors requires a more structured approach. Radicalisation is yet another challenge of our society that requires a multi-disciplinary approach, with policy recommendations and practical solutions to be implemented by a variety of policy-makers and practitioners.

Proposed approaches need to rely on existing knowledge and to exclude approaches that have previously failed. The societal dimension of fight against crime and terrorism should be at the core of the proposed activities. Proposals should be submitted by consortia involving relevant security practitioners and civil society organisations, each under only one of the following sub-topics:

- Sub-topic 1: [2018] Trafficking of human beings and child sexual exploitation – prevention, and protection of victims

Both child sexual exploitation, and the trafficking of human beings are facilitated by globalisation and technological developments. A variety of preventive measures, as well as measures to ensure adequate victim protection and assistance are needed, that build upon advances in social sciences and humanities.

Proposals in this subtopic should address both phenomena in parallel, and in a balanced way:

With respect to the trafficking of human beings, research should bear on:

- how to prevent the phenomenon, and to reduce the demand for all forms of exploitation in the trafficking chain and its legal and illegal sectors. The analysis of possible involvement of organized crime groups implicated in trafficking of human beings in other crimes as well (e.g., financial crimes) is recommended;
- how to investigate cases involving the trafficking of human beings;
- how to mitigate the impact on victims in the short and long term.

Regarding child sexual exploitation:

- how to address new threats, such as live-streaming of child abuse and coercion and extortion of victims that have escalated in the last years;
- how to provide law enforcement with effective means to detect, investigate and bring down the many peer-to-peer networks and the growing number of forums on the darknet that facilitate the exchange of child sexual exploitation material and support offenders;
- how to help victims of abuse during criminal investigations and court procedures;
- how to help the victims in the long term, to help them deal with the effects;
- how to reduce risks of (re-)offending by better understanding the behaviour of abusers and potential abusers.

Interdisciplinary approaches to both issues are recommended, and cross-fertilization is encouraged where appropriate, in particular as regards to victim protection.

- Sub-topic 2: [2019] Understanding the drivers of cybercriminality, and new methods to prevent, investigate and mitigate cybercriminal behaviour

The "internet of things", the ever increasing number of internet-facing devices may pose substantial threats to (cyber)security, as the internet has become a target for cybercriminals. The key challenge with this respect is to determine what the drivers of new forms of cyber criminality are and how they might be prevented and mitigated. The dissemination of "cybercrime-as-a-service" business models is an important enabler for crime and poses significant challenges to security. The increasing variety of such services, the modalities through which they are offered and the connections with different criminal activities need to be investigated to understand their trends and allow for prevention and law enforcement.

Human factors determining online behaviour as described for instance by the online disinhibition effect (individuals acting bolder online, being less inhibited, and judgement impaired) are drivers for cybercrime as individuals feel disconnected from the actual crime or do not perceive it as a crime in the first place. Recent trends indicate also a growth in cyber juvenile delinquency and a rise in adolescent hacking.

These developments call for further research in domains such as psychology, criminology, anthropology, neurobiology and cyber psychology to better understand the factors contributing to it and to devise preventive and deterrence measures, including providing alternatives to harness the potential of these young talents for cybersecurity and technologies.

- Sub-topic 3: [2020] Developing comprehensive multi-disciplinary and multi-agency approaches to prevent and counter violent radicalisation in the EU

Of particular interest: how to address returnees, with a special focus on children and women, and how they relate to petty crime; the role of social media as regard to radicalisation; resurgence of lone actor phenomenon: gender aspects of radicalisation; counter-narratives and alternative narratives; polarisation in society; the shift from risk factors to resilience factors; and recruitment for radical activities. Proposals should refer to research that compared various approaches to these issues, and build on the assessment and evaluation of current and past counter and de-radicalisation initiatives. In line with the EU's strategy for international cooperation in research and innovation, international cooperation is encouraged.

- Sub-topic: [2018] Open

Proposals addressing other way to solve human, social, and societal issues in fighting against crime and terrorism, and supported by large numbers of practitioners are invited to apply under this sub-topic (see eligibility and admissibility conditions.)

Proposals should lead to solutions developed in compliance with European societal values, fundamental rights and applicable legislation, including in the area of privacy, protection of personal data and free movement of persons. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner.

The Commission considers that proposals requesting a contribution from the EU of about EUR 5 million would allow this specific challenge to be addressed appropriately through multidisciplinary projects confronting different schools of thoughts. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Medium term:

- improved and consolidated knowledge among EU Law Enforcement Agencies officers on the issues addressed in this topic
- exchange of experiences among the EU Law Enforcement Agencies (LEAs) about human, social and societal aspects of security problems and their remedies;

- policy-making toolkits for security policy-makers, to support the establishment of a European Security Model;
- toolkits for LEAs and/or civil society organisations, validated against practitioners' needs and requirements to facilitate their daily operations;

Long term:

- European common approaches for assessing risks/threats, and identifying and deploying relevant security measures, which take into account legal and ethical rules of operation, cost-benefit considerations, as well as fundamental rights such as the rights to privacy, to protection of personal data and the free movement of persons.
- Support towards the implementation of the European Security Union by strengthening the perception by citizens of the EU as an area of freedom, justice and security.
- Advances through the cross-fertilisation of concepts resulting from the collision of different ways of thinking and of different approaches developed by various partners in the proposals;

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-FCT02-2018-2019-2020: Technologies to enhance the fight against crime and terrorism

Specific Challenge: Organized crime and terrorist organisations are often at the forefront of technological innovation in planning, executing and concealing their criminal activities and the revenues stemming from them. Law Enforcement Agencies (LEAs) are often lagging behind when tackling criminal activities supported by advanced technologies.

