

# PROCESS TECHNOLOGY FOR PROFESSIONALS

UNIVERSITY OF TWENTE.

## PROCESS TECHNOLOGY PROGRAMME

DEVELOP FURTHER IN YOUR CAREER IN THE  
PROCESS INDUSTRY

*Are you working in the process engineering industry? And are you in possession of a higher professional education diploma which you would like to upgrade or do you lack specific knowledge about process technology? The new Process Technology Programme offers you an opportunity to gain new knowledge and skills, with which you can further develop your career.*

## WHY IS THIS PROGRAMME FOR YOU?

An academic education is a requirement for many important positions in the process engineering industry. Professionals with a higher professional education diploma (HBO) or bachelor degree sometimes lack knowledge in specific subjects related to process technology.

The faculty of Science and Technology at University of Twente has extensive experience in training professionals in the field of process technology. For more than 40 years, more than 500 participants have successfully completed the basic Process Technology Course and 250 more have followed up with the advanced course. The programme is now redesigned to meet new requirements and to contribute to your professional development.

## STRUCTURE OF THE PROGRAMME

The Process Technology Programme offers three courses. The Basic Course transcends the bachelor level of the applied universities and offers a solid theoretical basis for process technology. This Basic Course covers all subjects necessary to follow the advanced courses in separation processes, reactor engineering, process design and control. The subsequent two courses, the Advanced Course and the Design Course connect the theory with the practice of process technology.

After completing these three courses, you can extend the programme to a full

master's diploma. For more information, you can check out the programme structure and the courses and modules.

## HIGHLIGHTS OF THE PROGRAMME

- It's **flexible** with a blended learning approach. A combination of online and face-to-face learning. It's a great method for professionals to combine their work and personal life with an academic education.
- It features **individual support**. There are many opportunities to ask questions, to discuss difficult issues and to address individual needs.
- It offers opportunities to **build your network**. We will help you to create a community to learn together and share experiences.
