

# UT TRAIN MAP

GUIDE FOR SUSTAINABLE TRAVEL

## UT TRAIN MAP EUROPE

Are you travelling for study, work – or just to visit new places? Do you want to travel comfortably, but limit your impact on the environment as much as possible?

This map shows what destinations can easily be reached by train instead of airplane – and how much CO<sub>2</sub> you save by choosing this option. The University of Twente encourages train travel and considers the train the default mode of travel for all blue coloured destinations.

Click on the city you want to travel to see a comparison of the travel time, number of transfers and CO<sub>2</sub>-emissions for train, airplane, E-car and car.

Interested to know more about sustainability and sustainable mobility@UT, check out the [sustainability website](#) and the [mobility page](#).

**UNIVERSITY OF TWENTE.**

## DISCLAIMER

### LEGEND

-  Blue = The train is the default mode of travel to these cities
-  Green = The train is the recommended mode of travel to these cities
-  Yellow = The train is a challenging mode of travel to these cities

## ABOUT THE TRAIN MAP

Commuting and business travel together cause around 64% of the CO<sub>2</sub>-footprint of the University of Twente. Therefore, mobility is one of the priority areas to focus on for improving the sustainability of our organisation. The Train Map was developed as an easy-to-use guide to help members of our community reduce their footprint through travelling by train instead of flying.

The map shows the cities that members of the UT community regularly travel to. These cities are divided into three categories; cities where UT considers the train the default mode of travel, cities where the train is recommended, and cities where the train is considered a challenging option. The criteria for these options are detailed below.

The cities on the map are selected based on the number of times a work trip was booked through the University of Twente's travel agency, including locations where the UT has a partner institution (Erasmus, ECIU, CESAER, etc.). This list is not meant to be exhaustive, but it aims to give a good overview which locations you can reach by train.

## CATEGORIES

Cities are categorized into three markers, based on the ease of travel to that city by train, according to the following criteria:

Train is the **default** mode of travel (blue marker):

- Travel distance is 800km maximum
- Travel duration is 8 hours maximum
- 3 train transfers maximum

Train is the **recommended** (green marker)

- Travel time by train is 12 hours maximum
- 4 train transfers maximum

Train is **challenging** (yellow marker)

- Train travel time is more than 12 hours

Some cities may be placed in a different category based on other considerations, for example, if it takes a little over 8 hours by train to reach a city but the train is still just as fast or faster than the plane, it will be placed in the blue category (example: Nantes). If there is a particularly good night train connection to a city, it will be placed in the green category even if the journey takes more than 12 hours (example: Vienna).

## CALCULATION OF TRAVEL DURATION AND EMISSIONS

The calculated travel duration and carbon emissions takes into consideration the aspects below:

- The CO<sub>2</sub> emissions in this document are calculated with [www.ecopassenger.org](http://www.ecopassenger.org), an online tool that compares the energy consumption, CO<sub>2</sub>, and exhaust atmospheric emissions for planes, cars, and trains for passenger transport.
- The methodology of Ecopassenger to calculate emissions is based on internationally-accepted, evidence-based standards. For more information, please see the [Ecopassenger Methodology Report](#).
- The fastest option is visualized for all travel options, with a "sustainable" indicator for the least emitting transport method.
- Travel time is based on travel from the centre of Enschede to the centre of the destination city (station to station).
- It is assumed flights are taken from Schipol Airport and that travel to

Schipol is by train. Therefore, 2 hours of travel time to Schipol Airport is taken into account.

- For plane travel, check-in, security, and luggage drop-off and retrieval at Schipol Airport and the destination airport are taken into account. Therefore, 2.5 hours of extra travel time is added.
- Effective working time is considered zero for plane travel as opposed to on a train, due to lack of space on a plane and often more uncomfortable situations. Effective working time is considered zero for plane travel because of regular interruptions due to boarding, taking off, landing procedures, and lack of physical working space.
- The number of transfers includes transfers from train to plane and from plane to train, car or taxi at the destination city.
- The travel duration and number of transfer information for each mode of transport is obtained from various travel resources such as [NS International](#), [Deutsche Bahn](#), [Google Maps](#), and the [Trainline](#).
- Duration of travel by car and electric assume that the journey is non-stop, which does not include rest and recharging/refueling time. This allows the user to determine their own car travel duration time based on the given indication and their driving habits.
- All travel times and emissions are an indication: they may differ based on the day, time of travel, and the exact route.
- Electric vehicle carbon emissions are based on the electricity mix of geographic locations. Depending on the route, the electricity used to charge the battery comes from different sources which effects carbon emissions. For example, the Polish electricity mix contains more non-renewable resources than the Norwegian electricity mix. However, regional energy mixes may have improved, since publishing this map which in reality would result in lower CO<sub>2</sub> emissions when driving electrically.

This map is created using static data that is updated periodically. Therefore, changes in connections may occur over time. If you have any remarks or questions about this train map, please send an email to [sustainability@utwente.nl](mailto:sustainability@utwente.nl).

## YOUR EXPERIENCE AND FEEDBACK

We are always open to feedback about the UT Train Map and are curious about your experiences with international train travel. Do you have remarks or questions for us? Or ideas on how UT can improve your international trips? Please send an email to [sustainability@utwente.nl](mailto:sustainability@utwente.nl).