Scope: There is a growing need to focus on technology opportunities provided by new and emerging technologies. To this end, it is necessary to identify new knowledge and targeted technologies for fighting old, new and evolving forms of criminal and terrorist behaviour supported by advanced technologies. Challenges are numerous. In conventional investigations, rapid and near real-time forensics is often crucial for preventing subsequent attacks or crimes. A consequence of the increasing digitisation of society and ever increasing adoption levels is that virtually any type of crime has a digital forensics component, which is a challenge in itself. Money-flow tracking represents yet another challenge. The issues of location and jurisdiction need to be addressed, taking into account highly probable cross-border nature of such crimes.

Proposals should be submitted under only one of the following sub-topics:

- Sub-topic 1: [2019] Trace qualification

Forensic analysis of trace material can be extremely helpful in the initial phase of investigation, if the answers are rapid (near real-time), at an acceptable cost and compliant with criminal justice. Novel robotized or automated tools for forensic analysis should be developed. There is a need for a better knowledge and interpretation of: trace composition, time when they were left, cause of their origin (crime-related or inoffensive), etc.

- Sub-topic 2: [2018] Digital forensics in the context of criminal investigations

New forensic tools, techniques and methodologies are needed, based on common practices, standards, protocols and/or interoperability requirements that allow for rapid retrieval, storage, analysis and validation of digital evidence (including the one stored in the cloud) that upholds in court, and enables investigations to identify perpetrators as well as victims, in particular in cases of child sexual abuses. They should focus on data gathering, data exploitation, and speedy exchange of information. All types of crime, terrorist activities and propaganda, and malicious acts by foreign-state perpetrators are concerned. Research in this domain should take into account new and emerging trends (for instance, abuse of encryption for criminal or terrorist purposes), while fully respecting fundamental rights and privacy.

- Sub-topic 3: [2020] Money flows tracking

Organized crime increasingly uses internet/Darknet as a facilitator for preparation, organisation and execution of various physical/traditional criminal activities (e.g., child sexual abuse, trafficking of human beings, trafficking of firearms, terrorism) and/or as a tool for online criminal activities (e.g., ransomware, domain-name piracy, phishing). Here, research should address: approaches to identify changing tracks (new markets and networks); tools for tracing money-flow/criminals online whilst ensuring privacy and protection of personal data; Darknet marketplace analysis and mobility; tools for locating and mapping hidden service directories; data provenance models (providing court-proof evidence).

- Sub-topic: [2018-2019-2020] Open

Proposals addressing other issues relevant to this challenge (for instance: technologies to improve LEAs capabilities (including augmented reality); autonomous systems to improve the fight against crime and terrorism; technologies to support better protection of public figures; tracking and monitoring technologies; capabilities to detect the widest possible range of threats and concealments (including complex concealed weapons)) and supported by a large number of practitioners are invited to apply under this sub-topic (see eligibility and admissibility conditions.)

In all sub-topics and in order to facilitate the EU-wide take-up of new technologies, proposers are encouraged to include the design of innovative curricula for LEAs training and (joint) exercises, and of information packages for the wider public and civil society organisations.

Proposals should lead to solutions developed in compliance with European societal values, fundamental rights and applicable legislation including in the area of privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of

technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 4 to 6 – see General Annex G of the Horizon 2020 Work Programme.

The Commission considers that proposals requesting a contribution from the EU of about EUR 7 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Medium term:

- novel, user-friendly technologies, tools and/or systems, addressing traditional or emerging forms of crime and terrorism at acceptable costs;
- improved investigation capabilities, especially regarding quality and speed;
- increased efficiency and effectiveness of the information sharing among EU LEAs;

Long term:

- prevention/reduction of criminal and terrorist threats;
- harmonisation of information formats at international level, improved cross-border acceptance and exchange of court-proof evidence, standardised evidence collection and harmonised procedures in the investigation of trans-border crimes.

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-FCT03-2018-2019-2020: Information and data stream management to fight against (cyber)crime and terrorism

Specific Challenge: Large amounts of data and information from a variety of origins have become available to practitioners involved in fighting crime and terrorism. Full advantage is not currently taken of the most advanced techniques for Big Data analysis, and artificial intelligence.

Scope: The amount of data generated and gathered in the frame of (cyber)crime investigations increases exponentially, thereby creating a considerable challenge for law enforcement. The effectiveness of law enforcement action depends on the capability to improve the quality of, and to convert voluminous and heterogeneous data sets (images, videos, geospatial intelligence, communication data, traffic data, financial transactions related data, etc.) into actionable intelligence. They could be enhanced in a significant manner by the use of domain-

specific tools, i.e. big data analysis applications designed for the needs of crime investigators (pre-processing, processing and analysis, visualisation, etc.). Furthermore, predictive analytics would greatly benefit from open source intelligence gathering, social network and darknet data analysis, and allow for resource-efficient, effective and proactive law enforcement.

Examples of trends in cybercrime are numerous, The internet of things connects practically everything, thus making everything more vulnerable as well. Wearable devices make us traceable, 3D printers can produce weapons, autonomous cars provide opportunities for kidnappers, teleworking opens doors for cyber-espionage etc. Cybercriminals follow the technological development and benefit from it, while measures for countering cybercrime are often one step behind. LEAs would benefit from new means of preventing and countering new kinds of crime, building on the comprehensive trend analysis of emerging cybercrime activities based on past of (cyber)criminal activities, on technological developments, and on trends in the society.

Criminal and terrorist acts are usually subsequent to abnormal behaviours. Behavioural/anomaly detection systems (using a large variety of sensors) and methodologies require the analysis and processing of enormous quantities of data, together with improved imaging techniques to allow for the identification of suspicious events or of criminals. Such systems should operate in near real-time and at similar distances as a surveillance camera. They should also comply with privacy requirements and the respect of fundamental rights.

