

# EXAMINATION IN THE NEW BMT CURRICULUM: TYPICAL EXAMPLES

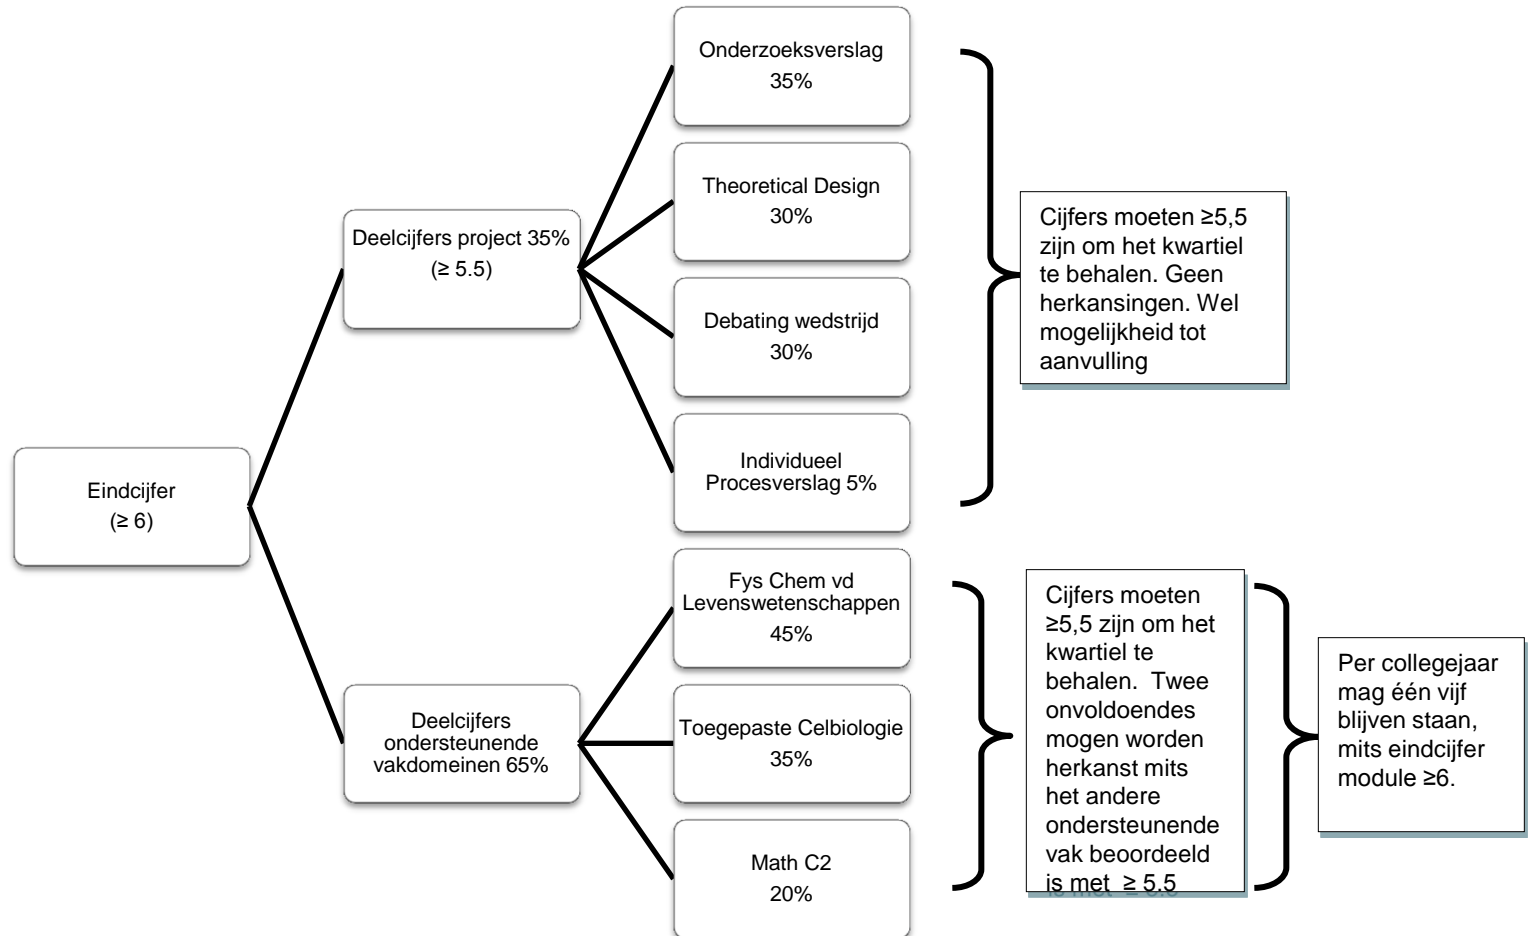

DR. JANNEKE ALERS LECTURER AND QUARTILE COORDINATOR K2 & K5

# K5 Creating Biological Tissues

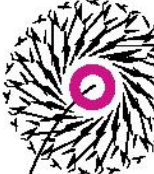

# Example: Examination in K5

# DO's

---

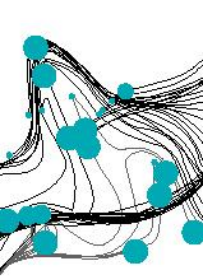

- 
- Be crystal clear about the examination rules incl. re-sits BEFORE you start your new curriculum
  - Spread the examinations and project mile stones: don't let it all add up in the last week of the quartile
  - Be consistent in tutor grading of plan of investigation and individual reflection
  - Feedback on project is of imminent importance
  - Registration of which students still participate in the modules is important!
  - Develop policy for students with special needs in advance
  - Provide useful and hands on information to lecturers about the implications of project education and the module system
- 

# DON'Ts

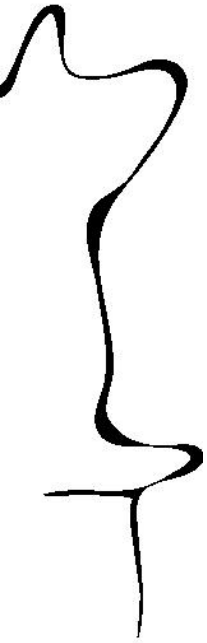

---

- Don't change the rules of examination during the curriculum
- Don't use Grade center in Blackboard
- Don't organize re-exams in the summer for other courses than K4

## KEEP IN MIND THAT

---

- Project EC is not a regular course EC → weight factors vs EC's
- Be aware of 'hitchhike- effect' in large project groups (>5 students)
- Grading and providing feedback by GROUPS of lecturers takes A LOT OF TIME → change in attitude → planning!
- Problems mark registration in Osiris still exist
- Registration exams (via Blackboard/Osiris/not at all) is still problematic but improving. Cave students with special needs. Surveillance during exam etc.

# DILEMMA's

---

- Everyone passes project → need for more individual grading
- Marks for different projects differ significantly during B1
- Grading in Osiris problematic → accurate administration KWACO necessary
- What to do with students that have not completed project?
- Sequence of modules is not per se sequence of necessary preknowledge → cave study delay
- Comparison results/participation exams sometimes difficult due to students that exit the program within the quartile.
- How to combine module grade with BSA?