Proposals are invited from consortia involving relevant security practitioners, civil society organisations, and the appropriate balance of IT specialists, psychologists, sociologists, linguists, etc. exploiting big data and predictive analytics: a) to characterize trends in cybercrime and in cybercriminal organizations (based on a profound analysis of current and emerging cybercriminal organizational types and structures), and b) to enhance citizens' security against terrorist attacks in places considered as soft targets, including crowded areas (stations, shopping malls, entertainment venues, etc.).

Proposals should lead to solutions developed in compliance with European societal values, fundamental rights and applicable legislation including in the area of privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 5 to 7 – see General Annex G of the Horizon 2020 Work Programme.

The Commission considers that proposals requesting a contribution from the EU of about EUR 8 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Medium term:

- improved support for the work of LEAs in managing big data, i.e. in extracting, combining, analysing and visualising large amounts of structured and unstructured data in the context of criminal investigations;
- increased awareness regarding the state of the art and trends in cybercriminal activities (short-, mid- and long-term);
- in-depth knowledge of means of preventing and countering emerging and future cybercriminal activities;
- improved capabilities to combine and analyse in near-real-time large volumes of heterogeneous data to anticipate criminal events;
- shorter delays between the emergence of new cybercrime activities and the deployment of countermeasures.

Long term:

- a European, common strategic approach for preventing and countering an emerging cybercrime activity in its early stage of development;
- a European, common strategic approach for processing and combining huge amount of data in the context of crowd protection.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-FCT04-2020: Explosives: detection, intelligence, forensics

Specific Challenge: Terrorists and other criminals are constantly seeking new ways to develop, deploy, activate and detonate explosives. Their manufacturing methods evolve continuously, which makes the specialized work of law enforcement agencies (LEAs) in this area a continuous challenge. R&D support needs to anticipate and match the next possible innovation to increase deterrence messaging and confidence whilst also recognising the need to reduce the inconvenience this places on passengers and staff, increase the speed of the screening process and reduce the cost to airports/airlines.

Scope: To be defined in 2019.

The Commission considers that proposals requesting a contribution from the EU of about EUR 10 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

Border and External Security

This section concerns strengthening security through border management. This includes both control and surveillance issues, on land and in the maritime domain. It contributes to the further development of the European Border Surveillance System (EUROSUR), its interoperability with other systems, and to enhance the use of new technology for border checks, also in relation to the Smart Borders legislative initiative. It also addresses supply chain security in the context of the EU's customs policy, and migrant smuggling.

Mission: The aim is to develop technologies and capabilities which are required to enhance systems and their interoperability, equipment, tools, processes, and methods for rapid identification to improve border security, whilst respecting fundamental rights including free movement of persons, protection of personal data, and privacy. New technologies, capabilities and solutions are also required to support the Union's external security policies in civilian tasks, ranging from civil protection to humanitarian relief, border management, law enforcement, or peace-keeping and post-crisis stabilisation, including conflict prevention, peace-building and mediation. This will also require research on conflict resolution and restoration of peace and justice, early identification of factors leading to conflict and on the impact of restorative justice processes.

Proposals are invited against the following topic(s):

SU-BES01-2018-2019-2020: Human factors, and social, societal, and organisational aspects of border and external security

Specific Challenge: Border and external security may depend on a variety of human factors, and social and societal issues. The adoption of appropriate organisational measures, and the deeper understanding of how novel technologies and social media impact border control are required. One main challenge is to manage the flow of travellers and goods arriving at our external borders, while at the same time tackling irregular migration and enhancing our internal security. Any novel technology or organisational measure will need to be accepted by the European citizens.

Scope: Proposals are invited to address related research and innovation issues, each under only one of the following sub-topics:

- Sub-topic 1: [2018] Detecting security threats possibly resulting from certain perceptions abroad, that deviate from the reality of the EU

Research should investigate how to better detect and understand how the EU is perceived in countries abroad by analysing e.g. social media data, how such perception could possibly lead to threats and security issues on its citizens and territories, and how such perceptions can be avoided or even actively and effectively counteracted through various measures. In line with the objectives of the Union's strategy for international cooperation in research and innovation

(COM(2012)497), international cooperation according to the current rules of participation is encouraged.

- Sub-topic 2: [2019] Modelling, predicting, and dealing with migration flows to avoid tensions and violence

Better modelling and predicting migration flows, based on a sound analysis, is required for high level strategic decision-making, to plan and implement operational activities. For the management of the migratory flow, including relocations within the EU, it is necessary to map public sentiment, including perceptions of migration, by analysing data available from many different governmental or public sources, and by developing socio-economic indicators of integration strategies. Proposals should be solution-oriented and propose convincingly how to better deal with such flows and to reduce risks of tensions and violence among migrants and European citizens.

- Sub-topic 3: [2020] Developing indicators of threats at the EU external borders on the basis of sound risk and vulnerability assessment methodologies

Threat factors at the EU external borders range from uncontrolled, massive flows of people arriving at the borders to the use of counterfeit documents. Proposals need to develop indicators for the analysis and management of the risks at the border, with a view to improve the effectiveness of border control. The proposed research should also take account of the newly developed Vulnerability Assessment Methodology that foresees setting up a system of continuous scanning and annual baseline assessments. Proposals should be solution-oriented. Indicators should be helpful to relate external and internal security factors. Their fitness for purpose should be demonstrated.

- Sub-topic: [2018] Open

Proposals addressing other issues relevant to this challenge, based on a sound rationale, and supported by a large number of relevant practitioners are invited to apply under this sub-topic (see eligibility and admissibility conditions.)

Proposals should lead to solutions developed, tested and validated in compliance with European societal values, fundamental rights and applicable legislation including in the area of free movement of persons, privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be analysed in a comprehensive and thorough manner with a view to facilitating future acceptance of such solutions.

Proposals should pursue truly innovative approaches. They should be submitted by consortia also involving civil society organisations. Synergies are encouraged with the work for the knowledge centre on migration and demography set up by the Commission <https://ec.europa.eu/jrc/en/migration-and-demography>.

The Commission considers that proposals requesting a contribution from the EU of about EUR 5 million would allow this specific challenge to be addressed appropriately.

Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact:

- Knowledge and evidence-based support to policy developments, with fitness for purpose validated by policy-makers and by practitioners and in cooperation with civil-society organisations in the Member States, the Associated Countries, and abroad where appropriate.
- Methods to better manage the complexity (from reducing the incentives for irregular migration, to the analysis and sharing of best practices, and towards an effective application of common rules...) of the issues, with fitness for purpose validated by practitioners and civil-society organisations.
- Advances through the cross-fertilisation of concepts resulting from the collision of different ways of thinking and of different approaches developed by various partners in the proposals.

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-BES02-2018-2019-2020: Technologies to enhance border and external security

Specific Challenge: Innovation for border and external security may draw, in particular, from novel technologies, provided that they are affordable, accepted by citizens and customized and implemented for the needs of security practitioners.

Scope: Proposals are invited to address related research and innovation issues, in particular:

- Sub-topic 1: [2018] Providing integrated situational awareness and applying augmented reality to border security

Currently, information is made available to border and coast guards in several formats and on different kinds of hardly interoperable displays. However, human cognitive is limited at managing information from several sources simultaneously and at handling too many separate pieces of equipment is a limit to their ability to act. Furthermore, border and coast guards often work in sparsely populated and remote areas where the availability of telecommunication networks may be an issue. Research and innovation should lead towards (cloud-based) integrated systems with simple but complete and highly-standardized interfaces showing real-time information in a user-friendly way, that can assist border guards in decision-making, and in remaining in contact with their command and control centre in the actual context of operations. Water, land and air operating resources should be taken into account, to lead to enhanced concept of employment, integration and interoperability standards.

- Sub-topic 2: [2018] Detecting fraud, verifying document validity, and alternative technologies to identifying people

The use of counterfeit travel documents at borders is a reality, which entails the risk of not identifying known criminals, including terrorists. It is a cross-cutting priority according to EU SOCTA 2017, since it enables or enhances all types of serious and organized crime and terrorism. New countermeasures are needed to address potential frauds, in particular for the detection of morphed face images. The use of biometrics "on the fly" techniques for identification in a non-intrusive manner and without interrupting the flow of people is an area for further development, testing and validation.

- Sub-topic 3: [2019] Security on-board passenger ships

Security on-board passenger ships is challenging, given the larger number of specific constraints that apply. To ensure security all along the "life cycle" of a voyage, new technologies can be implemented (together with methods for their deployment and possibly their integration into ship systems), as well as security novel procedures (including for embarkation and disembarkation, mooring at pier, etc.)

- Sub-topic 4: [2019] Detecting threats in the stream of commerce without disrupting business

The flow of goods crossing borders is increasing, whilst ways of concealing methods for dangerous materials and illegally trafficked goods are improving. The detection of such dangerous and illegal goods should be facilitated by novel technologies and sensing strategies characterized by risk-based protection and non-intrusive security checks, that can be implemented without disrupting business.

Proposals should target the automation and integration of existing technologies for the purpose of identifying the largest possible amount of threat materials and ensuring the full supervision of the logistic flow of goods. This would require exploiting information obtained through the analysis of cargo flow data available from open source and documentary control, intelligence gathering, risk management, as well as through physical detection or inspection of cargo in means of transport, luggage, or carried by individuals. The fitness for purpose of novel solutions should be validated at the EU external border, in a context chosen on the basis of a sound and factual risk analysis.

Of particular relevance: the enhancement of detection capabilities of contraband (mainly cigarettes) hidden in high density cargo (coal, iron ore) in particular for rail cargo transport, and well as the fight against illicit trafficking of radioactive and nuclear (NR) materials (including through the establishment of trans-European network of detection facilities with its specific concept of operations).

- Sub-topic 5: [2020] Disruptive sensor technologies for border surveillance

Sensor technologies are critical in the context of border surveillance, including novel radar technologies, multispectral sensors, lidar sensors, acoustic sensors, electronic support

measures, etc. as well as their interoperability, miniaturization, integration and fusion at system-level and cross-cueing, and enabling operations under extreme atmospheric conditions.

- Sub-topic: [2018-2019-2020] Open

Proposals addressing other issues relevant to this challenge, based on a sound rationale and supported by a large number of relevant practitioners are invited to apply under this sub-topic (see eligibility and admissibility conditions.)

Proposals should lead to solutions developed, tested, and validated in compliance with European societal values, fundamental rights and applicable legislation, including in the area of free movement of persons, privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 4 to 6 – see General Annex G of the Horizon 2020 Work Programme.

The Commission considers that proposals requesting a contribution from the EU of about EUR 7 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Short term:

- Clear, realistic benchmarks against which to assess progress, so as to possibly stop the project if at mid-term review
- Plan to provide confidence in the take up of project results after the completion of the project

Medium term:

- Evidence based knowledge, and developments performing beyond the current state of the art and leading quickly to innovation
- Technical and operational guidelines, recommendations and best practices set in the EUROSUR handbook and in the future handbook for coast guards (as per Article 53 of the European Border and Coast Guard regulation.)

Long term:

- Implementation of solutions resulting from the legislative initiative in the "Smart Borders" package
- Implementation of actions of civilian nature identified in the EU Maritime Security Strategy action plan

Type of Action: Research and Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-BES03-EBCGA-2018-2019-2020: Demonstration of applied solutions to enhance border and external security¹⁰

Specific Challenge: Solutions at high Technological Readiness Levels (TRL; please see Annex G of the General Annexes) exist to enhance border and external security, but they need to be demonstrated in the context of actual operations or exercise for validation by practitioners, or to remain unused.

Part of Horizon 2020 activities related to border and external security for the period of 2018-2020 will be implemented by the European Border and Coast Guard Agency (EBCGA) in indirect management. The EBCGA will manage the phases of the project lifecycle in accordance with the procedures set out in the Horizon 2020 Rules for Participation, and with due regard of Article 37 of the EBCG Regulation. To this end a delegation agreement covering the 2018-2020 activities will be concluded between the Commission and the EBCGA, setting out in details the entrusted tasks and the arrangements ensuring the protection of the financial interests of the Union.

Scope: Consortia are invited to propose demonstration of high (6-8) Technology Readiness Levels (TRL) systems applied in the context of border and external security. (TRL: please see Annex G of the General Annexes.)

Proposals should be submitted under only one of the following sub-topics:

- Sub-topic 1: [2018] Remotely piloted aircrafts and underwater autonomous platforms to be used from on-board offshore patrol vessels

Remotely piloted autonomous platforms of all kinds should demonstrate innovative capacities for land border and coast surveillance. Underwater autonomous platforms are also of interest for choke points surveillance (i.e. a port entrance.)

Research on artificial intelligence is likely to facilitate the transition from innovation to operation. Such platforms play an important role in facilitating long range and persistent surveillance in wide maritime areas, complementing operation from offshore patrol vessels. Improving the cost effectiveness, reliability and availability of such platforms, either by increasing the performance of existing technologies or by developing innovative concepts of operation, would notably contribute to better situational awareness at the tactical level beyond coastal waters (up to 200 nautical miles), while reducing risks during search and rescue missions, including launch and recovery phases, even in adverse sea and wether conditions. Proposals should aim at improved cost effectiveness, in particular through the remote

¹⁰ This activity directly aimed at supporting pilot activities is excluded from the delegation to the Research Executive Agency and will be implemented by the European Border and Coast Guard Agency

operation of sensors mounted on aerial platforms (including optionally and remotely piloted) and by improving the on-board processing of payload data, while minimizing the data transmission to the ground segment.

- Sub-topic 2: [2019] New concepts for decision support and information systems

Information systems to support border and external security may combine a broad variety of data from very different sources, including personal data. Innovative solutions are needed to ensure the interoperability of surveillance systems, and the availability of information for maritime border surveillance coming from the area of operations in standardized formats, when and where it is needed, thus at enhancing situation awareness at strategic level (in National Coordination Centres), but also at tactical level (with assets deployed under the frame of surveillance operations). This would allow faster reaction to incidents in the maritime domain, and a reduction in the death toll at sea. Proposals should aim at optimize the exploitation of data for their specific use in surveillance is currently embryonic, and needs to take better account of the specific characteristics of the domain, with a view to provide the needed information reducing redundancies.

- Sub-topic 3: [2020] Improved systems for the detection, identification and tracking of small boats

The detection, identification and tracking of small boats is quite challenging since systems need to cover large maritime areas, and large numbers of small boats, whilst coping with the current limitations of sensors (radars and cameras) in terms of performance and traffic-discrimination capacities which make discriminating small boats travelling from one Schengen country to another from those travelling from or to outside a Schengen country quite difficult. Proposals should aim at innovative and interoperable solutions to improve border and coast surveillance, to enhance (maritime) situation awareness in (national) command and control centres, to track the boats' destinations, behaviour and purpose, and to detect possible illegal activities or to provide for improved capabilities in search and rescue.

- Sub-topic: [2018-2019-2020] Open

Proposals addressing other issues relevant to this challenge, based on a sound rationale and supported by a large number of relevant practitioners are invited to apply under this sub-topic (see eligibility and admissibility conditions.)

Proposals submitted under this topic should be coordinated by a competent authority under civilian authority and command, nationally identified as specialised border or coast guard, or border police force.

They should clearly demonstrate how they complement and do not overlap with actions undertaken in the Preparatory Action on Defence Research under topic *PADR-US-01-2017: Technological demonstrator for enhanced situational awareness in a naval environment*.

Certain operational costs are excluded from eligible costs (see eligibility and admissibility conditions.)

Proposals should lead to solutions developed in compliance with European societal values, including privacy and fundamental rights.

Proposals should lead to solutions developed in compliance with European societal values, fundamental rights and applicable legislation, including in the area of free movement of persons, privacy and protection of personal data.

The Commission considers that proposals requesting a contribution from the EU of about EUR 5 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Medium term:

- Innovative solutions validated and qualified in the real, operational environment of civilian missions, defined in detail according to specifications set by the practitioners (authorities in charge of border surveillance and coast guard functions) and tailored to effectively meet their requirements within civilian missions.
- Plans for the quick take up of qualified systems at EU level.
- Plans for transnational procurement strategies.

Long term:

- Improved cost-effectiveness and efficiency of systems for the prevention of cross border crime and for border surveillance for civilian purposes.
- Standards for interoperable systems.
- Substantial and tangible improvement of (maritime) situational awareness and reaction capability, as appropriate in surveillance for civilian purposes, fight against crime, and search and rescue missions by the National and European Border and Coast Guards.
- Contribution to the concept of Common Application of Surveillance Tools, as for the European Border Surveillance System (EUROSUR) and to its interoperability with other systems.

Type of Action: Innovation action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

General Matters

Proposals are invited against the following topic(s):

SU-GM01-2018-2019-2020: Pan-European networks of practitioners and other actors in the field of security¹¹

Specific Challenge: In Europe, practitioners interested in the uptake of security research and innovation are dedicated to performing their duty and are focused on their tasks. In general, however, practitioner organisations have little scope to free workforces from daily operations in order to allocate time and resources to monitor innovation and research that could be useful to them. They have few opportunities to interact with academia or with industry on such issues. All stakeholders – public services, industry, academia – including those who participate in the Security Advisory Group, recognize this as an issue.

Scope: Practitioners are invited to associate in 4 different categories of networks in the field security:

a. [2019-2020] Practitioners (end-users) in the same discipline and from across Europe are invited to get together: 1) to monitor research and innovation projects with a view to recommending the uptake or the industrialisation of results, 2) to express common requirements as regards innovations that could fill capability and other gaps and improve their future performance, and 3) to indicate priorities as regards areas requiring more standardisation. Opinions expressed and reported by the networks of practitioners should be checked against what can be reasonably expected, and according to which timetable, from providers of innovative solutions. In 2019, proposals are invited in two specific areas of specialisation: the protection of public figures; the handling of hybrid threats.

b. [2018] Innovation clusters from around Europe (established at national, regional or local level), especially those managing **demonstration sites, testing workbenches, and training facilities** (including those providing simulators, serious gaming platforms, testing of PPDR applications on broadband networks) are invited to establish one network 1) to establish and maintain a roster of capabilities and facilities, 2) to organise to share expertise, 3) plan to pool and share resources with a view to facilitating access to their respective facilities among collective membership when this would constitute an economy of scale and allow a more intensive use of expensive equipment, and 4) to coordinate future developments and workbenches' acquisition.

c. [2018] Procurement agencies, or departments, active at budgeting and implementing the acquisition of security solutions at European, national, regional or local level can get together: 1) to share investment plans, 2) to compare procurement techniques and rules, and 3) to plan for common procurements of research services as well as of innovative, off-the-shelf products.

d. [2019] Border and coast guard organisations, procurement authorities, industry and researchers are invited to join forces and draft the roadmaps necessary to provide innovative,

¹¹ This activity directly aimed at supporting the development and implementation of evidence base for R&I policies and supporting various groups of stakeholders is excluded from the delegation to the Research Executive Agency and will be implemented by the Commission services.

future solutions for border and coast surveillance, control and management, in the context of integrated border management and "dematerialised" borders. Whilst practitioners need to be in the lead for expressing requirements, the largest number of (national) research organisations and industry participants should also be involved in the consortium. The management of EU borders requires more interoperability among systems in order to improve capabilities. Industry is not encouraged to invest in innovation given the small size of national markets and national authorities hesitate to invest in innovative solutions not knowing the intentions of their neighbours and of other countries. A roadmap is required for border and coast guard authorities, and industry, to plan ahead and to facilitate future investments into common, interoperable solutions and systems. The roadmap should cover foresight activities, and take account of current and future relevant budget trends in the Member States and the EU.

The Commission considers that proposals requesting a contribution from the EU of:

- about EUR 3.5 million per action for a duration of 5 years (recommended duration) for Parts a), b) and d);
- about EUR 1.5 million per action for a duration of 5 years (recommended duration) for Part c)

would allow for this topic to be addressed appropriately. Nonetheless this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Medium term:

- Common understanding of innovation potential, more widely accepted understanding, expression of common innovation and standardization needs among practitioners in the same discipline.
- Greater involvement from public procurement bodies upstream in the innovation cycle.
- More efficient use of investments made across Europe in demonstration, testing, and training facilities.

Long term:

- Synergies with already established European, national and sub-national networks of practitioners, even if these networks are for the time being only dedicated to aspects of practitioners' work unrelated to research and innovation (in general, to the coordination of their operations).

Type of Action: Coordination and support action

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-GM02-2018-2020: Strategic pre-commercial procurements of innovative, advanced systems to support security¹²

Specific Challenge: Innovative solutions must support the European Union when national resources are required to work more closely together.

Scope:

- Sub-topic 1: [2018] Common requirements specifications for innovative, advanced systems to support security

Practitioners from several countries are invited to work on common requirements of any kind of system that they may need in the future to enhance border and external security, to fight against crime and terrorism, to protect infrastructure, or to make societies more resilient, and to involve their respective procurement bodies in preparing for future acquisitions.

To ensure that the outcome of this action becomes also available to EU Member State national authorities as well as EU agencies not participating for further procurement purposes, proposals must necessarily state:

(1). Agreement from participating procurement authorities to negotiate, in good faith and on a case-by-case basis, with non-participating procurement authorities that wish to procure a capability or a product fully or partly derived from this action, the use of the information required to run such a procurement process, and solely for that purpose.

(2). Commitment from participating procurement authorities to consult with any legal entity generating information to be released for the purpose set out in paragraph (1), unless contrary to applicable legislation.

(3). Commitment from participating procurement authorities to negotiate the use granted under paragraph (1) on Fair Reasonable and Non-Discriminatory (FRAND) terms.

The following options of the Model Grant Agreement will be implemented:

- Options on additional exploitation obligations of Article 28.1 of the Model Grant Agreement will be applied.

- *Grants awarded under this topic will be complementary to the grant agreement under Sub-topic 2 of this Topic. The respective options of Article 2, and Article 41.4 of the Model Grant Agreement¹³ will be applied.*

A subset of the domains addressed by the proposals selected for funding by the Commission further to this Call will be continued with pre-commercial procurement activities in 2020.

¹² This activity directly aimed at supporting the development and implementation of evidence base for R&I policies and supporting various groups of stakeholders, and public-public partnerships with Member States and associated countries is excluded from the delegation to the Research Executive Agency and will be implemented by the Commission services.

¹³ http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/amga/h2020-amga_en.pdf

- The Commission considers that proposals requesting a contribution from the EU of about EUR 1 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts. Sub-topic 2: [2020] Procurement of prototype systems among those specified as a result of Sub-topic 1

Practitioners from several countries are invited to proceed with pre-commercial procurements based on common requirements resulting from activities financed under Sub-topic 1 of this Topic, which will be made available on due time.

Phase 1: To finalise the tenders packages for calls for tenders to build security-relevant prototypes based on the technical input to tender packages resulting from Sub-topic 1 of this Topic. To establish methods suitable for the validation of these prototypes across Europe;

Phase 2: To implement the calls for tenders to generate 2 prototypes from 2 different sources;

Phase 3: To benchmark and validate the 2 prototypes against the methods developed during Phase 1;

Phase 4: To draft a curriculum for pan European training in using the prototypes.

To ensure that the outcome of this action becomes also available to EU Member State national authorities as well as EU agencies not participating for further procurement purposes, the proposal must necessarily state:

(1). Agreement from participating procurement authorities to negotiate, in good faith and on a case-by-case basis, with non-participating procurement authorities that wish to procure a capability or a product fully or partly derived from this action, the use of the information required to run such a procurement process, and solely for that purpose.

(2). Commitment from participating procurement authorities to consult with any legal entity generating information to be released for the purpose set out in paragraph (1), unless contrary to applicable legislation.

(3). Commitment from participating procurement authorities to negotiate the use granted under paragraph (1) on Fair Reasonable and Non-Discriminatory (FRAND) terms.

The following options of the Model Grant Agreement will be implemented:

- Options on additional exploitation obligations of Article 28.1 of the Model Grant Agreement will be applied.

- *Grants awarded under this topic will be complementary to a grant agreement under Sub-topic 1 of this Topic. The respective options of Article 2, and Article 41.4 of the Model Grant Agreement¹⁴ will be applied.*

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 8 – see General Annex G of the Horizon 2020 Work Programme.

¹⁴ http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/amga/h2020-amga_en.pdf

Proposals should lead to solutions developed in compliance with European societal values, fundamental rights and applicable legislation, including in the area of free movement of persons, privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner.

- The Commission considers that proposals requesting a contribution from the EU of between EUR 2 to 12 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts. In both sub-topics, proposals should lead to solutions developed in compliance with European societal values, fundamental rights and applicable legislation, including in the area of free movement of persons, privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner. All participating procurement authorities should also commit to comply with EU data protection legislation in the development of innovative, advanced systems to support security and in particular the principles of data protection by design and by default.

Expected Impact: Short term:

- Common requirements for innovative prototypes agreed among the practitioner organisations involved in the action
- Technical tender documents ready for use by subsequent pre-commercial procurement actions, as well as by non-participating procurement authorities

Type of Action: Coordination and support action, COFUND (PCP)

The conditions related to this topic are provided at the end of this call and in the General Annexes.

SU-GM03-2018-2019-2020: Pre-commercial procurements of innovative solutions to enhance security

Specific Challenge: Innovative solutions must support the European Union when its national resources are required to work more closely together when engaged in actions to improve security.

Scope: Practitioners from several countries are invited to proceed with the procurement of innovative solutions to enhance their operational capability.

Phase 0: To draft common requirements for innovative prototypes, agreed among the practitioner organisations involved in the action, and to prepare the technical tender documents ready for use in the subsequent phase of the action;

Phase 1: To prepare a full tenders package for calls for tenders to build security-relevant prototypes based on the technical input resulting from Phase 0; to prepare for the validation of the future prototypes;

Phase 2: To implement the calls for tenders to generate 2 prototypes from 2 different sources;

Phase 3: To benchmark and validate the 2 prototypes against the method developed during Phase 1;

Phase 4: To draft a curriculum for pan European training in using the prototypes.

The centre of gravity for technology development with actions funded under this topic is expected to be up to TRL 8 – see General Annex G of the Horizon 2020 Work Programme.

Solutions are to be developed in compliance with European societal values, including privacy issues and fundamental rights. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be taken into account in a comprehensive and thorough manner.

Solutions are to be developed in compliance with European societal values, fundamental rights and applicable legislation, including in the area of free movement of persons, privacy and protection of personal data. Societal aspects (e.g. perception of security, possible side effects of technological solutions, societal resilience) have to be addressed in a comprehensive and thorough manner. All participating procurement authorities should also commit to comply with EU data protection legislation in the development of innovative, advanced systems to support security and in particular the principles of data protection by design and by default.

The Commission considers that proposals requesting a contribution from the EU of between EUR 2 to 12 million would allow this specific challenge to be addressed appropriately. Nonetheless, this does not preclude submission and selection of proposals requesting other amounts.

Expected Impact: Short term:

- Pre-commercial prototypes matching requirements common to many Member States, and available from 2 different sources for further industrialisation.
- High leveraging effect of the EU contribution to the action.

Type of Action: COFUND (PCP)

The conditions related to this topic are provided at the end of this call and in the General Annexes.

Conditions for the Call - Security

Opening date(s), deadline(s), indicative budget(s):

Overall indicative budget	130.00	140.00	163.00	

Indicative timetable for evaluation and grant agreement signature:

For single stage procedure:

- Information on the outcome of the evaluation: Maximum 5 months from the final date for submission; and
- Indicative date for the signing of grant agreements: Maximum 8 months from the final date for submission.

Exceptional funding rates:

*Horizon 2020 -
Secure societies - Protecting freedom and security of Europe and its citizens*

SU-BES03-EBCGA-2018-2019-2020	Cost of fuel is excluded from the costs eligible under the grant agreements implementing this topic
SU-GM02-2018-2020	In the Sub-topic called for in 2020 (Sub-topic 2), the funding rate for actions under this topic is limited to 90% of the total eligible costs.
SU-GM03-2018-2019-2020	Given the broad openness of the topic, the amount invested by the buyers contributes to demonstrate their commitment and the interest in the outcome of the action. The funding rate for actions under this topic is therefore limited to 70% of the total eligible costs. The applicants may request a lower funding rate, so as to increase the leveraging effect of the EU contribution to the action.

Eligibility and admissibility conditions: The conditions are described in General Annexes B and C of the work programme.. The following exceptions apply:

SU-DRS01-2018-2019-2020	This topic requires the active involvement of at least 3 first responders' organisations or agencies from at least 3 different EU or Associated countries.
SU-DRS02-2018-2019-2020, SU-DRS03-2018-2019-2020	Predefined sub-topics require the active involvement of at least 3 agencies or first responders' organisations from at least 3 different EU or Associated countries. Where applicable, Sub-topic: Open requires the active involvement of at least 5 such organisations, from at least 5 different EU or Associated countries.
SU-DRS04-2019-2020	Each RIA must establish its standard consortium agreement, as well as a "Collaboration Agreement" with participant(s) in the ENCIRCLE consortium. A draft of the "Collaboration Agreement" must be attached to the RIA proposal, and endorsed by at least one participant in ENCIRCLE. All beneficiaries of the RIA grant agreements must be independent from each beneficiary in the ENCIRCLE consortium. Each RIA proposal must be coordinated by an SME.
SU-DRS05-2019	This topic requires the active involvement of organizations in charge of national planning in relations with pandemics preparedness, from at least 5 different EU or Associated

DRAFT

Call - Digital Security

[...]

DRAFT

Other actions

1. Reviews of projects

This action will support the use of appointed independent experts for the monitoring of running projects, where appropriate, through Expert Contracts

Type of Action: Expert Contracts

Indicative timetable:

Indicative budget: EUR 0.89 million from the 2018 budget(Review of projects) and EUR 0.74 million from the 2019 budget(Review of projects) and EUR 0.62 million from the 2020 budget(Review of projects)

2. Workshops, conferences, experts, communication activities, studies

- Organisation of an annual Security Research event.
- Support to workshops, communications activities, or studies. Workshops are planned to be organised on various topics to involve end users; preparation of information and communication materials, etc.
- Experts assisting with the design and implementation of the actions, and to fine-tune the 2020 work programme. A special allowance of EUR 450/day will be paid to the expert appointed in their personal capacity who acts independently and in the public interest.
- Support to cybersecurity events; socio-economic studies, impact analysis studies and studies to support the monitoring, evaluation and strategy definition for cybersecurity and digital privacy policy.

Type of Action: Public Procurement - null

Indicative timetable:

Indicative budget: EUR 2.50 million from the 2018 budget(Workshops, etc.) and EUR 2.50 million from the 2019 budget(Workshops, etc.) and EUR 2.50 million from the 2020 budget(Workshops, etc.)

3. Space Surveillance and Tracking

Support to security aspects of Space Surveillance and Tracking.

Type of Action: Specific Grant Agreement

Indicative timetable:

Indicative budget: EUR 1.50 million from the 2018 budget(Space Surveillance and Tracking) and EUR 1.00 million from the 2019 budget(Space Surveillance and Tracking) and EUR 0.50 million from the 2020 budget(Space Surveillance and Tracking)

4. Pre-standardisation mechanisms for security

Support to a consortium comprising CEN (coordinator) and CENELEC in cooperation with ETSI, as well as the JRC as the current ERNCIP coordinator, to address how to achieve timely standardization in the field of security, including through structural changes.

Pre-standardisation and standardisation processes as currently in place in the fields of security and civil protection are not considered satisfactory, whilst many of their components are very valuable: the JRC produces interesting pre-standards in cooperation with a broader research community; CEN/CENELEC and ETSI produce solid standards with the very active involvement of industry. However: both sets of activities are not very agile; and they do not interface optimally.

These organizations are invited to propose mechanisms and novel ways of working and organizing themselves, towards the establishment of standardisation processes in the field of security that build upon the strength of the various processes in place, and increase their effectiveness, speed and efficiency.

Legal entities:

Coordinator: European Committee for Standardization (CEN) - Brussels (Belgium)

European Committee for Electrotechnical Standardization (CENELEC) - Brussels (Belgium)

European Telecommunications Standards Institute (ETSI).- Valbonne (France)

Joint Research Centre - Ispra (Italy)

This grant will be awarded without call for proposals in line with Article 190(1)(e) of the Rules of applications of Regulation (EU, Euratom) 966/2012, Regulation No 1268/2012 and Article 11(2) of the Rules for participation and dissemination in "Horizon 2020 - the Framework Programme for Research and Innovation (2014-2020)", Regulation (EU) No 1290/2013.

Type of Action: Grants to identified beneficiaries

Indicative timetable:

Indicative budget: EUR 0.90 million from the 2018 budget(Pre-standardisation mechanisms)

CALLS and OTHER ACTIONS for 2020

Call - Protecting the infrastructure of Europe and the people in the European smart cities

H2020-SU-INFRA-2018-2019-2020

footnote: This is the continuation of of a call for which information is provided in the first section of this work programme part.

Topic

- Prevention, detection, response and mitigation of combined physical and cyber threats to critical infrastructure in Europe [continued]

Call - Security

H2020-SU-SEC-2018-2019-2020

footnote: This is the continuation of of a call for which information is provided in the first section of this work programme part.

Topics

- Human factors, and social, societal, and organisational aspects for disaster-resilient societies [continued]

- Technologies for first responders [continued]

- Pre-normative research and demonstration for disaster-resilient societies [continued]

- Chemical, biological, radiological and nuclear (CBRN) cluster [continued]

- Human factors, and social, societal, and organisational aspects in fighting against crime and terrorism [continued]

- Technologies to enhance the fight against crime and terrorism [continued]

- Information and data stream management to fight against (cyber)crime and terrorism [continued]

- Explosives: detection, intelligence, forensics

- Human factors, and social, societal, and organisational aspects of border and external security [continued]

- Technologies to enhance of border and external security [continued]

- Demonstration of applied solutions to enhance border and external security [continued]

- Pan-European networks of practitioners and other actors in the field of security [continued]
- Strategic pre-commercial procurements of innovative, advanced systems to support security [continued]
- Pre-commercial procurements of innovative solutions to enhance security [continued]
